## Application for Milk Handling Equipment and Facility Construction

Mail To: WDATCP 3610 Oakwood Hills Parkway, Eau Claire WI 54701  
 Make Checks Payable To: WDATCP

- Wisconsin regulations requires the installer, on behalf of the producer, to submit a plan for review prior to installation of a bulk tank or milking and milk handling system OR construction of or modification to a milkhouse, milking parlor or dairy farm water system.
- Only plans that are complete and legible will be reviewed.
- The fee of \$25 must accompany this form or plans will be returned for milking and milk handling systems.
- The review of your plan and /or application is based on Wisconsin regulations and standards in effect at this time.
- Modification of this installation may be required at some future date as regulations and standards are updated.

## Supplemental Application for Direct Tanker Milking Operations

Please Mail To: WDATCP P.O. Box 8911 Madison, WI 53708-8911

- The Department requires the installer, on behalf of the milk producer, to submit this supplemental application whenever a mobile tanker will be used to store milk on the farm.
- This form must be submitted in conjunction with the "Application for Milk Handling Equipment", (F-FD-31).
- Only plans that are complete and legible will be reviewed.
- Coordinate the completion of this form between the installer, producer, milk hauler, and dairy plant to assure accurate information is provided.
- Refer to F-fd-71 "Direct Tanker Shipping from the Farm Requirements" document for guidance.
- The review of your plan and /or application is based on Wisconsin regulations and standards in effect at this time.
- Modification of this installation may be required at some future date as regulations and standards are updated.

Please Print Clearly and Check Spelling

### INSTRUCTIONS

Complete all blanks applicable to this installation. This application must be accompanied by a detailed legible drawing of all the components pertaining to the Direct Ship. Use the numbers below and the numbers from the "Application for Milk Handling Equipment and Facility Construction" F-fd-31 to identify all components.

21. Cooling Media Sample Port	27. Sanitizing Station
22. Tanker Valve Drip Pan	28. Check Valve(s)
23. Indicating Thermometer	29. Milk Transfer Hose(s)
24. Recording Thermometer Probe	30. Drip Sampler
25. Recording Device	31. Milk Line Air Blow Fitting
26. Tanker Dock Seal(s)	32. Hard Surfaced Tanker Pad

Division of Food Safety 608-224-4700

**AUTOMATIC MILKING INSTALLATION (AMI)  
SUPPLEMENTAL APPLICATION**

Attach this form and all supporting documents to F-fd-31 when submitting.

This application allows the filer to explain how the proposed installation complies with Appendix Q of the Grade "A" PMO and current department rules. Please attach plans showing locations of AMIs, plumbing devices, milk storage, ventilation, lighting and milk handling equipment along with operator and livestock traffic flow. Attach diagrams and testing procedures of all isolation valves. Note: for additional information refer to the Appendix Q of the PMO.

**ITEM 1. ABNORMAL MILK**

Describe the method of separating animals that are producing milk with abnormalities or animals treated with antibiotics. See Item 14 for proper separation and cleaning of milking equipment in contact with abnormal or antibiotic treated milk.

**ITEM 2. MILKING BARN, STABLE OR PARLOR - CONSTRUCTION**

Provide a wall, floor, ceiling schedule for the AMI milking room. Describe the method of clean access for inspection and maintenance personnel.

**ITEM 3. MILKING BARN, STABLE OR PARLOR – CLEANLINESS**

Describe the method and frequency for cleaning the AMI milker box and surrounding area.

**ITEM 9. UTENSILS AND EQUIPMENT – CONSTRUCTION**

Provide documentation on any prototype equipment used for the AMI. All milking equipment shall meet the sanitary construction in respect to fit and finish.

**ITEM 10 & 11. UTENSILS AND EQUIPMENT – CLEANING AND SANITIZATION**

Provide the method and cleaning/sanitization frequency of the AMI.

**ITEM 12. UTENSILS AND EQUIPMENT – STORAGE**

Provide documentation of the AMI positive air ventilation system, to include air source, air filtration (if any) and system operating criteria.

**ITEM 13. MILKING - FLANKS, UDDERS AND TEATS**

Provide documentation of the National Conference on Interstate Milk Shipments (NCIMS) M-I Memoranda of acceptance for the teat prepping system.

**ITEM 14. PROTECTION FROM CONTAMINATION**

Provide information regarding the separation between cleaning/sanitizing solutions and milk intended for sale and between milk with abnormalities and milk intended for sale. If an inter-wired block-bleed-block fail-safe valve system is used, provide documentation and testing protocols.

**ITEM 18. RAW MILK COOLING**

For AMIs the raw milk must be cooled following current standards. Explain the milk cooling and storage process.

## WISCONSIN REQUIREMENTS FOR MILKING EQUIPMENT PLANS

Wisconsin Department of Agriculture  
Trade and Consumer Protection  
Division of Food Safety

Plans are required and must be submitted to DATCP – Division of Food Safety and be reviewed prior to installing. All installation, modification or replacements shall meet applicable requirements.

### **Applications that require a \$25.00 fee:**

- ◆ Pipeline System Installation (new or used systems)
- ◆ Milk pre-cooling equipment (new or used)
- ◆ Direct Tanker Milking Operations
- ◆ Pipeline Systems or Components, if the modification or replacement changes any of the following:
  - Size of milking line or main vacuum line
  - Length of milking line
  - Size of number of receiver jar inlets
  - Number of pipeline slopes
  - Number of milker units
  - Number of milker units per milk line slope
  - CFM of vacuum needed
  - Size of vacuum pump if CFM is less than previously installed
  - Utilization of direct tanker shipment of milk

### **No fee required.**

- ◆ Milkhouse, new or modifications
- ◆ Milking Parlors, new or modifications
- ◆ Water Systems, improvements to milkhouse, pipeline, and parlor.
- ◆ Bulk Tank Installation (new or used tanks)

NOTE: Immediately after installing or modifying any system listed above, the installer shall provide to the milk producer and the Department a signed written statement certifying compliance with the construction standards of ATCP 60, Wisconsin Administrative Code.

<b>CERTIFICATION OF COMPLETION</b>	
INSTALLER MUST SIGN THIS STATEMENT UPON COMPLETING INSTALLATION	
INSTALLER SHALL Mail copy to producer and a copy to DATCP, Division of Food Safety, PO Box 8911 Madison WI 53708	
PRODUCER SHALL BE POSTED WITH INSPECTION REPORTS IN MILK HOUSE FOR 12 MONTHS	
PRODUCER:

# Automatic Milking Installations

## 2010 Question

- Q. How many robotic milking systems are currently installed in Wisconsin?
  - A. The division has received 18 applications, with some applications installing more than one robotic milking system.
- Update:
  - 39 applications have been processed, effective 2-13-12.

# AMI

- Completed Application
- Appendix Q – Currently Available PMO
  - Supplemental Application
- Current System Drawings
- Current Building Drawings
- Valve Function Testing Protocol
- Other

## **APPENDIX Q. OPERATION OF AUTOMATIC MILKING INSTALLATIONS FOR THE PRODUCTION OF GRADE "A" RAW MILK FOR PASTEURIZATION**

This Appendix is intended to clarify how AMIs are to perform to be considered in compliance with the *Grade "A" PMO*. It is formatted to follow the Items as outlined in Section 7. **STANDARDS FOR GRADE "A" RAW MILK FOR PASTEURIZATION, ULTRA-PASTEURIZATION OR ASEPTIC PROCESSING.** Both requirements and recommendations are discussed.

### **ITEM 1r. ABNORMAL MILK**

AMIs shall have the capability to identify and discard milk from animals that are producing milk with abnormalities. Odor is currently evaluated on a bulk tank basis and should be no different for a herd using AMI technology.

Animals producing milk with abnormalities shall be diverted to a holding pen to be milked immediately prior to the system being cleaned and sanitized, or the animal(s) are identified through an appropriate identification system so that their milk will be automatically excluded from the milk offered for sale, provided that the parts of the milking system that came into contact with the milk with abnormalities are immediately cleaned and sanitized.

### **ITEM 2r. MILKING BARN, STABLE OR PARLOR - CONSTRUCTION**

The AMI milker box shall be treated the same as any other parlor. The goal is a clean environment in which to milk animals. All ventilation air must come from outside the cattle housing area. It is recommended that the AMI be located to provide clean access for personnel.

### **ITEM 3r. MILKING BARN, STABLE OR PARLOR – CLEANLINESS**

The AMI milker box shall be kept as clean as any milking and equipment cleaning area. It is recommended that the milking platform be regularly flushed with water to remove any manure that may have accumulated.

### **ITEM 9r. UTENSILS AND EQUIPMENT - CONSTRUCTION**

AMIs are the same as any other milking system from a sanitary construction standpoint and shall meet the same standards as a conventional milking system in respect to fit and finish of the milk contact surfaces.

### **ITEM 10r. UTENSILS AND EQUIPMENT – CLEANING**

AMIs are a continuous milking system and shall be shut down to clean at an interval sufficient to prevent the milking system from building up with soils. It is recommended that this interval not to exceed 8 hours.

#### **ITEM 11r. UTENSILS AND EQUIPMENT – SANITIZATION**

AMIs shall be sanitized after each cleaning and/or before each use, as is the case with any other milking system.

#### **ITEM 12r. UTENSILS AND EQUIPMENT – STORAGE**

AMIs shall have positive air ventilation systems in operation whenever the system is cleaning. The air for this system must come from outside the cattle housing area and should be as clean and dry as practical. This positive air system may also need to run during milking if needed to minimize odor, moisture and/or for pest control.

#### **ITEM 13r. MILKING - FLANKS, UDDERS AND TEATS**

AMI manufacturers shall submit data to FDA to show that the teat prepping system employed in their system is equivalent to Item 13r. Administrative Procedures #4: "Teats shall be treated with a sanitizing solution just prior to the time of milking and shall be dry before milking." Each installer shall provide the producer and the Regulatory Agency with a copy of this approval, including a detailed description of the approved procedure. Each producer shall keep a copy on file at the farm.

#### **ITEM 14r. PROTECTION FROM CONTAMINATION**

The teat cups of the milking cluster need to be adequately shielded during the udder prepping process to assure that contaminants may not enter through the teat cup and get into the milk. AMIs are designed to automatically shift from milk to wash; therefore, adequate separation of milk and CIP solution shall be provided to minimize the risk of cross contamination of milk with cleaning and sanitizing solutions. A fail-safe valve system equivalent to an inter-wired block-and-bleed, as referenced in Item 15p.(B), shall be located as needed to prevent cross contamination. Separation shall be provided between, milk with abnormalities and milk intended for sale, and between cleaning/sanitizing solutions and milk intended for sale. AMIs, which have a pipe into the wash vat that is continuously connected to the system, shall have a valving system that provides for an air break equal to the diameter of the wash line.

#### **ITEM 18r. RAW MILK COOLING**

For AMIs the raw milk for pasteurization shall be cooled to 10°C (50°F) within four (4) hours or less after starting the milking operation and the milk shall be cooled within two (2) more hours to 7°C (45°F). The bulk milk storage tank temperature should not exceed 7°C (45°F) after that point. Bulk milk tank recording thermometers are recommended.

# Issues

- Solution Separation
- Abnormal Milk Detection
- Facility Concerns
- Teat Washing
- Attachment Failure
- Undecided Regulatory
- Enforcement

innovators in agriculture

## Valve Position Test Procedure

### Water Valve - Top of Milk Jar

During the milking the position of the valve is monitored by proximity switches mounted to the valve body. When the milking is finished and the milk can be pumped away the position of the valve is checked to see if it has switched during the milking. If position has switched, an alarm is generated and sent to the operator and all Robot will not pump the milk away. The Robot will remain out of operation until it is attended by the operator.

- Note: Both the water valve and the block and bleed valve (valves 16a and 16b) are controlled by the air solenoid. Both valves are normally closed, taking air to open them.

1. Air line is removed from the block and bleed valve (16b) and plugged.
2. Person enters the stall with a tag programmed to milk.
3. Arm turns into stall to attach to "cow".
4. Water valve (16a) is shifted into wrong position by using the manual override on the solenoid valve.
5. Alarm is generated and robot is shut down (air turned off to arm controls, vacuum pump and milk pump turned off).
6. Dairyman or technician will restart the Robot.
7. Repeat steps 1-5 to test valve 16b

### Block & Bleed Milk Pump

After the milk pump on the Robot is an assembly of two single seat three-way valves that divert abnormal milk and wash solution away from the delivery line. The position of the valves is monitored by proximity switches mounted to each valve body. When the milk is ready to be pumped away, the position of the valves is verified. If the valves are not in the intended position an alarm is generated and the milk is not pumped away. The operator will need to attend the Robot and resolve the alarm before the Robot can return to operation.

## Milk Jar Block and Bleed

Water is supplied to the Lely Astronaut™ through a manifold of ½" water valves. In series between the water valve manifold and the top of the milk jar, is a ½" 3-way water valve (16B) that, in conjunction with the water valve in the manifold (16A), offers block and bleed protection to the milk jar. The drain (bleed) port of the 3-way valve will be supplied open, with no equipment to restrict possible flow.

# Air Gap Calculation

Department of Commerce  
**Water Supply Air Gap CREW**  
 Based on ASME A112.1.2-1991

## Pipe Inlet Sizing, GPM Inflow

### 1. Determine gallons per minute flow at the inlet pipe:

a. Provide inside diameter of the largest inlet piping: .....  inches (3/4" = .75, etc.)

b. Provide flow pressure at the inlet: .....  psig

Inlet flow: .....  gpm

If required, provide size and flow pressure data for additional inlets in the following boxes:

c. Provide the inside diameter of the second inlet pipe.....

d. Provide the water flow pressure of the second inlet pipe....

Inlet flow: .....  gpm

e. Provide the inside diameter of the third inlet pipe.....

f. Provide the water flow pressure of the third inlet pipe.....

Inlet flow: .....  gpm

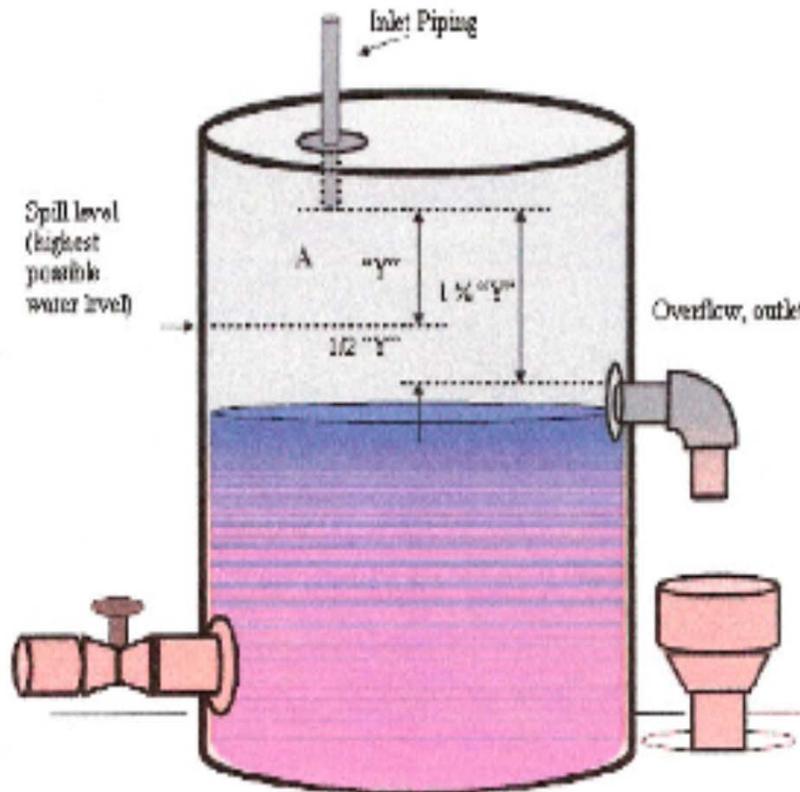

Total GPM From All Inlet Pipes Is:

**Minimum air gap with surcharge above outlet required (1 1/2 "Y")....** No Near Walls  inches  
 (Note the tank sketch below)

When affected by near walls:  inches

# Air Gap Calculation

Maximum GPM Per Pipe Outlet Size, No Near Walls												
Pipe I.D.	1"	1.25"	1.50"	2"	2.5"	3"	4"	5"	6"	8"	10"	12"
GPM	3	4.7	6.7	12	18.7	27	48	75	108	191.5	300	431

**Example of Air Gap In Open Tank With Overflow**

A = minimum required air gap

on the Dairy Farm Rule, ATCP 60.**

# MILKHOUSE REQUIREMENTS

8.29.2005

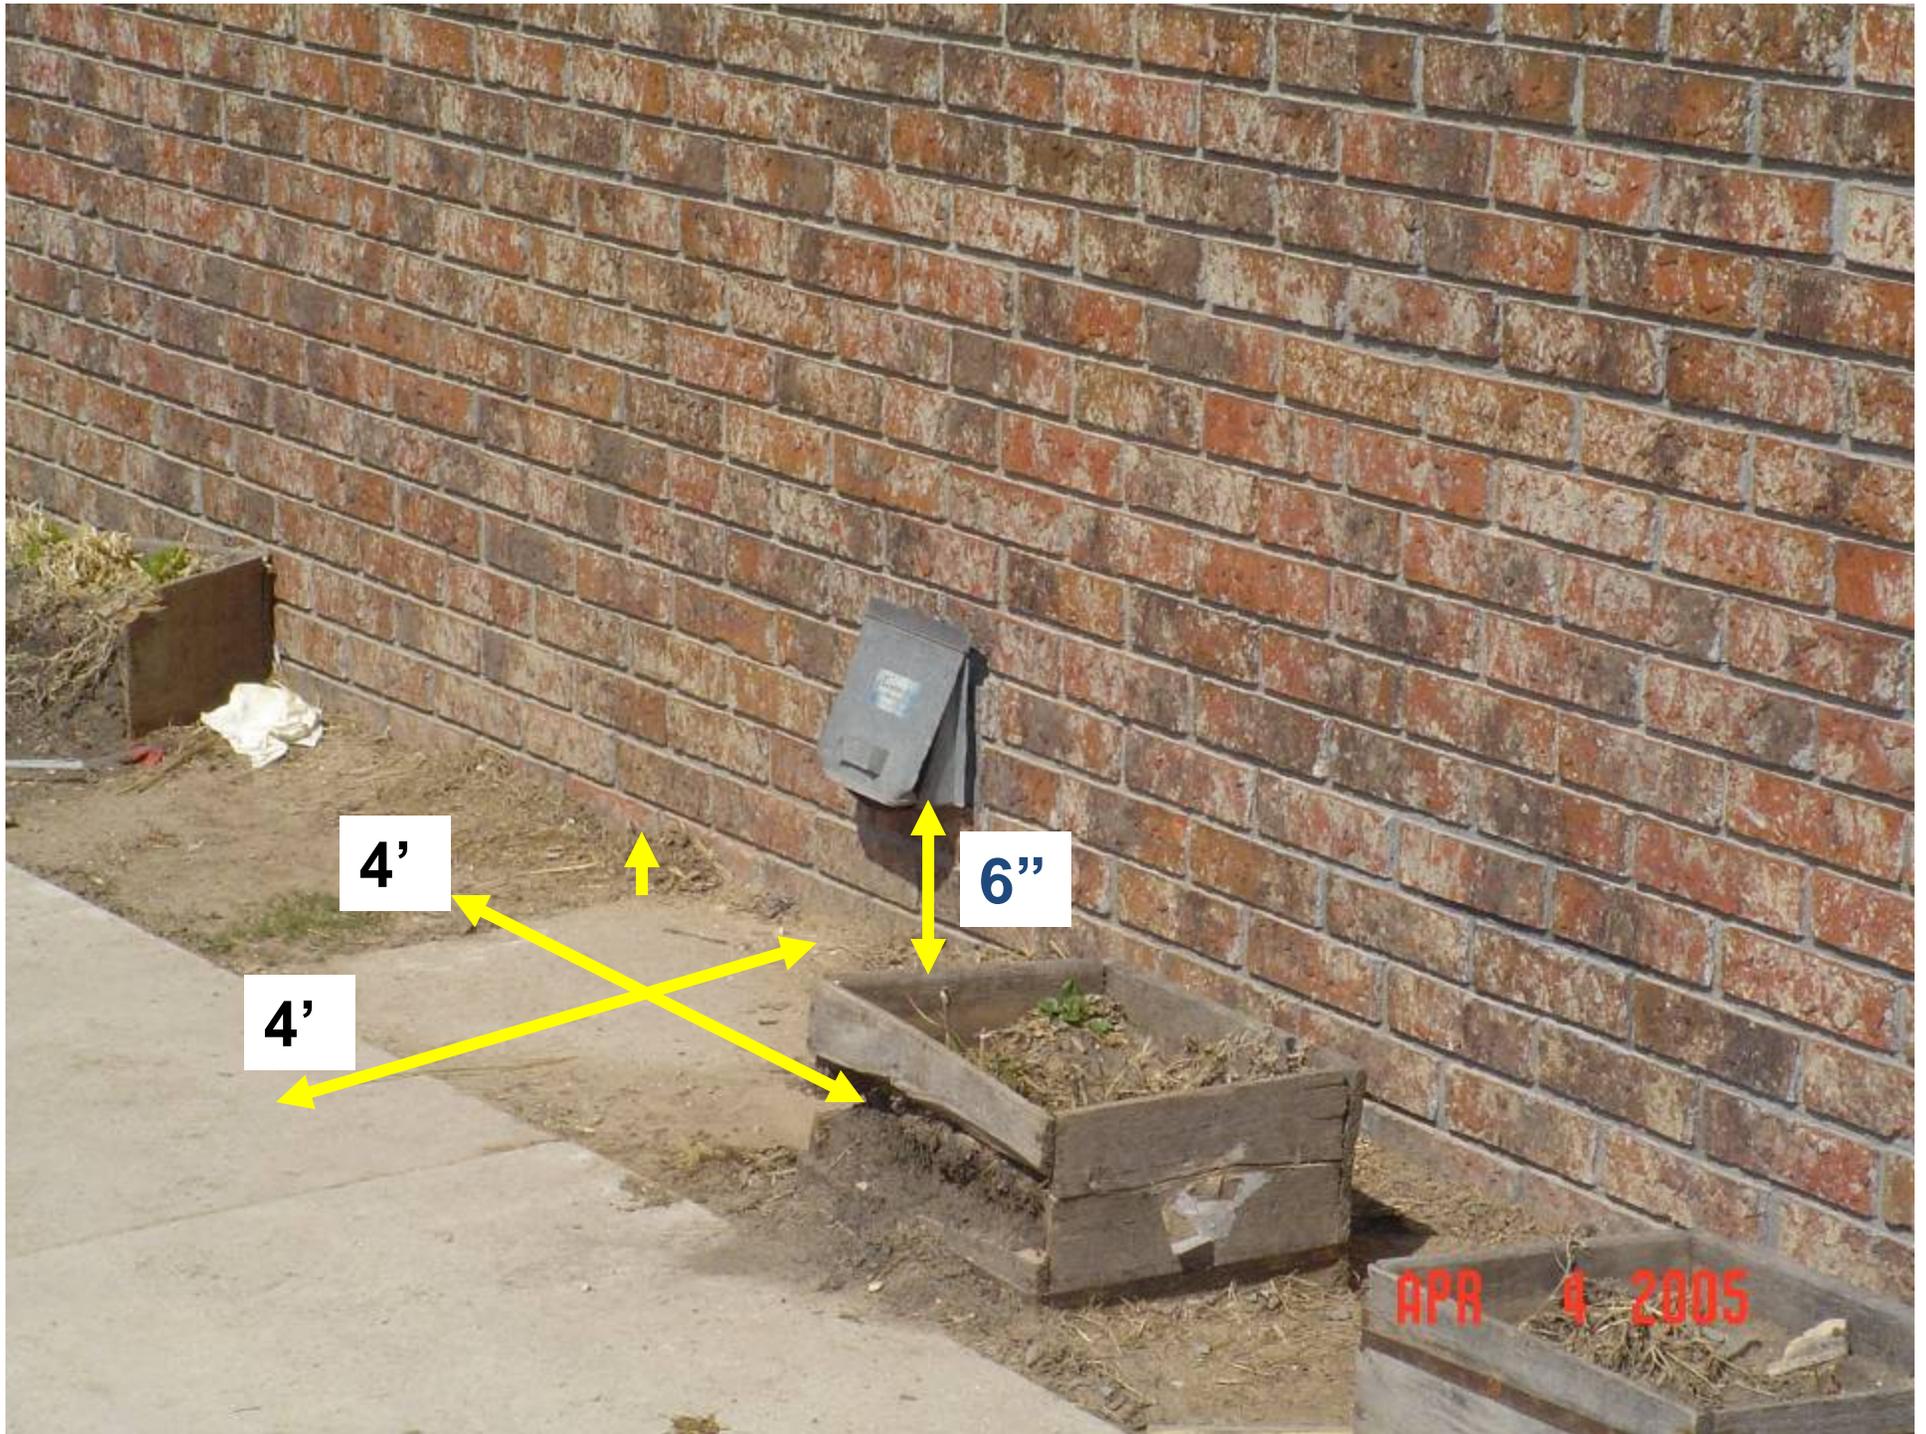

# Maintain Area Around Milking Facility in a Sanitary Condition

**No Debris or Storage up Against Outside Walls.**

**Grass Kept Trimmed.**

**Surroundings Graded to Drain Away From Facilities.**

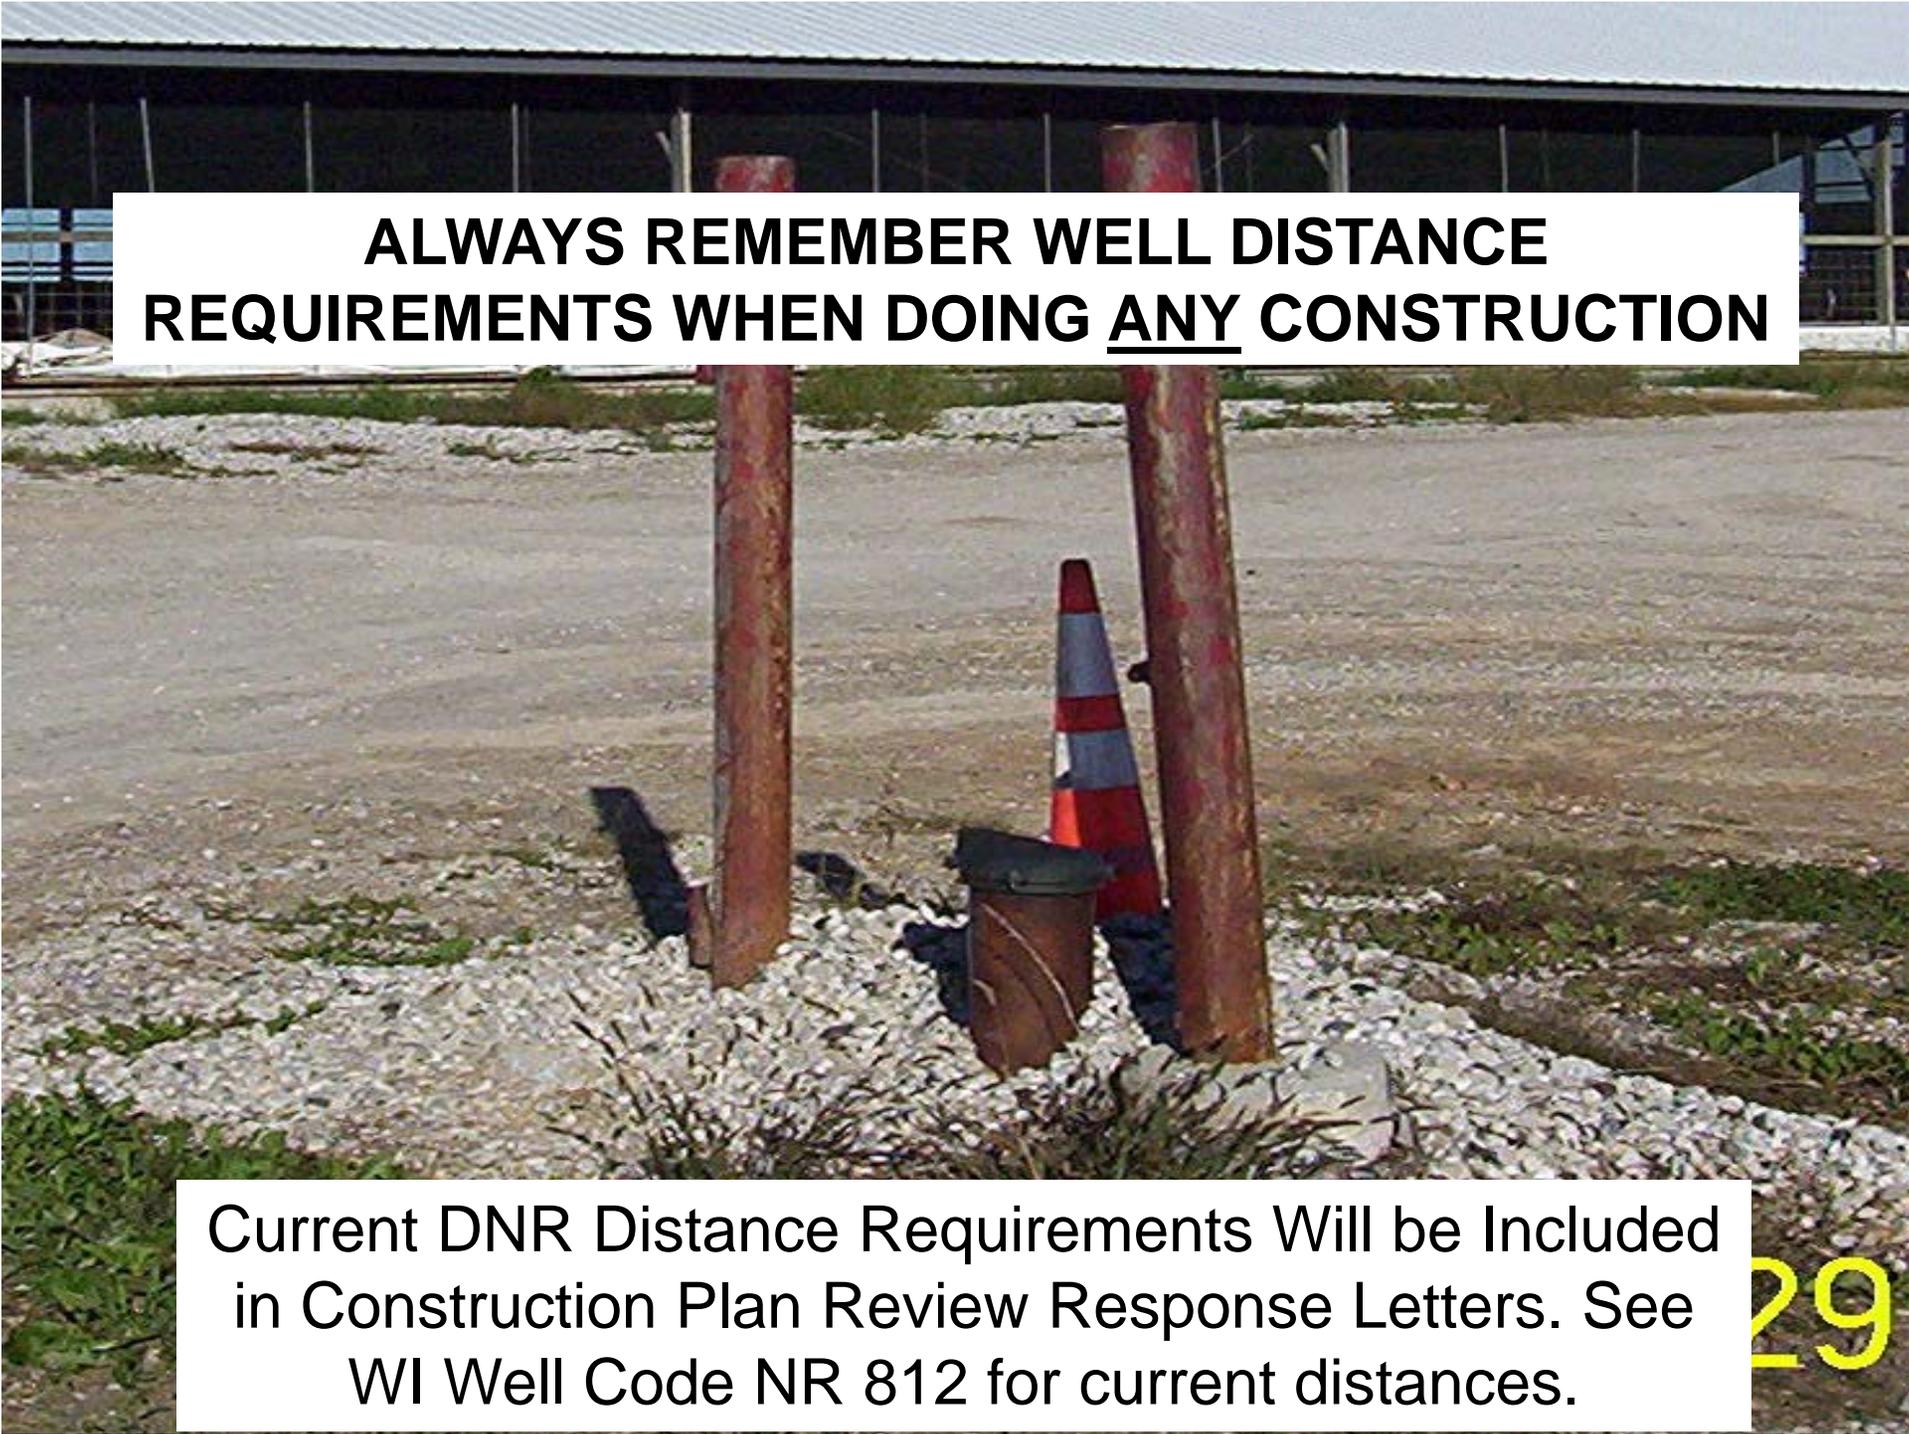

4'

4'

6''

APR 4 2005

**ALWAYS REMEMBER WELL DISTANCE  
REQUIREMENTS WHEN DOING ANY CONSTRUCTION**

Current DNR Distance Requirements Will be Included  
in Construction Plan Review Response Letters. See  
WI Well Code NR 812 for current distances.

## **Milkhouse Doors:**

- **Only Screen Doors Must Open Outward**
- **All Doors Must be Tight-Fitting and Self-Closing**
- **Milkhouse Doors to Parlor, Barn, or Other Dust/Odor Areas Must be Solid (no vents or screens)**

### **Lighting:**

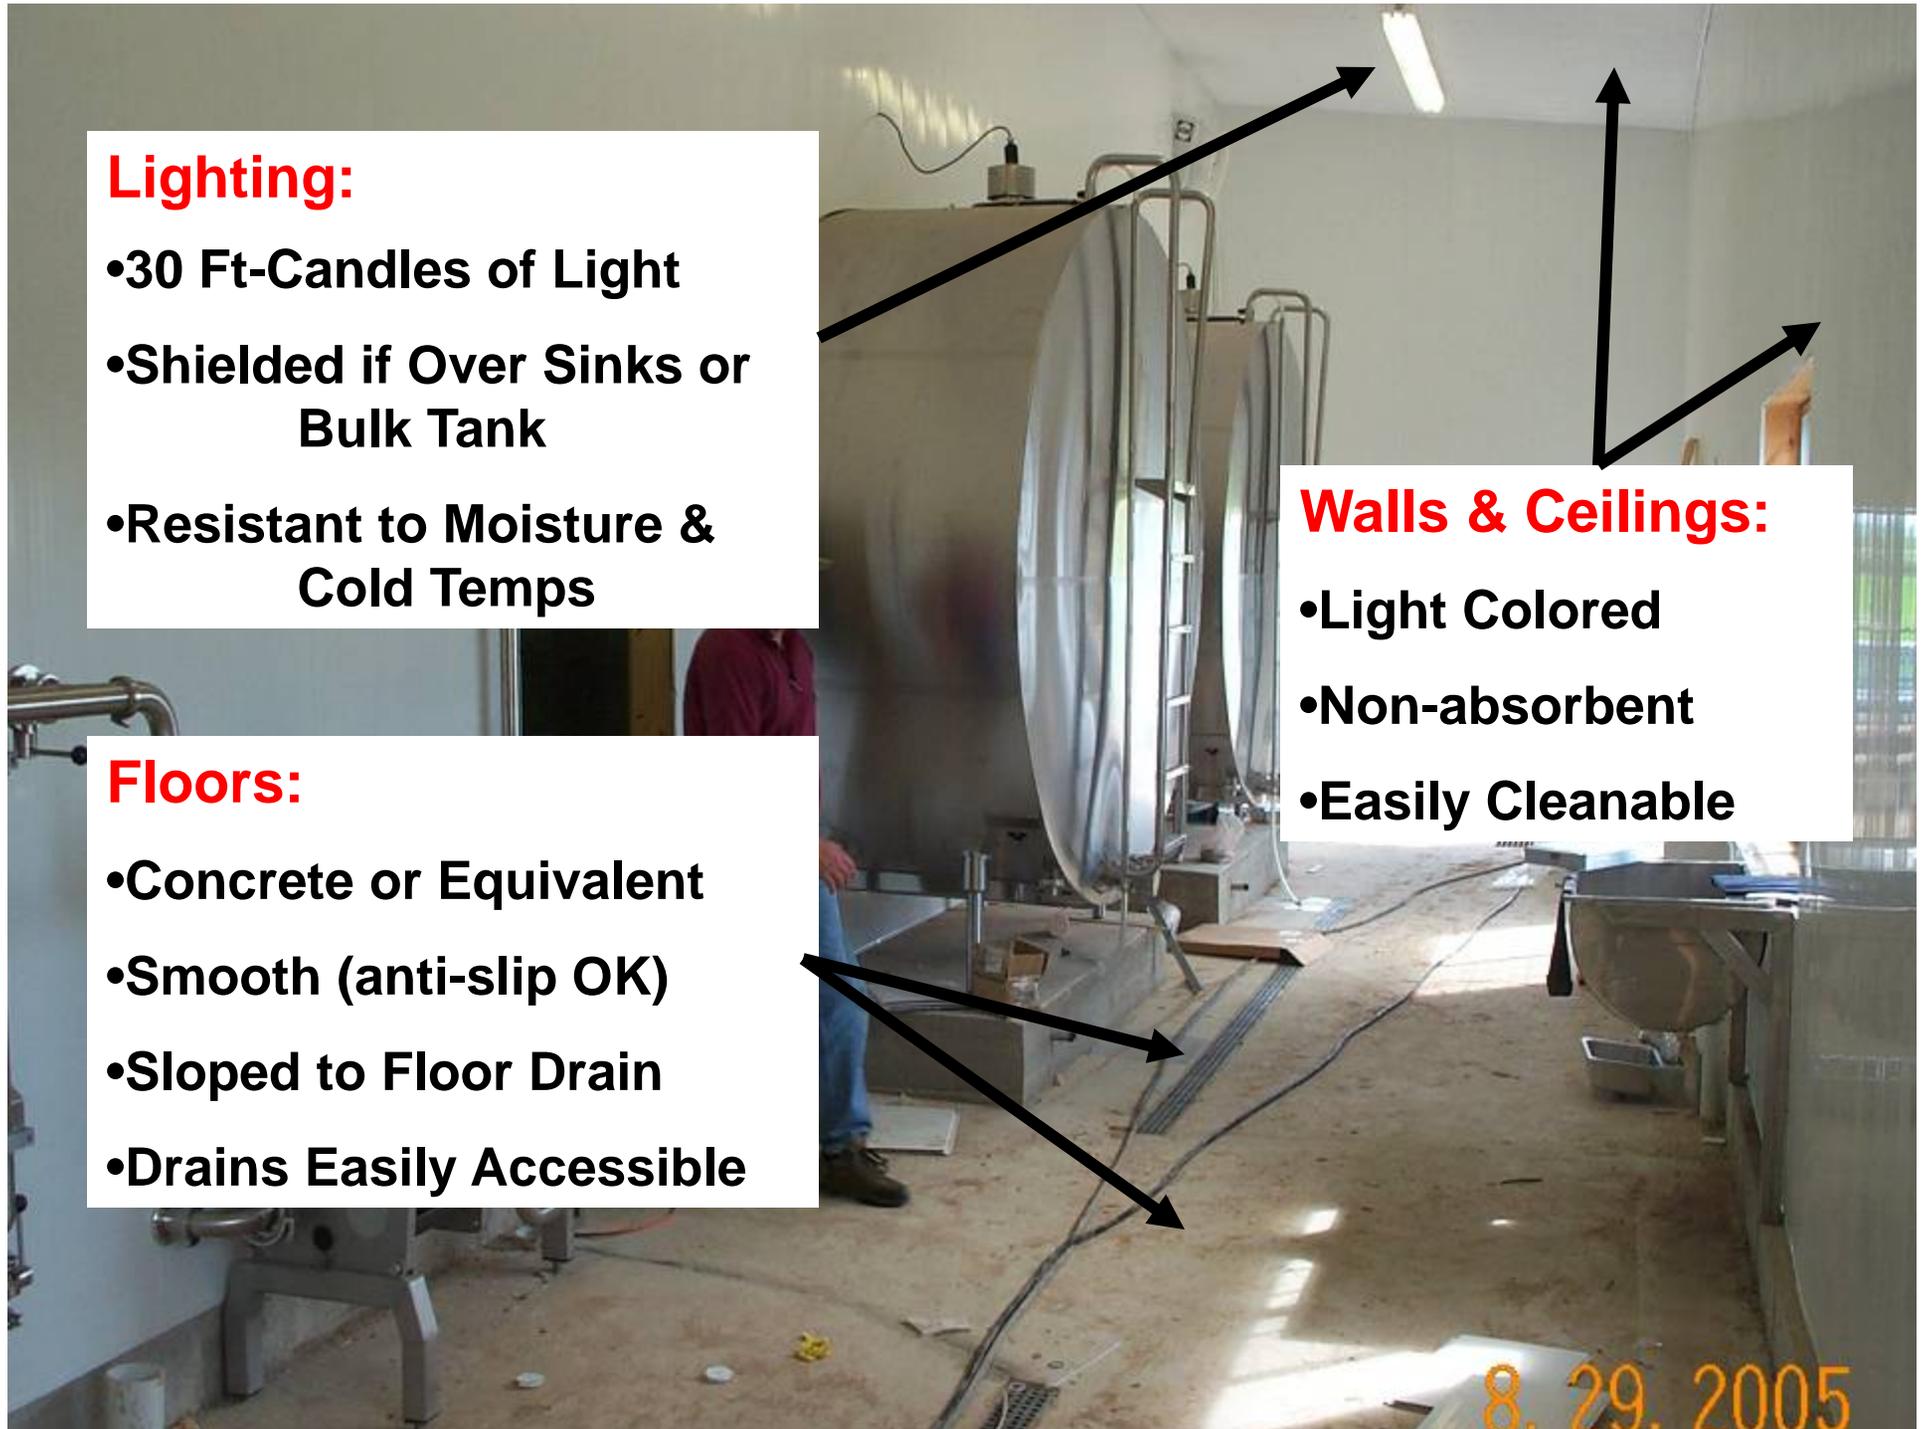

- 30 Ft-Candles of Light
- Shielded if Over Sinks or Bulk Tank
- Resistant to Moisture & Cold Temps

### **Floors:**

- Concrete or Equivalent
- Smooth (anti-slip OK)
- Sloped to Floor Drain
- Drains Easily Accessible

### **Walls & Ceilings:**

- Light Colored
- Non-absorbent
- Easily Cleanable

8.29.2005

## Acceptable Wall/Ceiling Finishes:

- Gloss Enamel Painted Concrete Block or Plywood
- Glazed Block
- If Wood Material, Raise Up Above Floor on Concrete Curb or Block
- Bare Pre-cast or Poured Concrete Only if Smooth & Free of Pits
- Glass Board or PVC Plastic Sheets, Can be Pre-Bonded to Plywood

Unacceptable

Acceptable

Mastic Filled Joints

Poured Concrete With Defects

8. 29. 2005

**Milkhouse Floor Drains:**

- Trapped if Connected to Sanitary Sewer
- Accessible for Cleaning
- Not Directly Under Bulk Tank

05/08/2007

## Milkhouse Ventilation

- Adequate to prevent condensation
- Control Odors
- Screened
- Located Away From Wash Sinks & Bulk Tank

- Tight-fitting Mechanical or Gravity Louvers Required if Exhausts Into Parlor, Barn, or Other Dust/Odor Environment.

8. 29. 2005

## **Air From Utility Rooms Can be Used to Ventilate Milkhouse if:**

- **Fan or Vent Openings Between Utility Room & Milkhouse are Screened.**
- **No Openings Exist Between Utility Room and Parlor, Cattle Housing, etc.**
- **Forced Air Heating with Cold Air Returns Would Be Considered a Direct Opening Between Any Rooms Connected to the System.**

What Room Are These Pipes Venting?

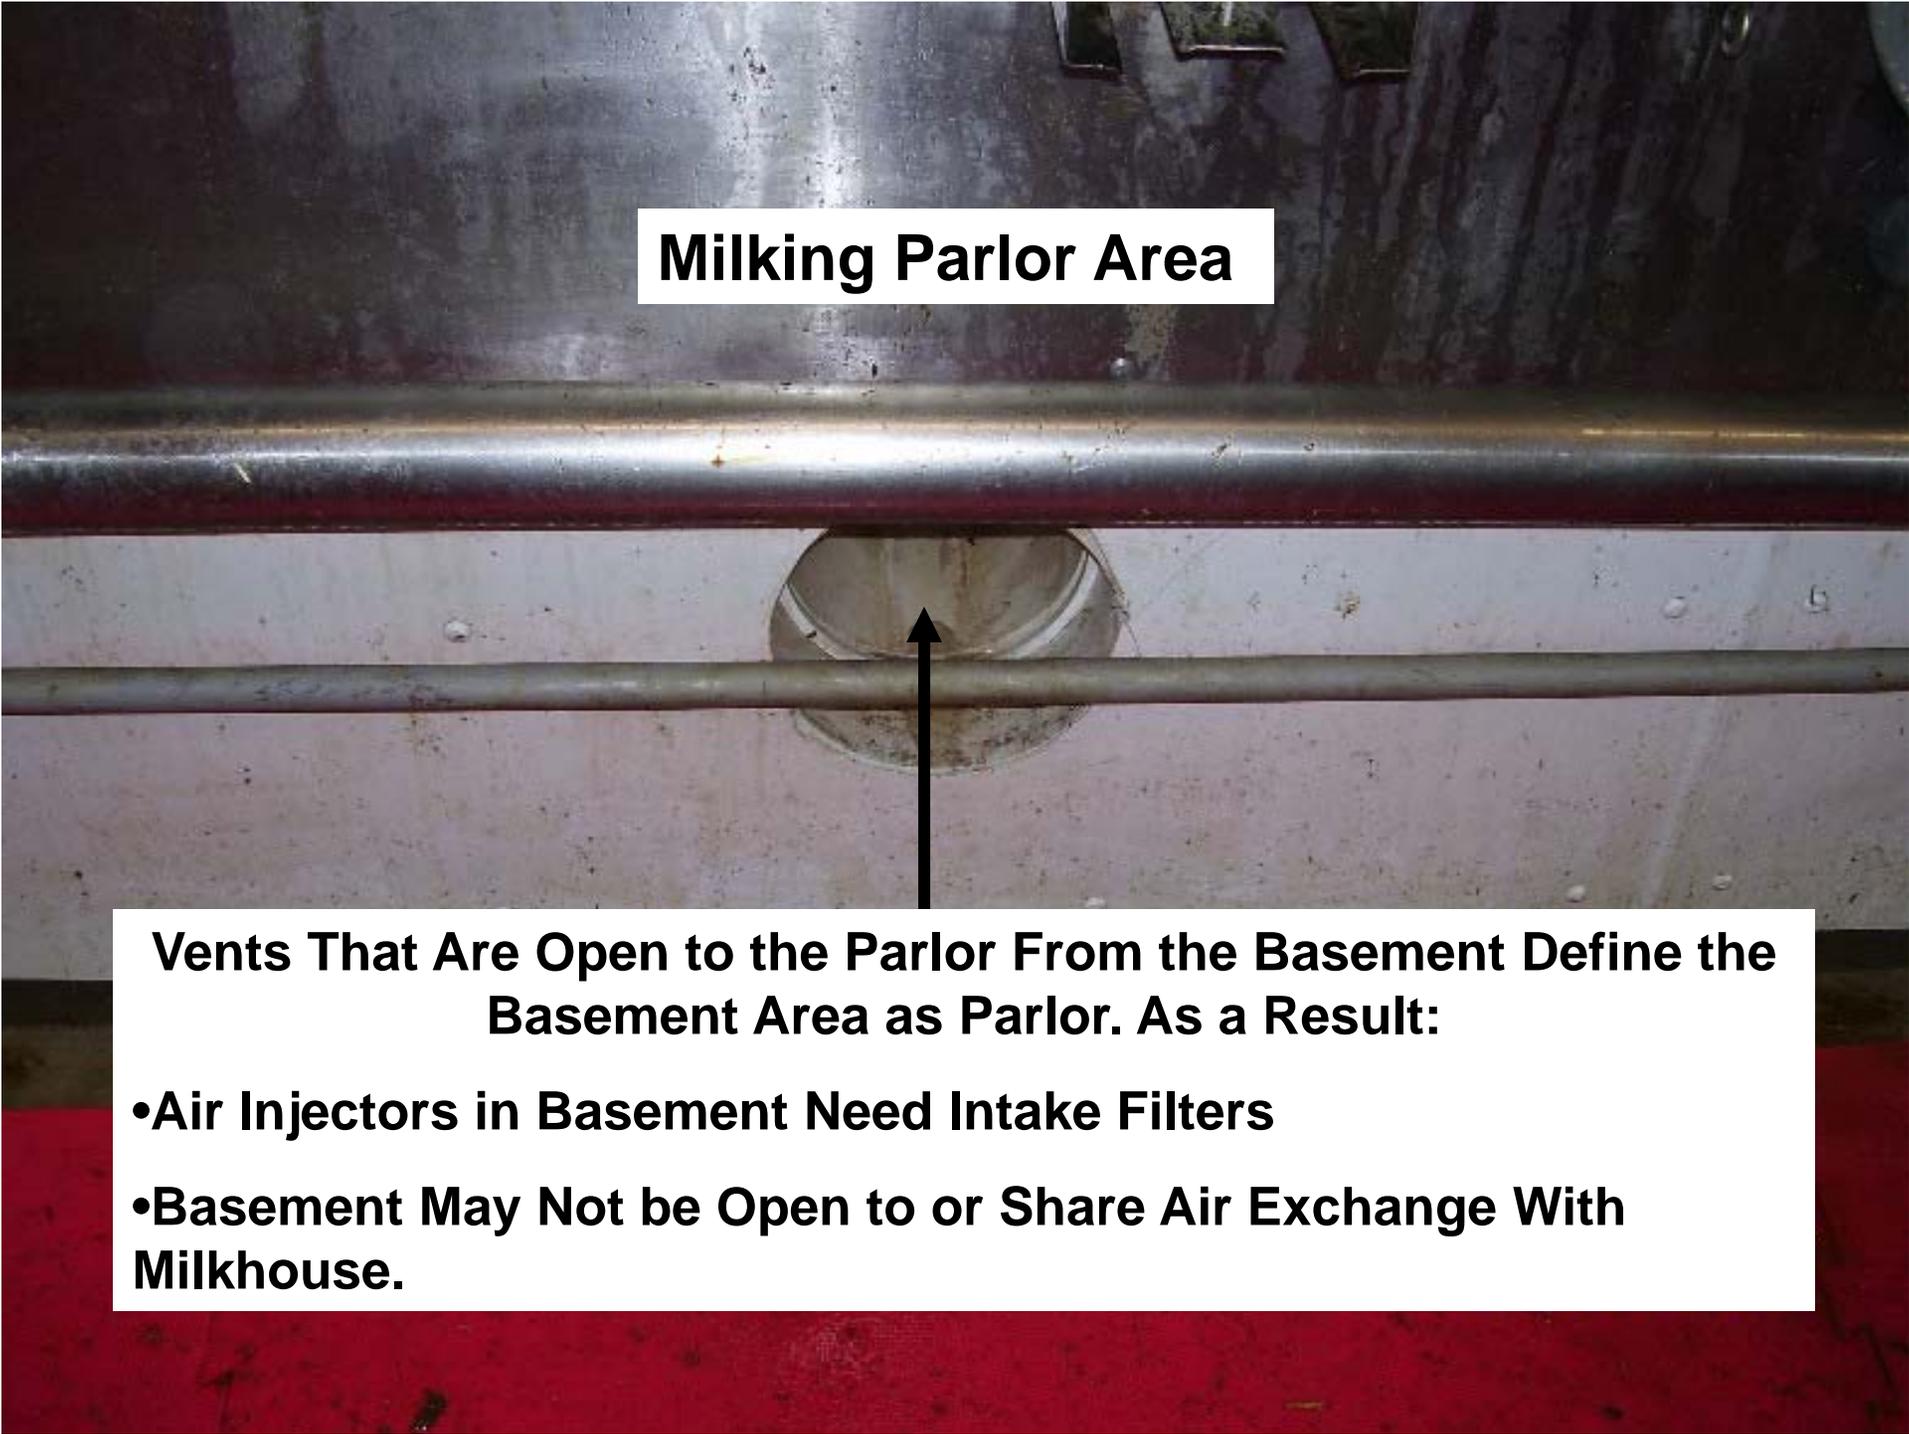

Fan

What Room Are These Vent Pipes In?

Sometimes the Ventilation Connection Isn't so Obvious, but Still Needs to be Considered.

9.9.2003

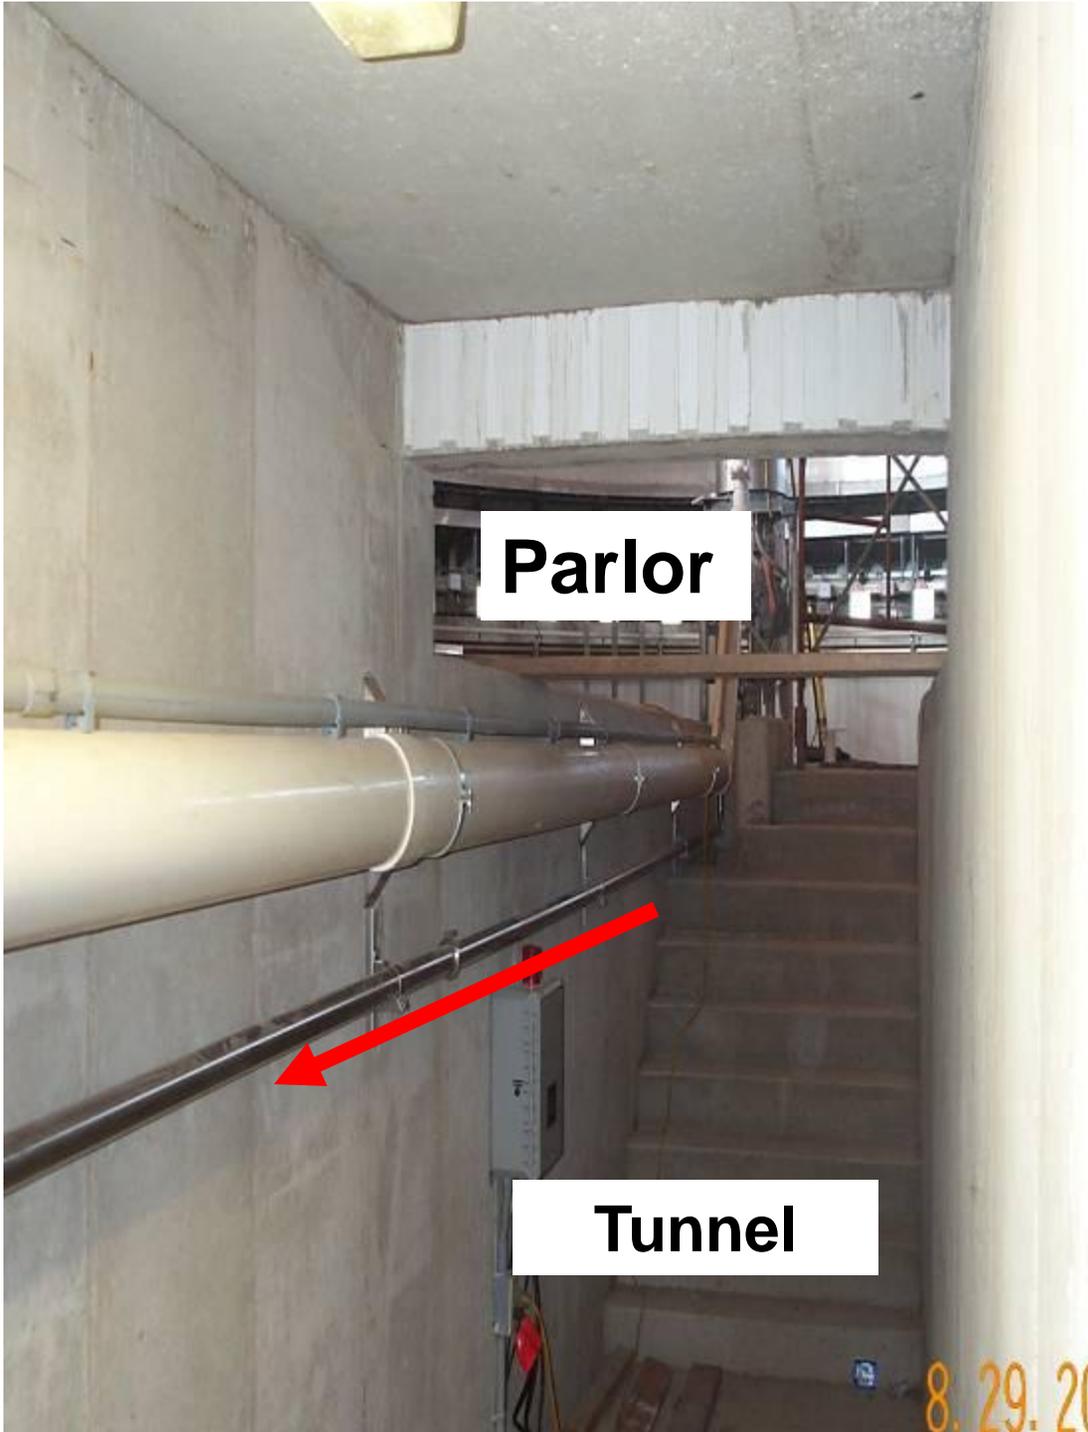

En Acier

**Milking Parlor Area**

**Vents That Are Open to the Parlor From the Basement Define the Basement Area as Parlor. As a Result:**

- **Air Injectors in Basement Need Intake Filters**
- **Basement May Not be Open to or Share Air Exchange With Milkhouse.**

**Parlor**

**Tunnel**

**What Area Is This  
and Where is it  
Vented or Open to?**

**With No Solid Door  
Separation The Entire  
Area Becomes Parlor**

# Milk House Sink Requirements

- Two Compartment wash sink with an unrestricted Hand wash Sink on the side.
- Two (double compartment sinks) one of the 4 sinks serving as a hand wash sink
- Always Hot and Cold Water Under Pressure and soap and Towel

**Don't Forget**

**24"**

**18"**

**18"**

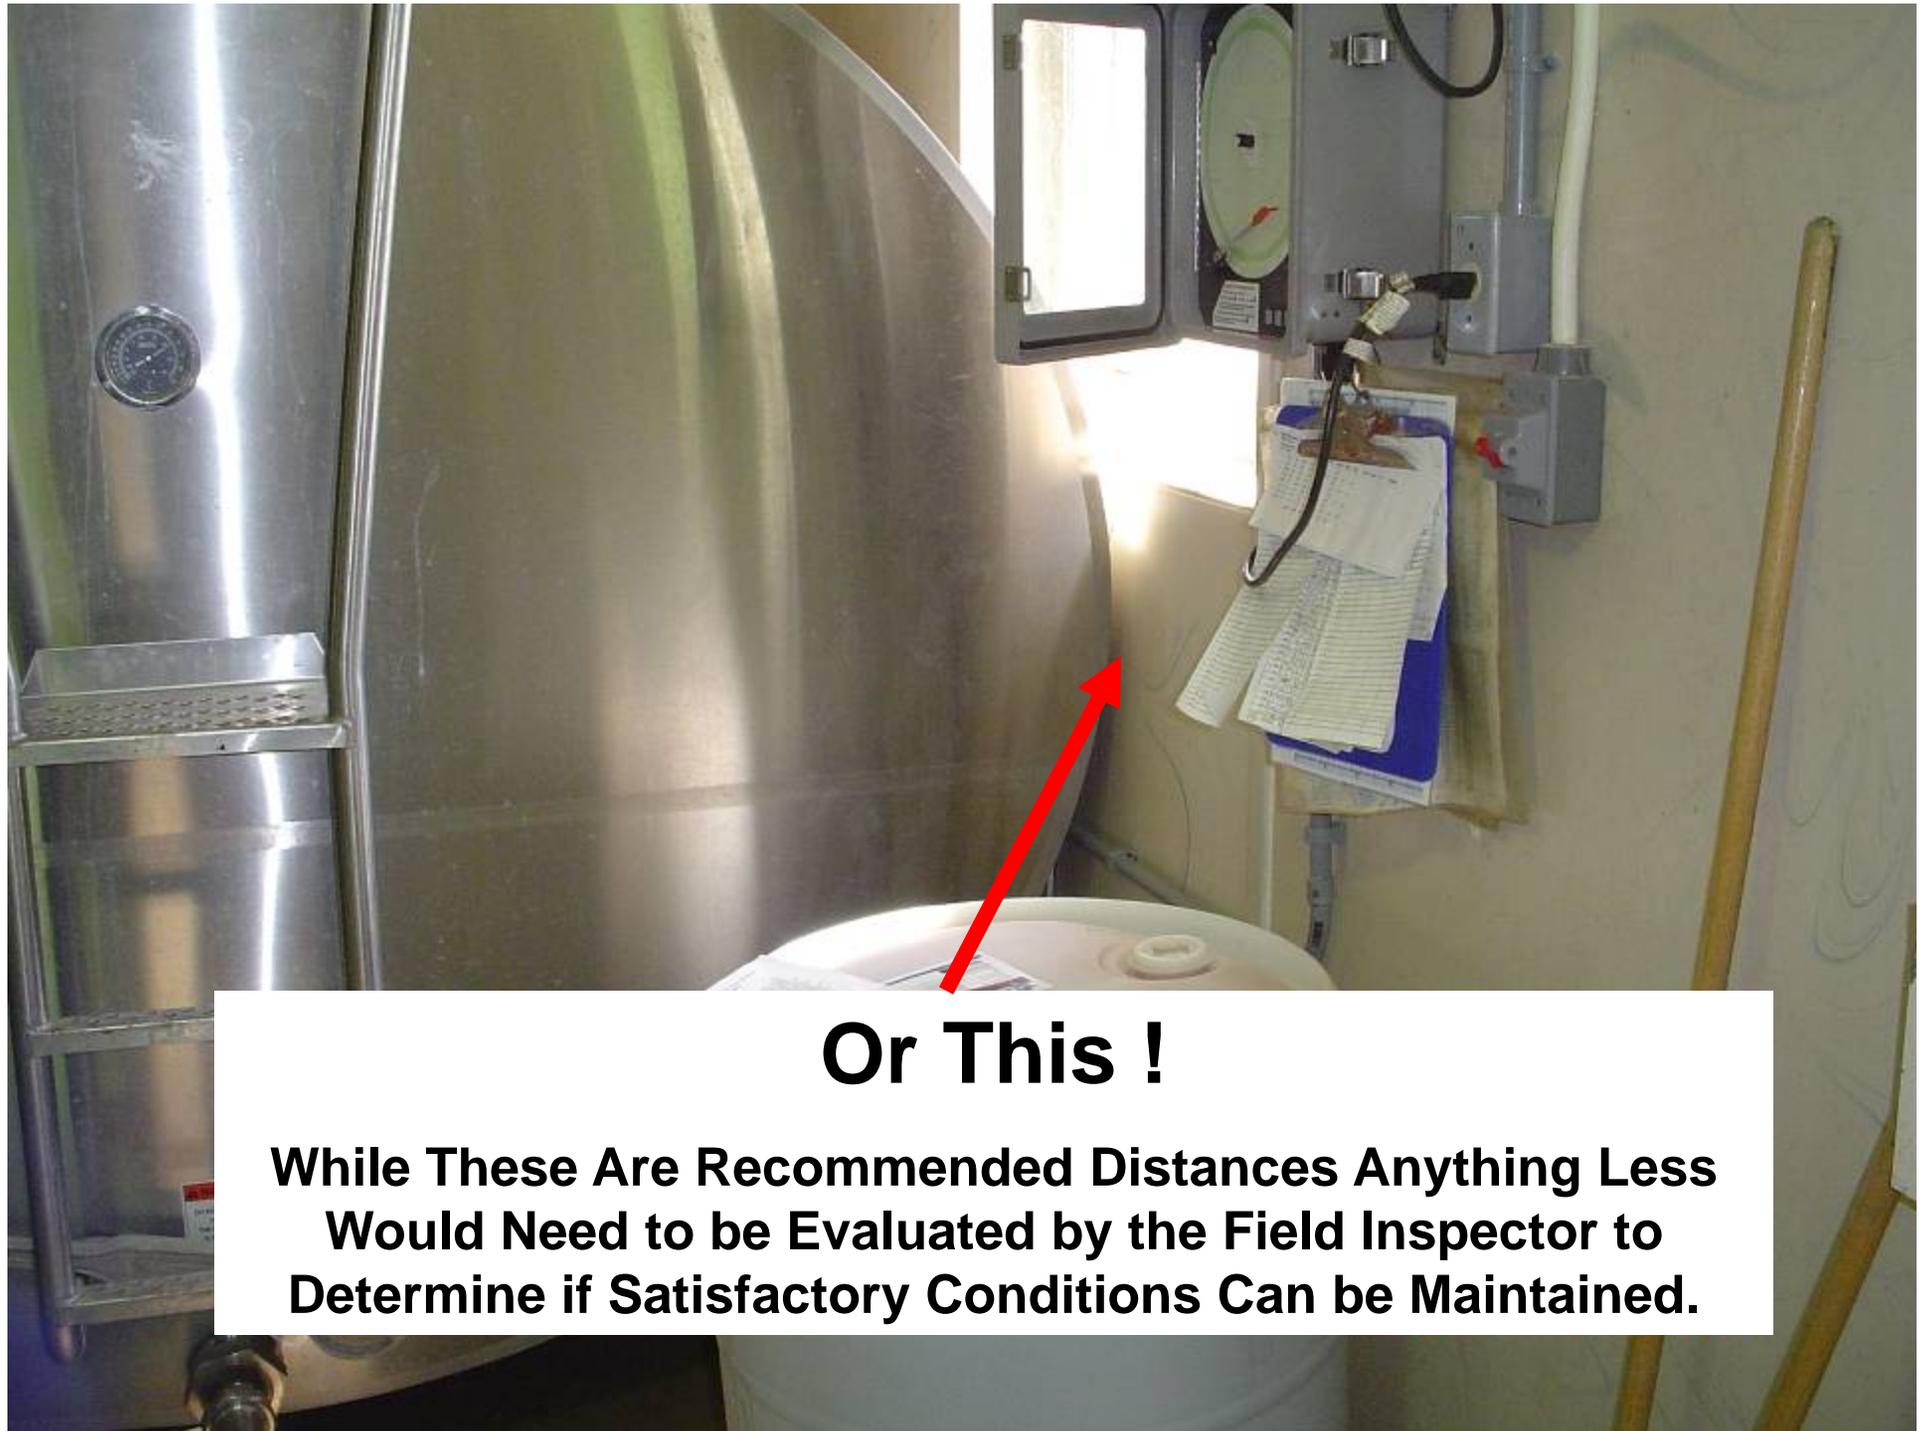

**Bulk Tank Clearances Measured From Tank to Walls & Ceiling or Fixed Pieces of Equipment**

**18"**

**24"**

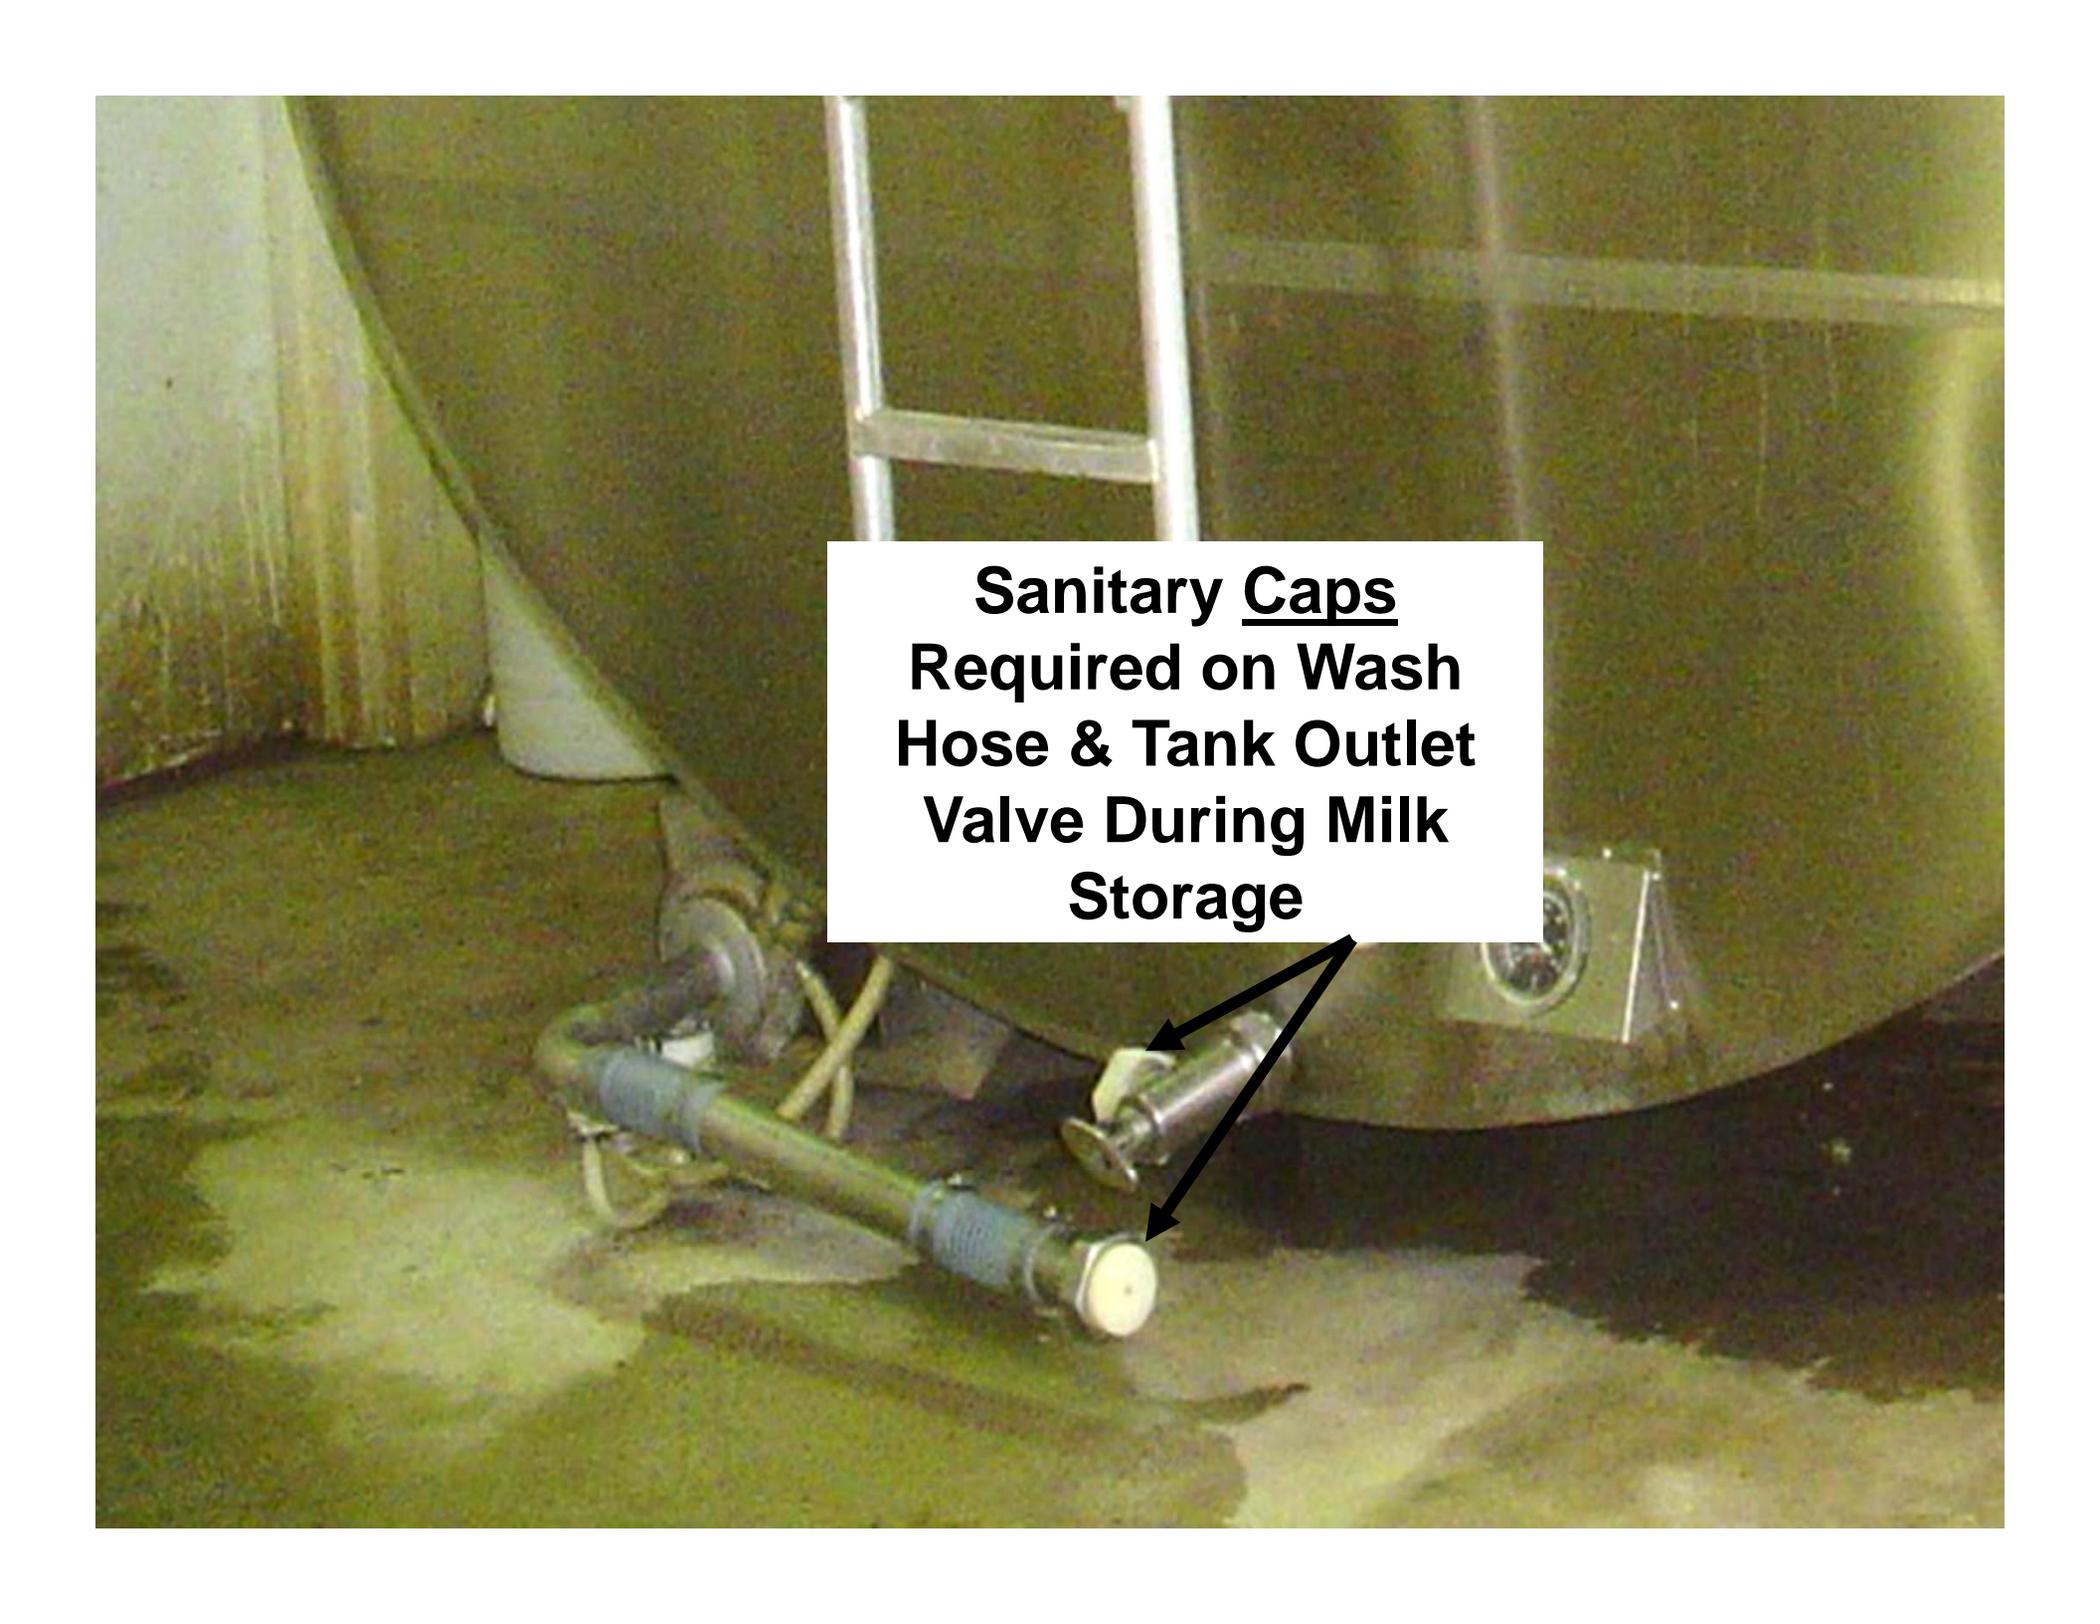

**We Don't Want to See This!**

9.9.2003

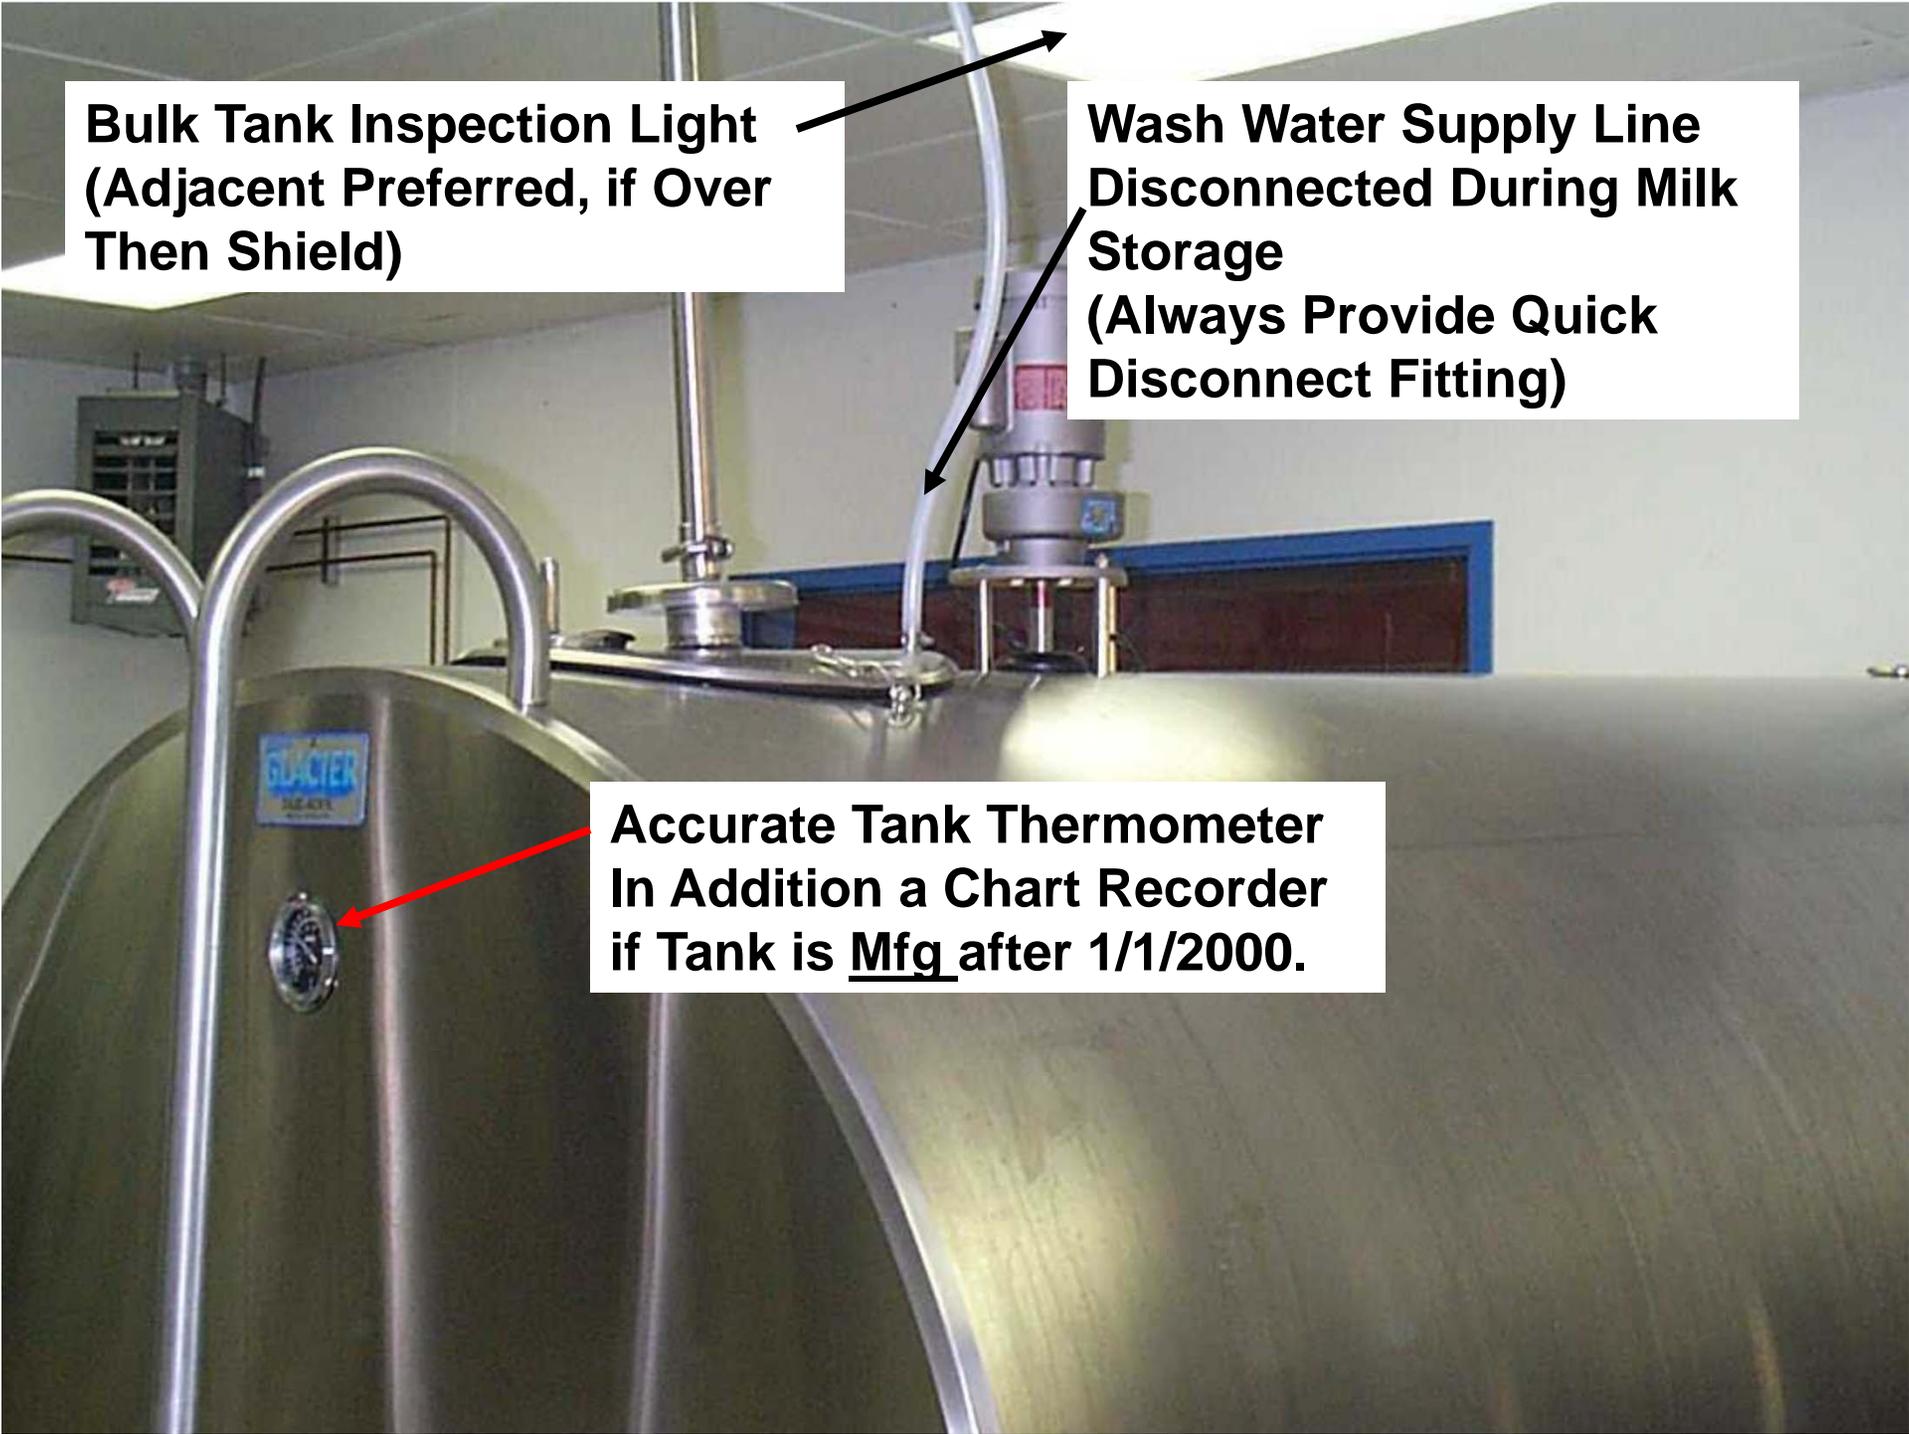

## **Or This !**

**While These Are Recommended Distances Anything Less  
Would Need to be Evaluated by the Field Inspector to  
Determine if Satisfactory Conditions Can be Maintained.**

**Sanitary Caps  
Required on Wash  
Hose & Tank Outlet  
Valve During Milk  
Storage**

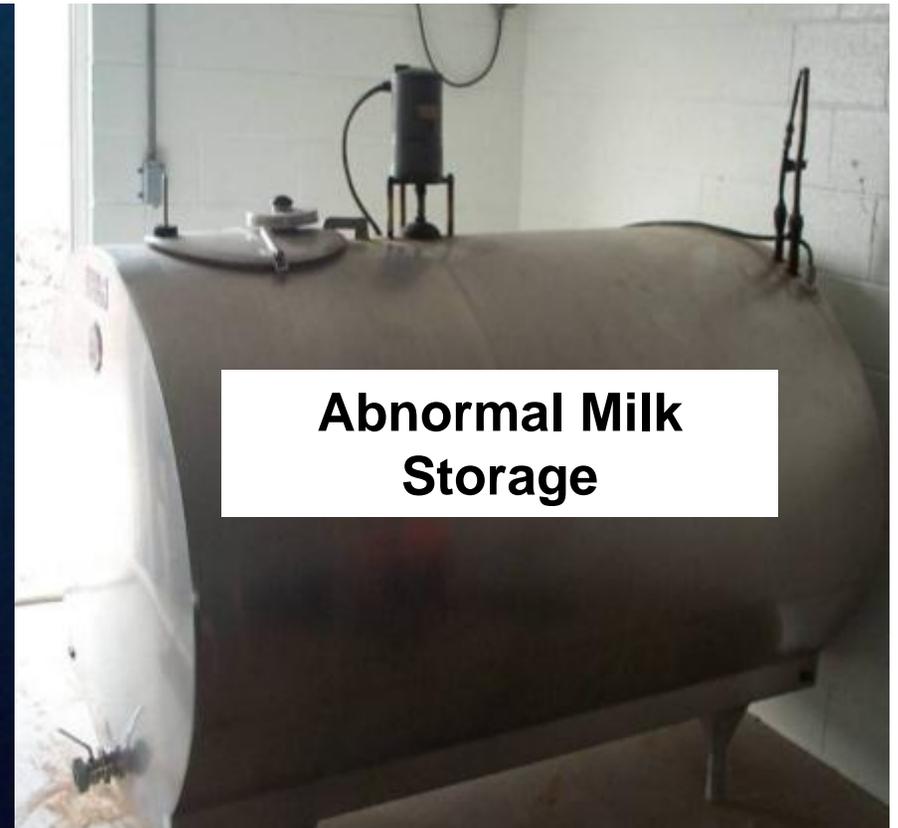

**Bulk Tank Inspection Light  
(Adjacent Preferred, if Over  
Then Shield)**

**Wash Water Supply Line  
Disconnected During Milk  
Storage  
(Always Provide Quick  
Disconnect Fitting)**

**Accurate Tank Thermometer  
In Addition a Chart Recorder  
if Tank is Mfg after 1/1/2000.**

**Calf Milk  
Pasteurizer**

**Abnormal Milk  
Storage**

- These Items May Not be in Parlor or Milkhouse
- Utility Room OK
- Separate Room Within Milkhouse OK (With Full Walls & Tight Fitting Door)

# **Department Expectations During Major Remodeling Projects**

- 1) Sanitation in milk handling areas to be maintained in good condition, (injury & product safety concerns), haz. materials**
- 2) If milkhouse is open to the elements temporary plastic walls that effectively protect the product and milking equipment shall be constructed.**
- 3) If the bulk tank is outside it must be effectively covered with clean plastic sheeting. If for extended period, temporary plastic walls & roof required.**
- 4) All liquid waste properly removed from the area.**
- 5) Adequate equipment cleaning facilities remain available, including safe water supply.**
- 6) Major projects that compromise milking facilities to be completed promptly.**

## **When Modifications Are Made to a Milking System:**

- **Try to Include All Facility Repairs That Occurred as a Result of the Work That Was Done**

- **If Not, Then at Least Provide Producer A Written Summary of What is Left to do to Meet Compliance, Such as:**

- **Patch Holes in Milkhouse Walls/Ceiling**
- **Finish Wall Around Bulk Tank**
- **Move Lighting Fixtures**

- Toilets Must be Conveniently Accessible
- If in the Milking Facility it Must Have a Solid, Tight-Fitting, & Self-Closing Door
- Shall Comply With Comm. Code 62 & NR 812
- Restroom Wastewater May Not be Discharged Into the Manure Handling System

## Laundry Areas

- Installations May be in Milkhouse/Parlor Used For Cow Towels Only
- Dryers Properly Vented
- Adequate Space

## Milk Receiver Pits in Milkhouse:

- Need Drain or Sump
- Ample Size & Light
- Meets Milkhouse Finish Requirements
- Egress Into Pit From a Securely Mounted Ladder or Stairs

Pipeline Tunnel

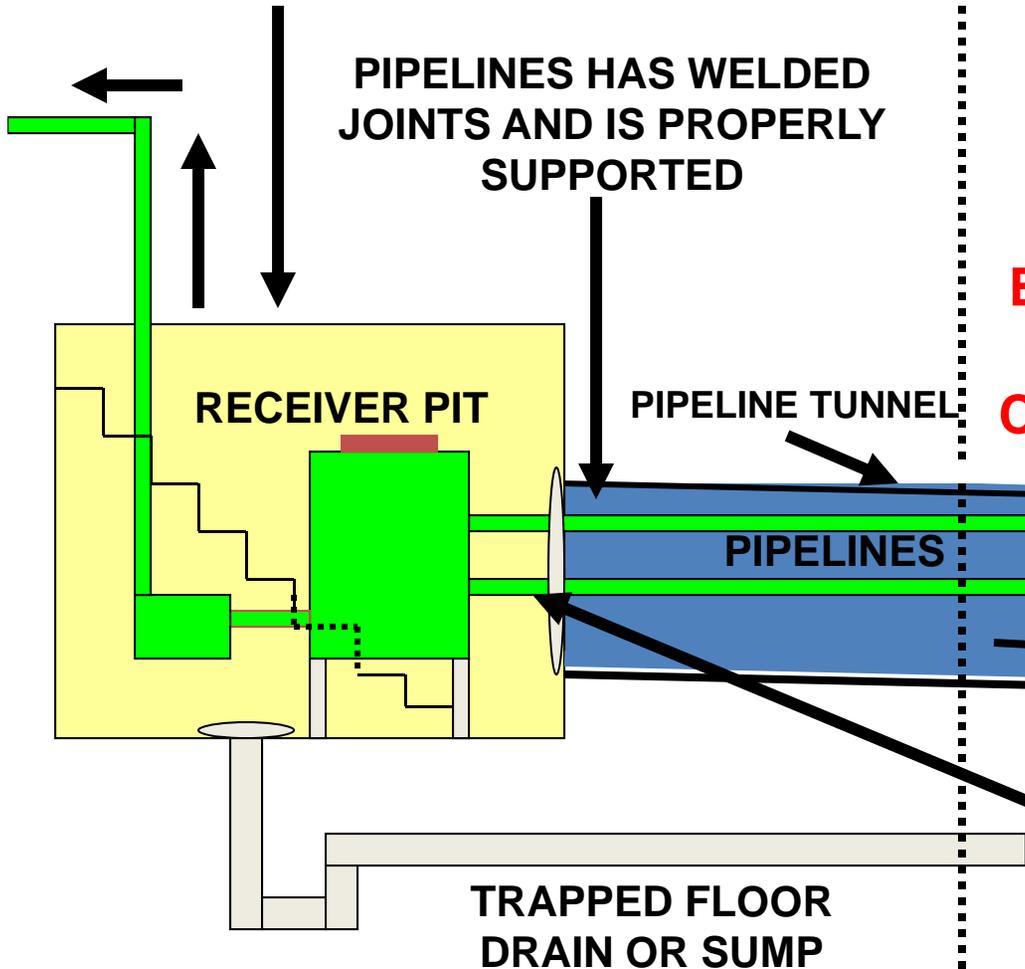

Not This

APR 4 2005

# MILKHOUSE SIDE

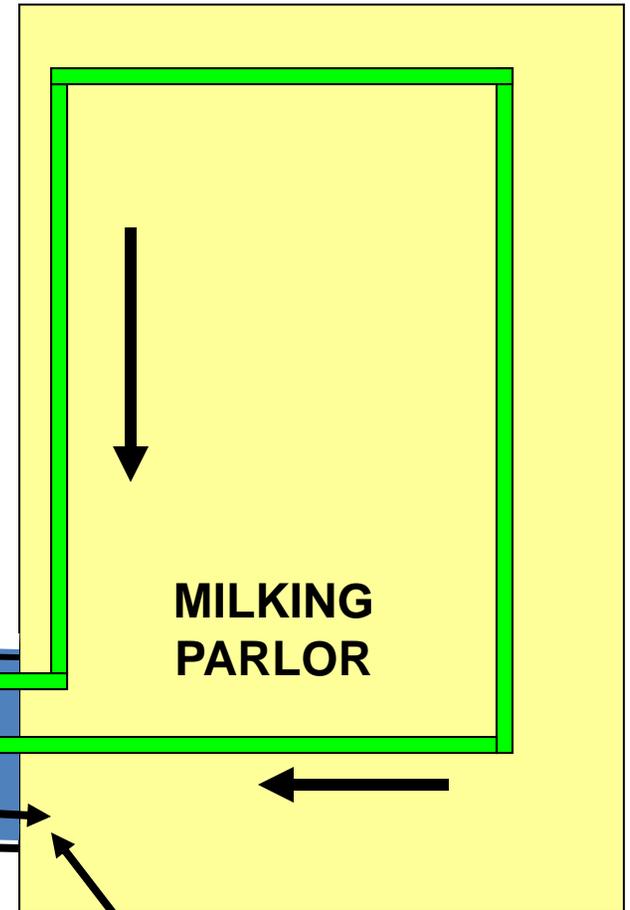

ADEQUATE ROOM & LIGHTING  
NEEDED IN RECEIVER PIT AREA  
ALONG WITH SAFE ACCESS.

Cast in  
Concrete

TIGHT SEAL  
AROUND  
LINES

Tunnel Sloped  
For Drainage

**Milk Receiver Pit in Milkhouse**

**Pipeline Tunnel Tightly Sealed Off With Stainless Steel Plate  
(Isolating Milkhouse From Parlor)**

**Sump Pump/Drain**

05/08/2007

**Close Up of Tunnel Seal Plate With Pipeline Flanges**

**If the Area in Which the Milk Receiver is Located was in or Open to the Parlor Then the Unfiltered Type Air Injector Would be Unacceptable.**

05/08/2007

**Milking Parlor Open to This Milk Receiver Pit Area**

**Unfiltered Air Injector**

**Like This One Is**

05/08/2007

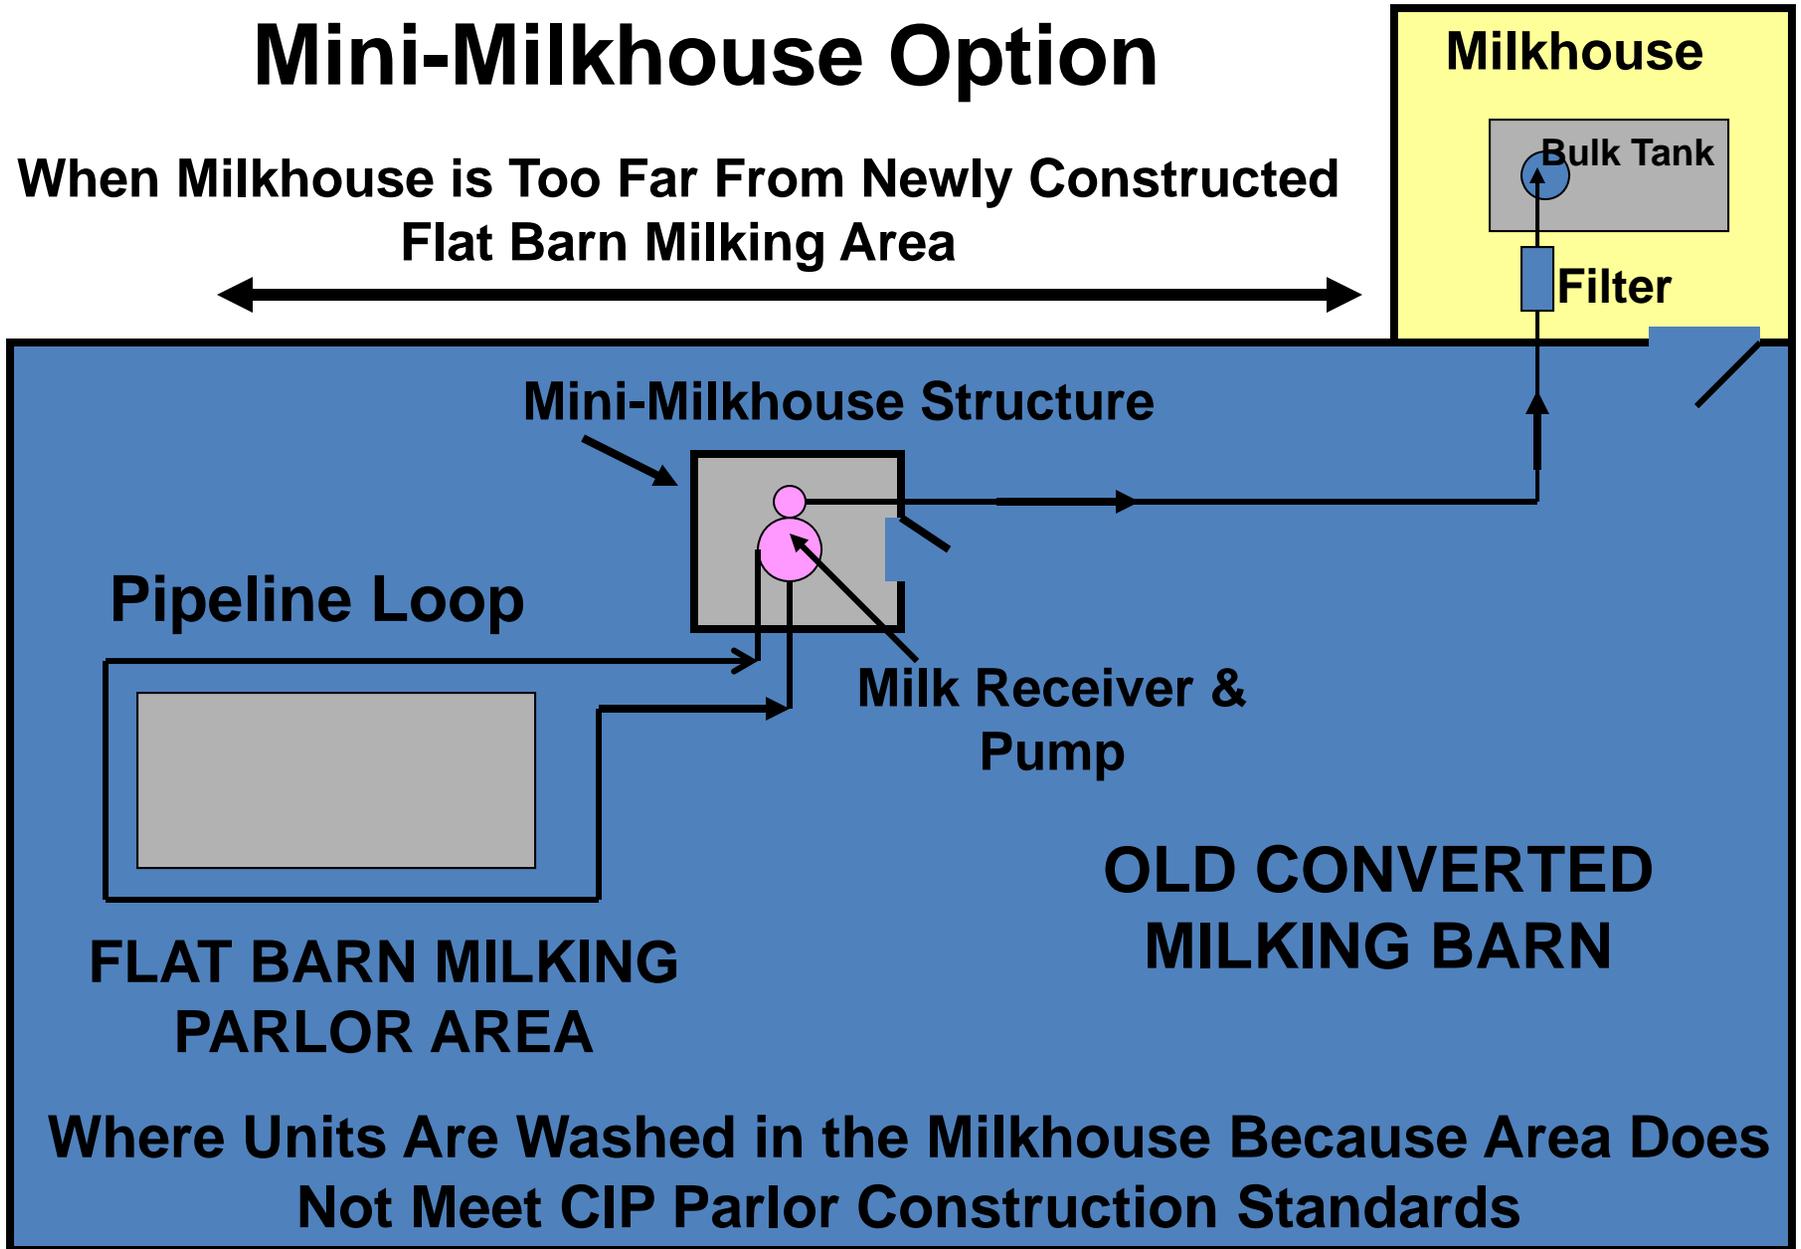

## Undersized Milk Receiver Pit

- No Room For Ladder Much Less Egress Into Pit Area for Servicing & Inspection
- Usually Air Blow Fitting is Located Near Receiver Making it Nearly Impossible to Service Properly.

# Mini-Milkhouse Option

When Milkhouse is Too Far From Newly Constructed Flat Barn Milking Area

# **REQUIREMENTS FOR A MINI-MILKHOUSE/ PUMPHOUSE**

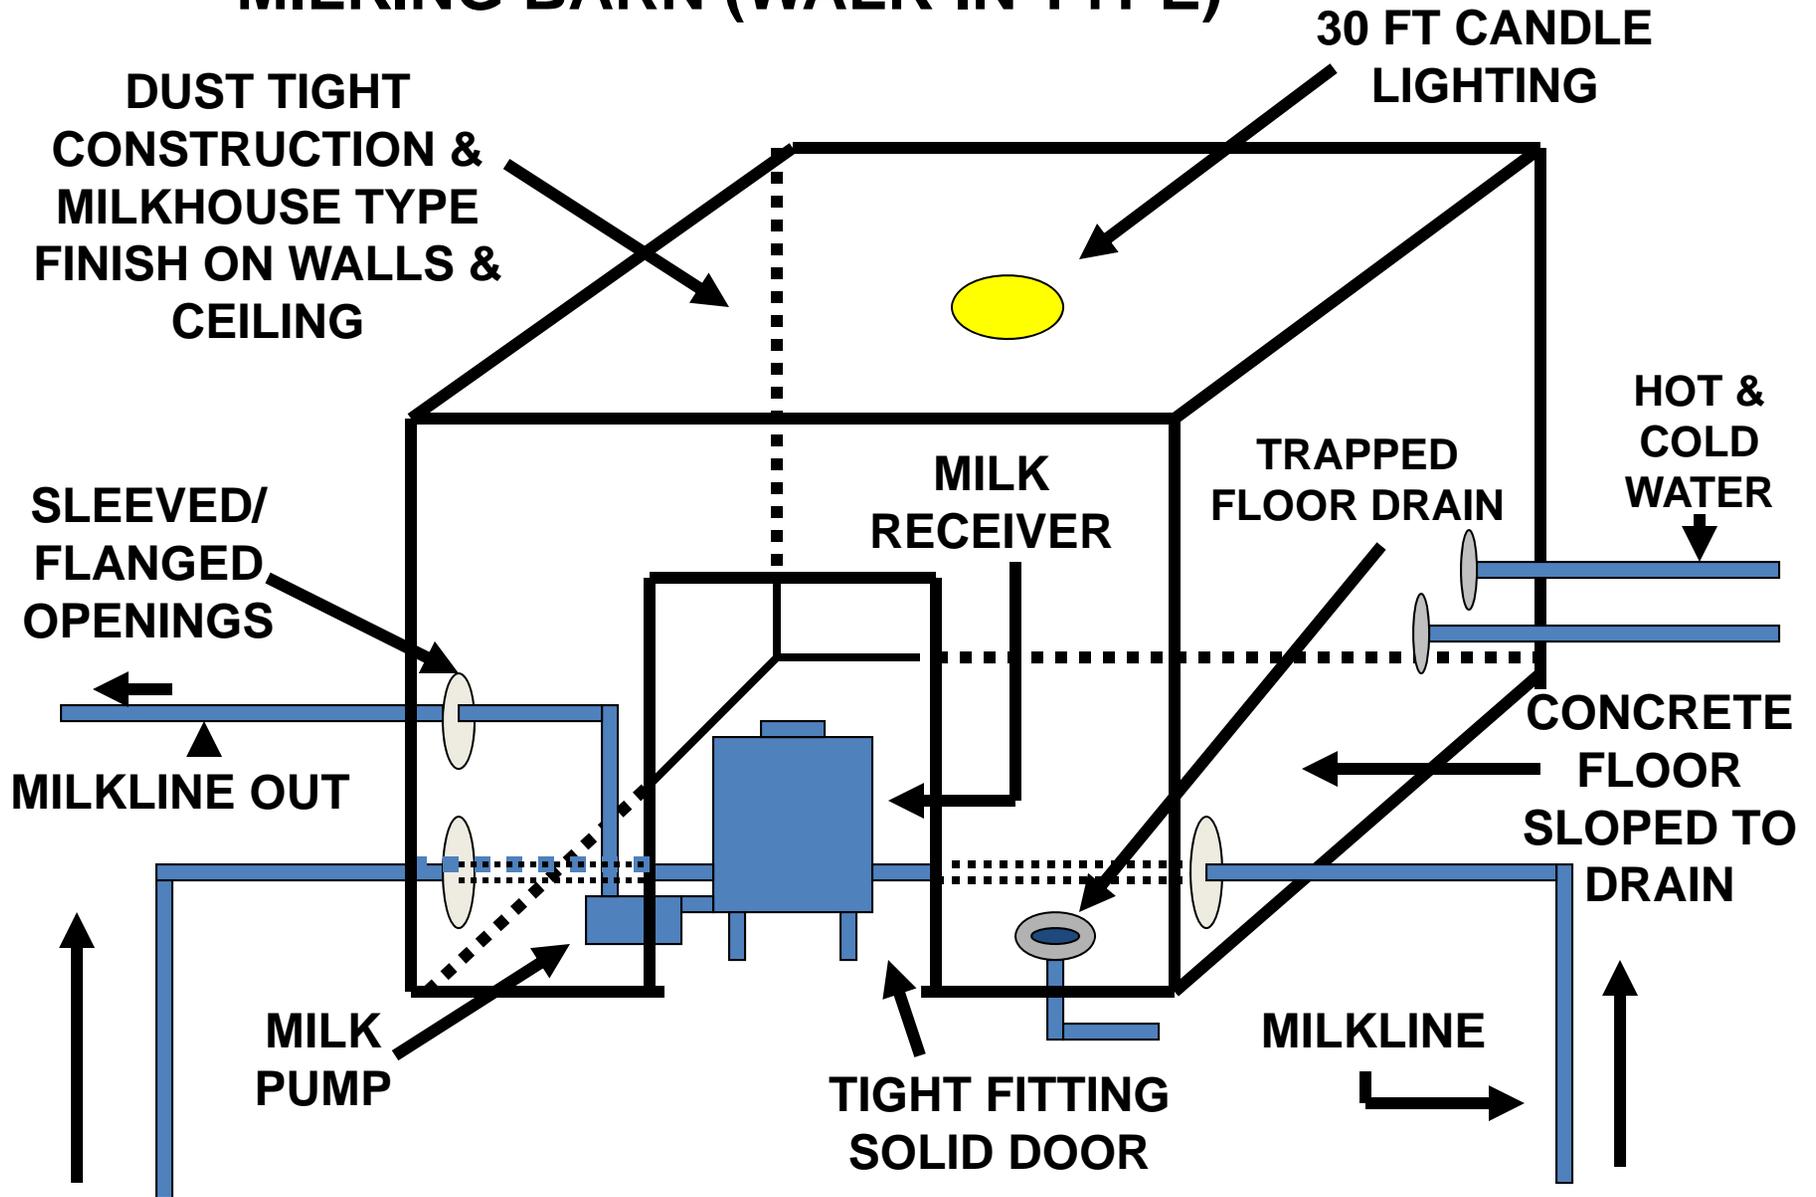

## **•Items in Mini-Milkhouse Are Limited to:**

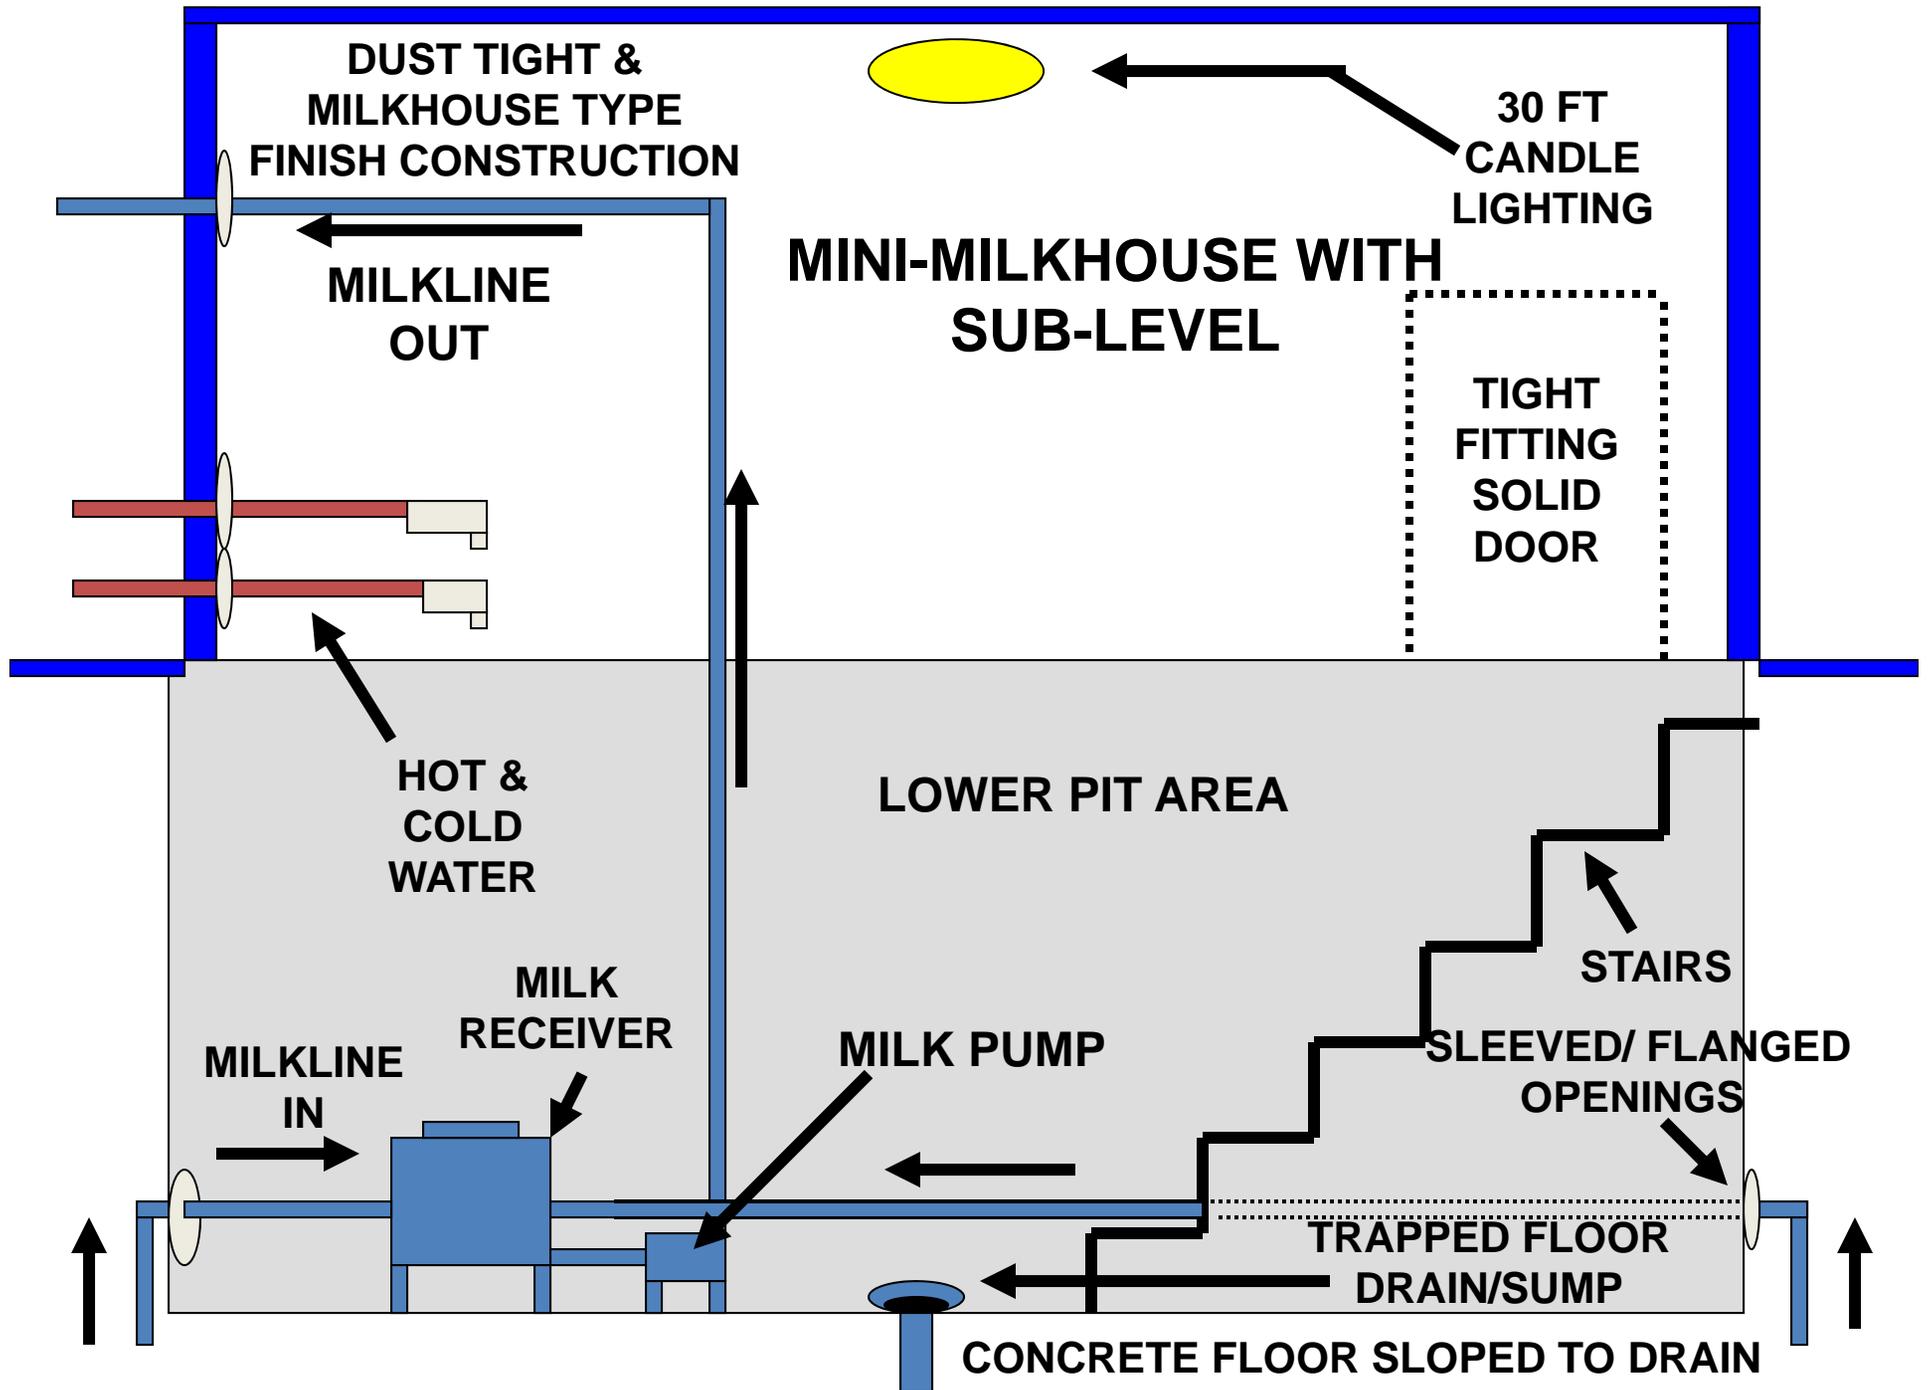

- Milk Receiver**
- Milk Pump**
- Milk Line Drain**
- Moisture Trap**

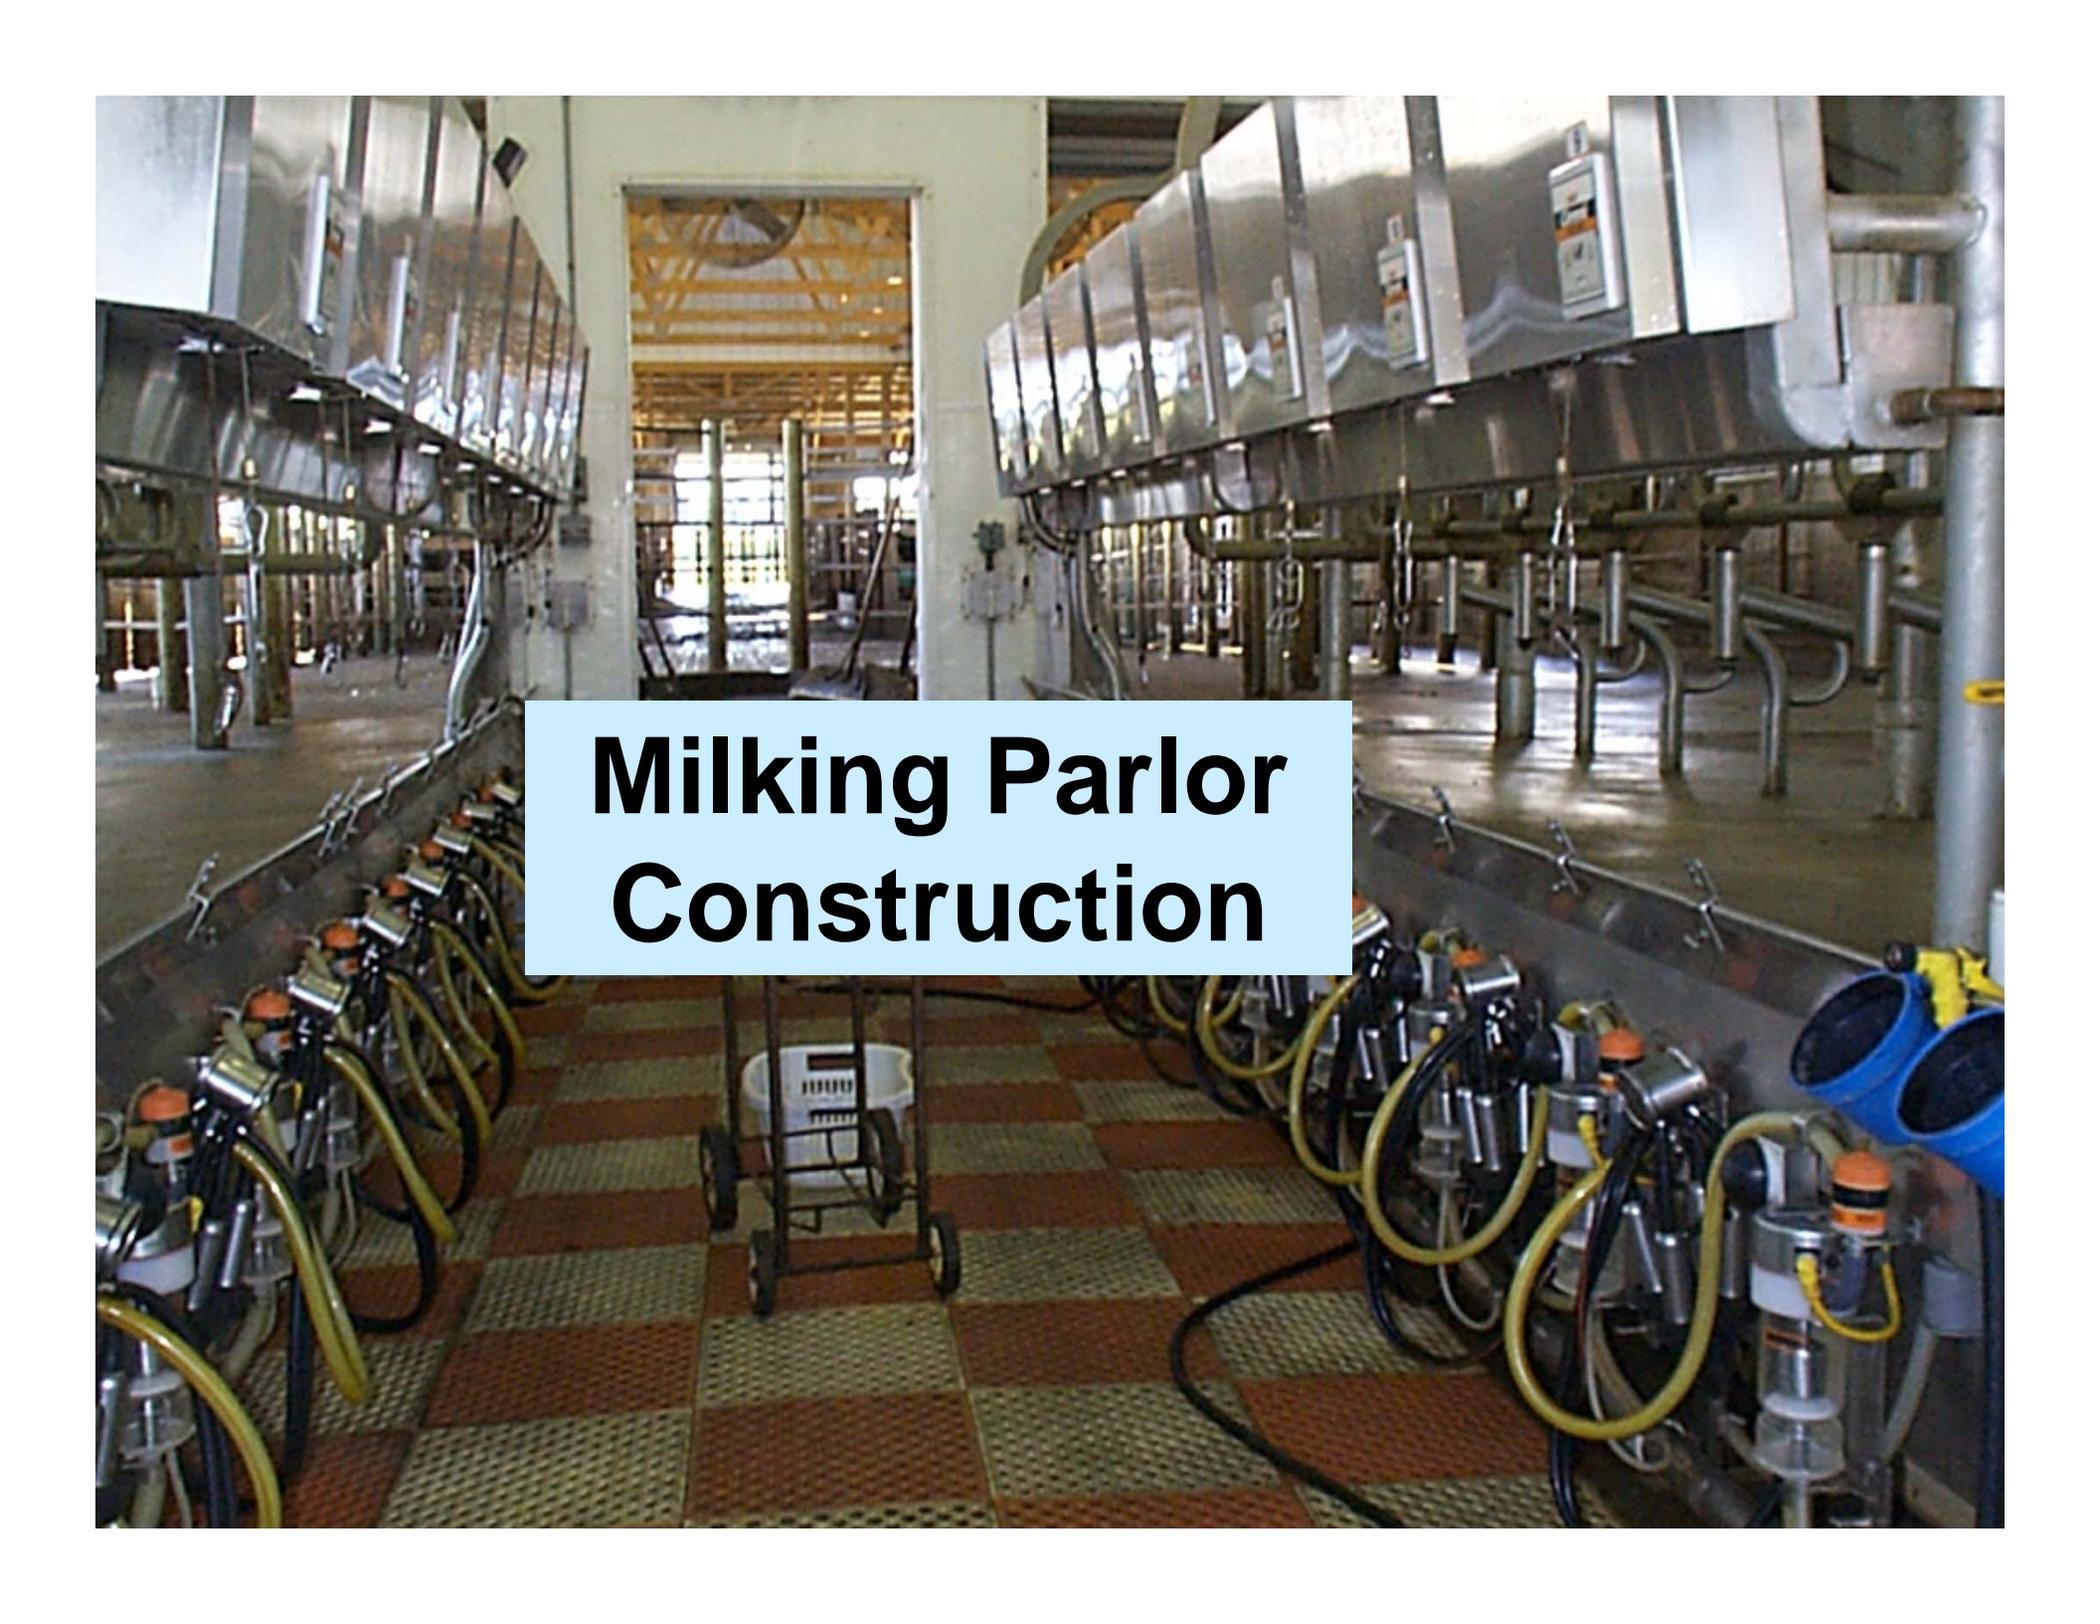

## **•Construction Requirements:**

- Provide 30 Ft-Candles of Light**
- Walls, Floor, & Ceiling to Comply With Milkhouse Standards**
- Provide Trapped Floor Drain**
- Adequate Room For Service & Inspection (Always Accessible)**
- Access Can be From Milking Barn**
- All Access Points Into Structure to be Dust Tight**
- Provide Hot & Cold Running Water**

# MINI-MILKHOUSE ACCESSED FROM MILKING BARN (WALK-IN TYPE)

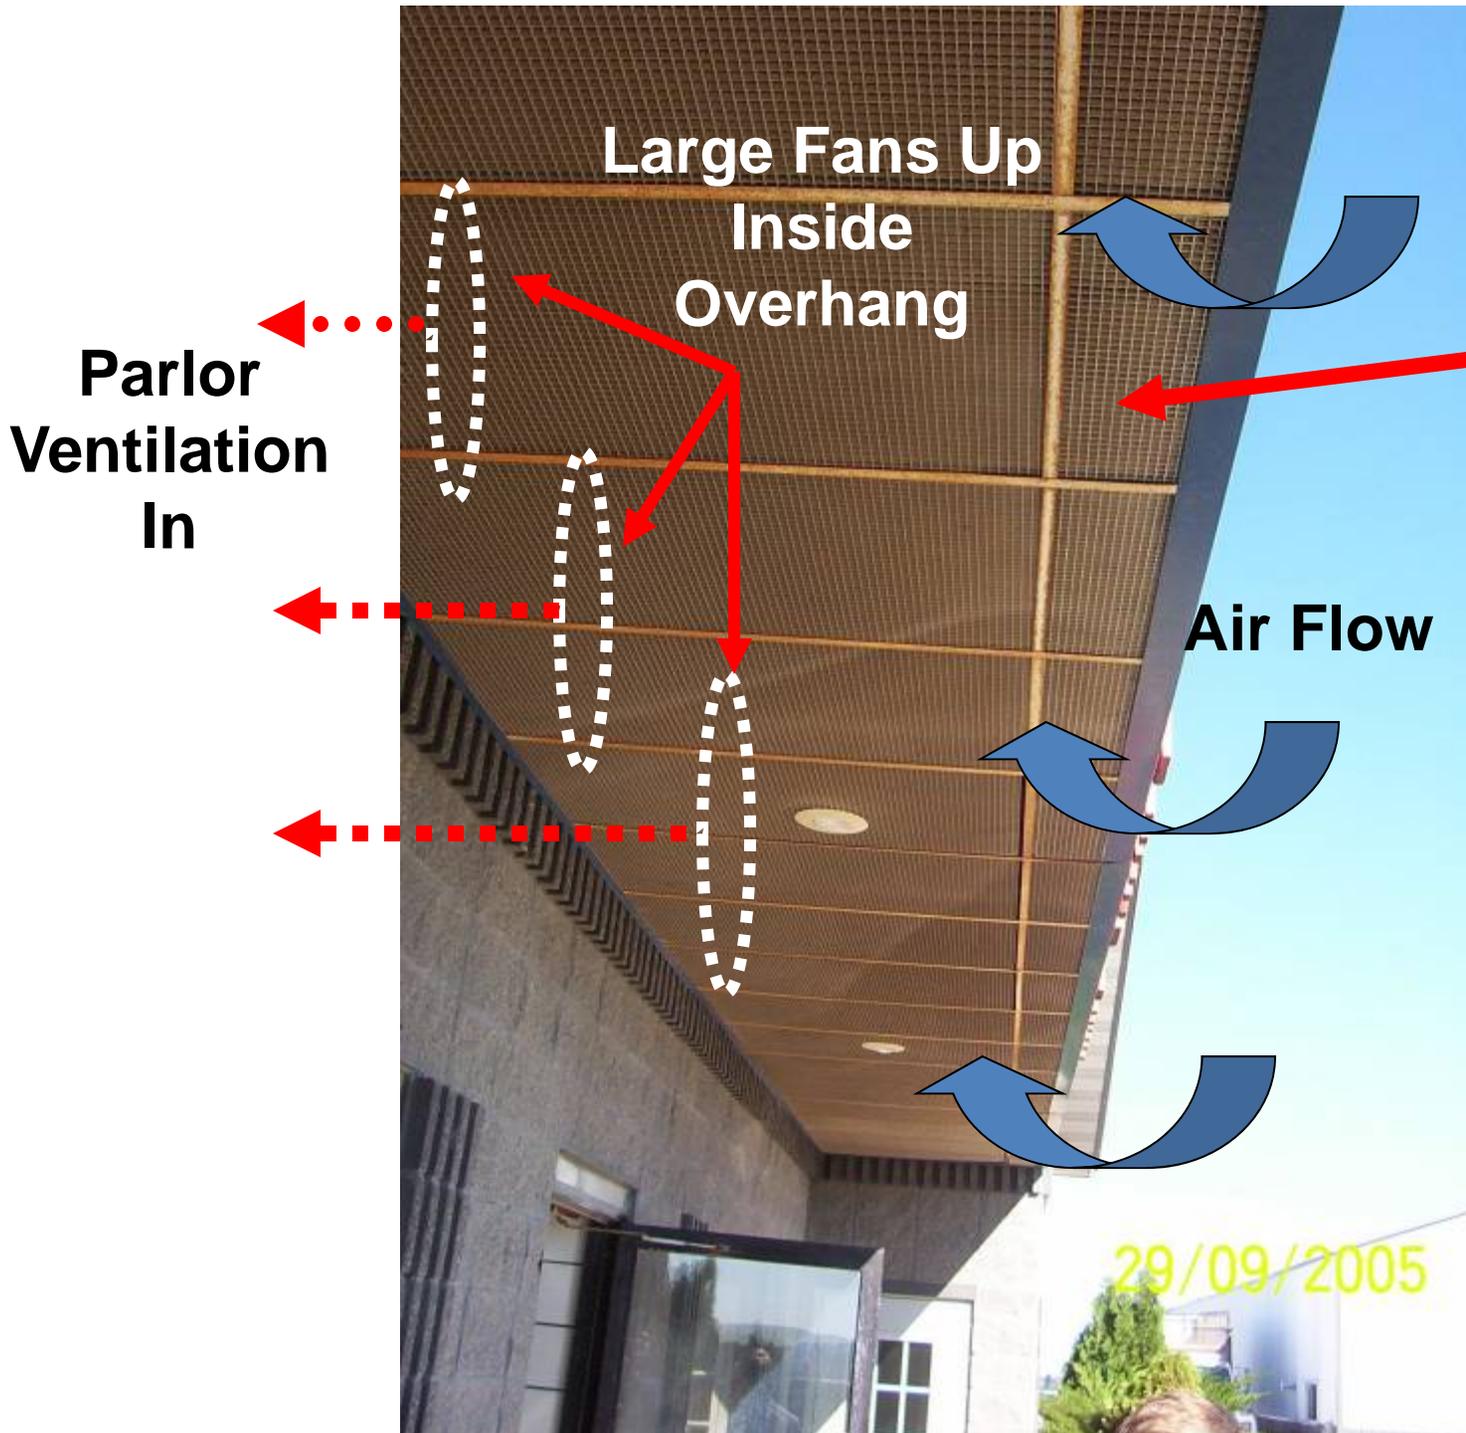

# Milking Parlor Construction

## **Clean In Place Parlor:**

- All Room Finishes to Meet Milkhouse Standards
- Outside Doors Kept Closed and Windows Screened
- Adequate Ventilation Even When Cow Entrance Doors Are Closed
- Only in This Type of Parlor May the Milk Receiver be Located and the Milking Units be Cleaned & Stored
- All Doors to Cattle Housing Must be Closed After Milking & Remain Closed Until the Next Milking

**A Plastic Grid Covering the ventilation over hang to a Parlor is allowed. Pest Entrance Does Not Appear to be a Concern With This Type of Ventilation**

## **Cow Entrance Doors Into Clean In Place Parlors:**

- **Must be Constructed of a Durable, Non-Absorbent, Solid Material**
- **The Door Must be Easy to Operate**
- **Must be Tight Fitting Along All Edges**

**If Reinforced Plastic or Other Suitable Flexible Material is Used:**

- The Edges Must be Held Tightly in Place by the Use of a Track or Other Easy & Effective Means
- Velcro Has Been Shown to be Ineffective for This Application, (Not Durable)

**Plastic Strip Curtains Are Not Acceptable as the Sole Method of Room Separation**

APR 4 2005

**Holding or Crowd Areas Just Outside the Parlor Typically do Not Meet the Sanitation & Construction Standards of a Clean in Place Parlor**

**The Cow Entrance Doors Need to be Located Between This Area and the Parlor.**

**Parlor Doors** 

**30/09/2005**

**Semi-Solid Waste Lift Stations Located in Milking Parlor Basements Must be Properly Vented to the Outside Environment to Prevent the Build Up of Potentially Deadly Methane Gas**

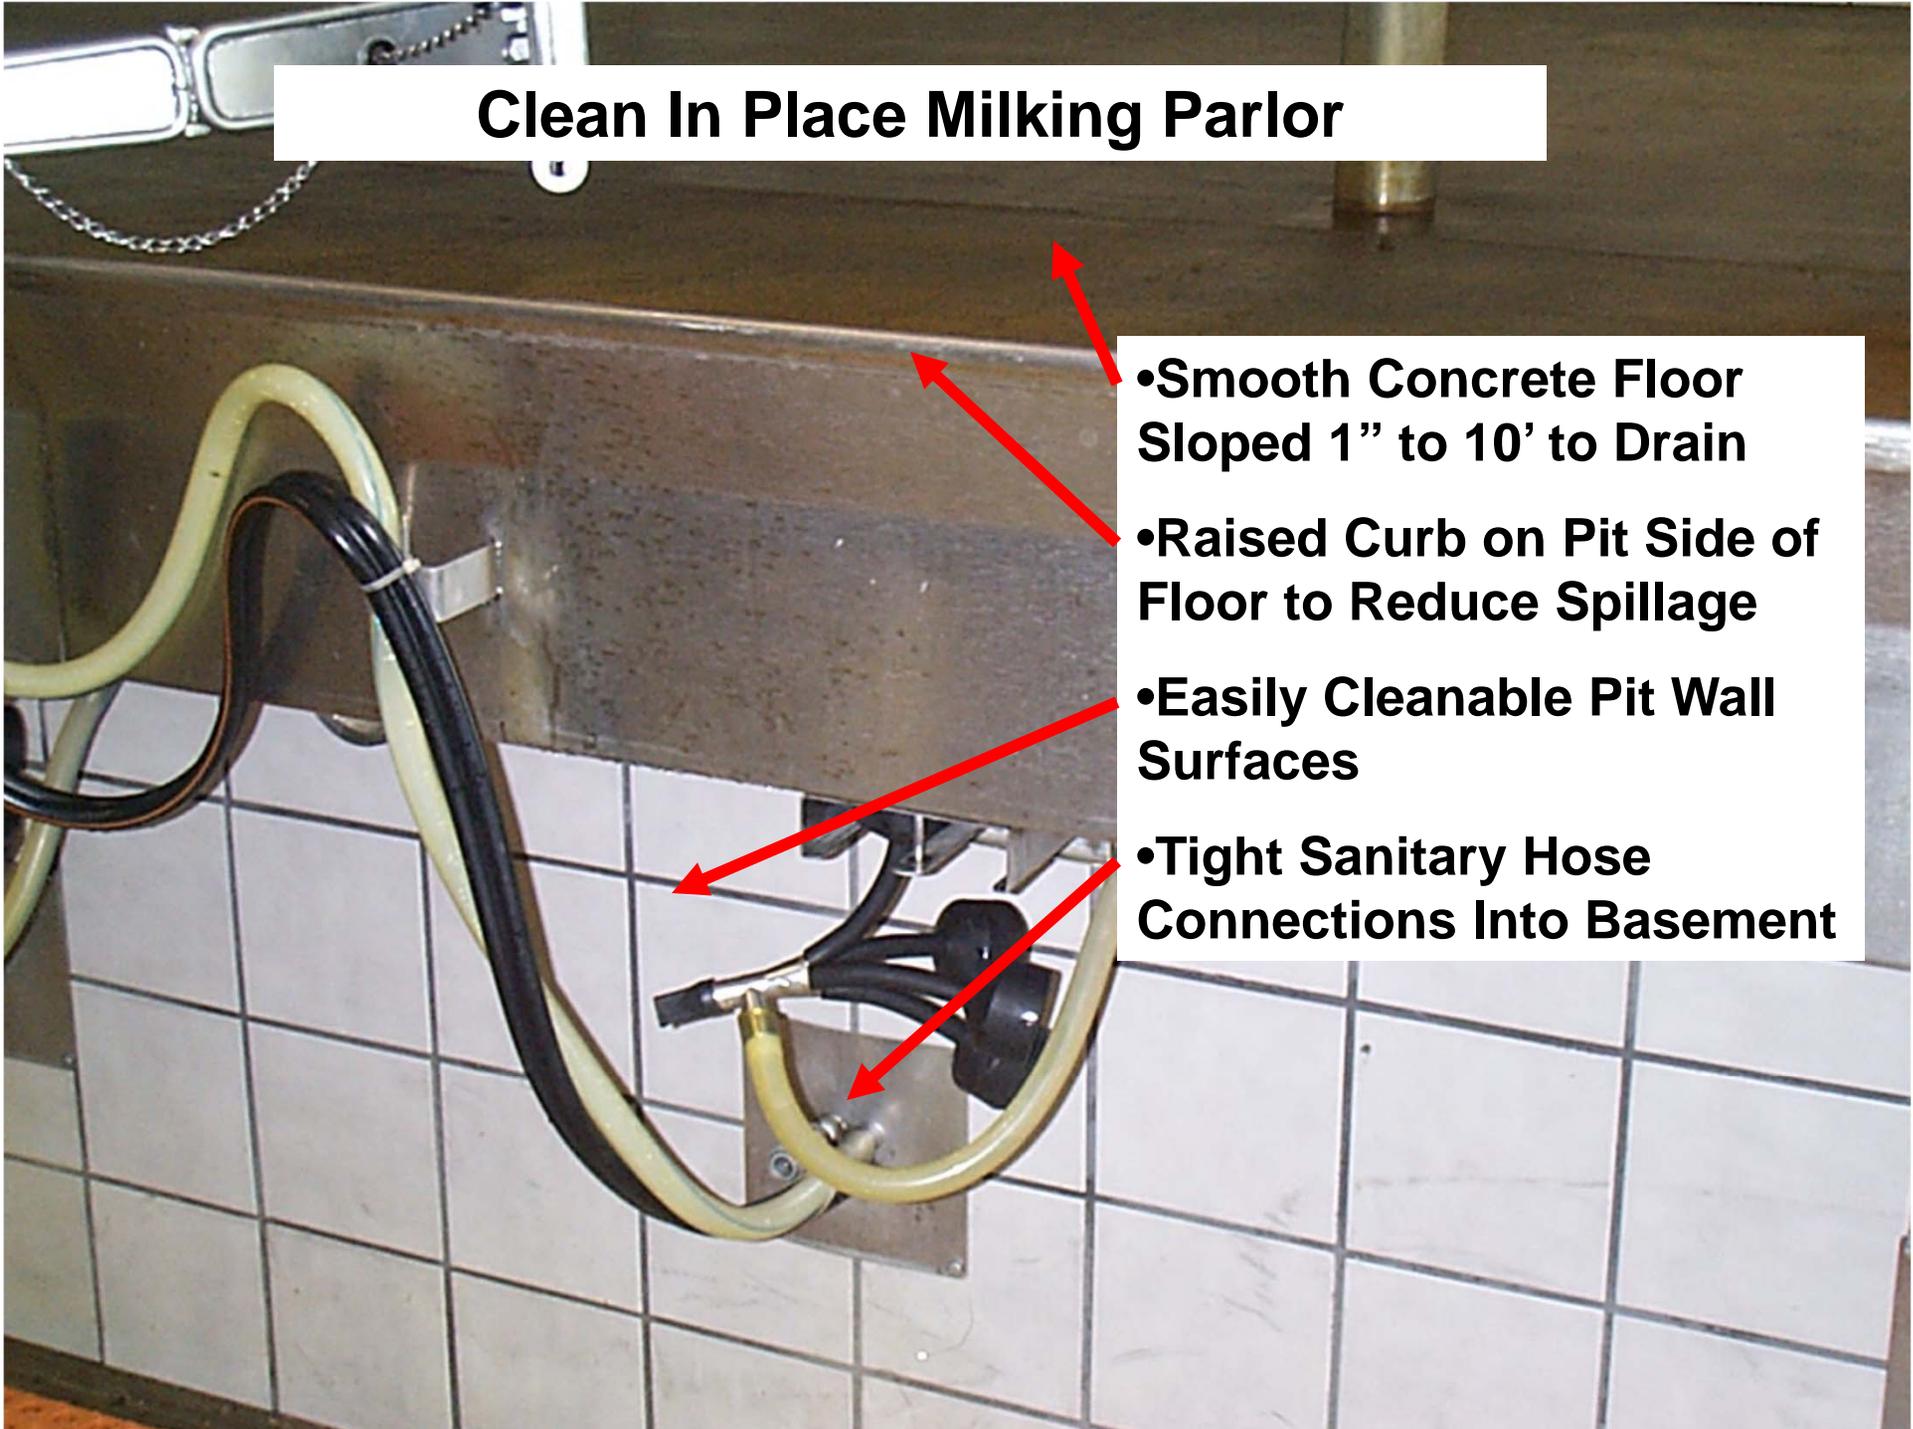

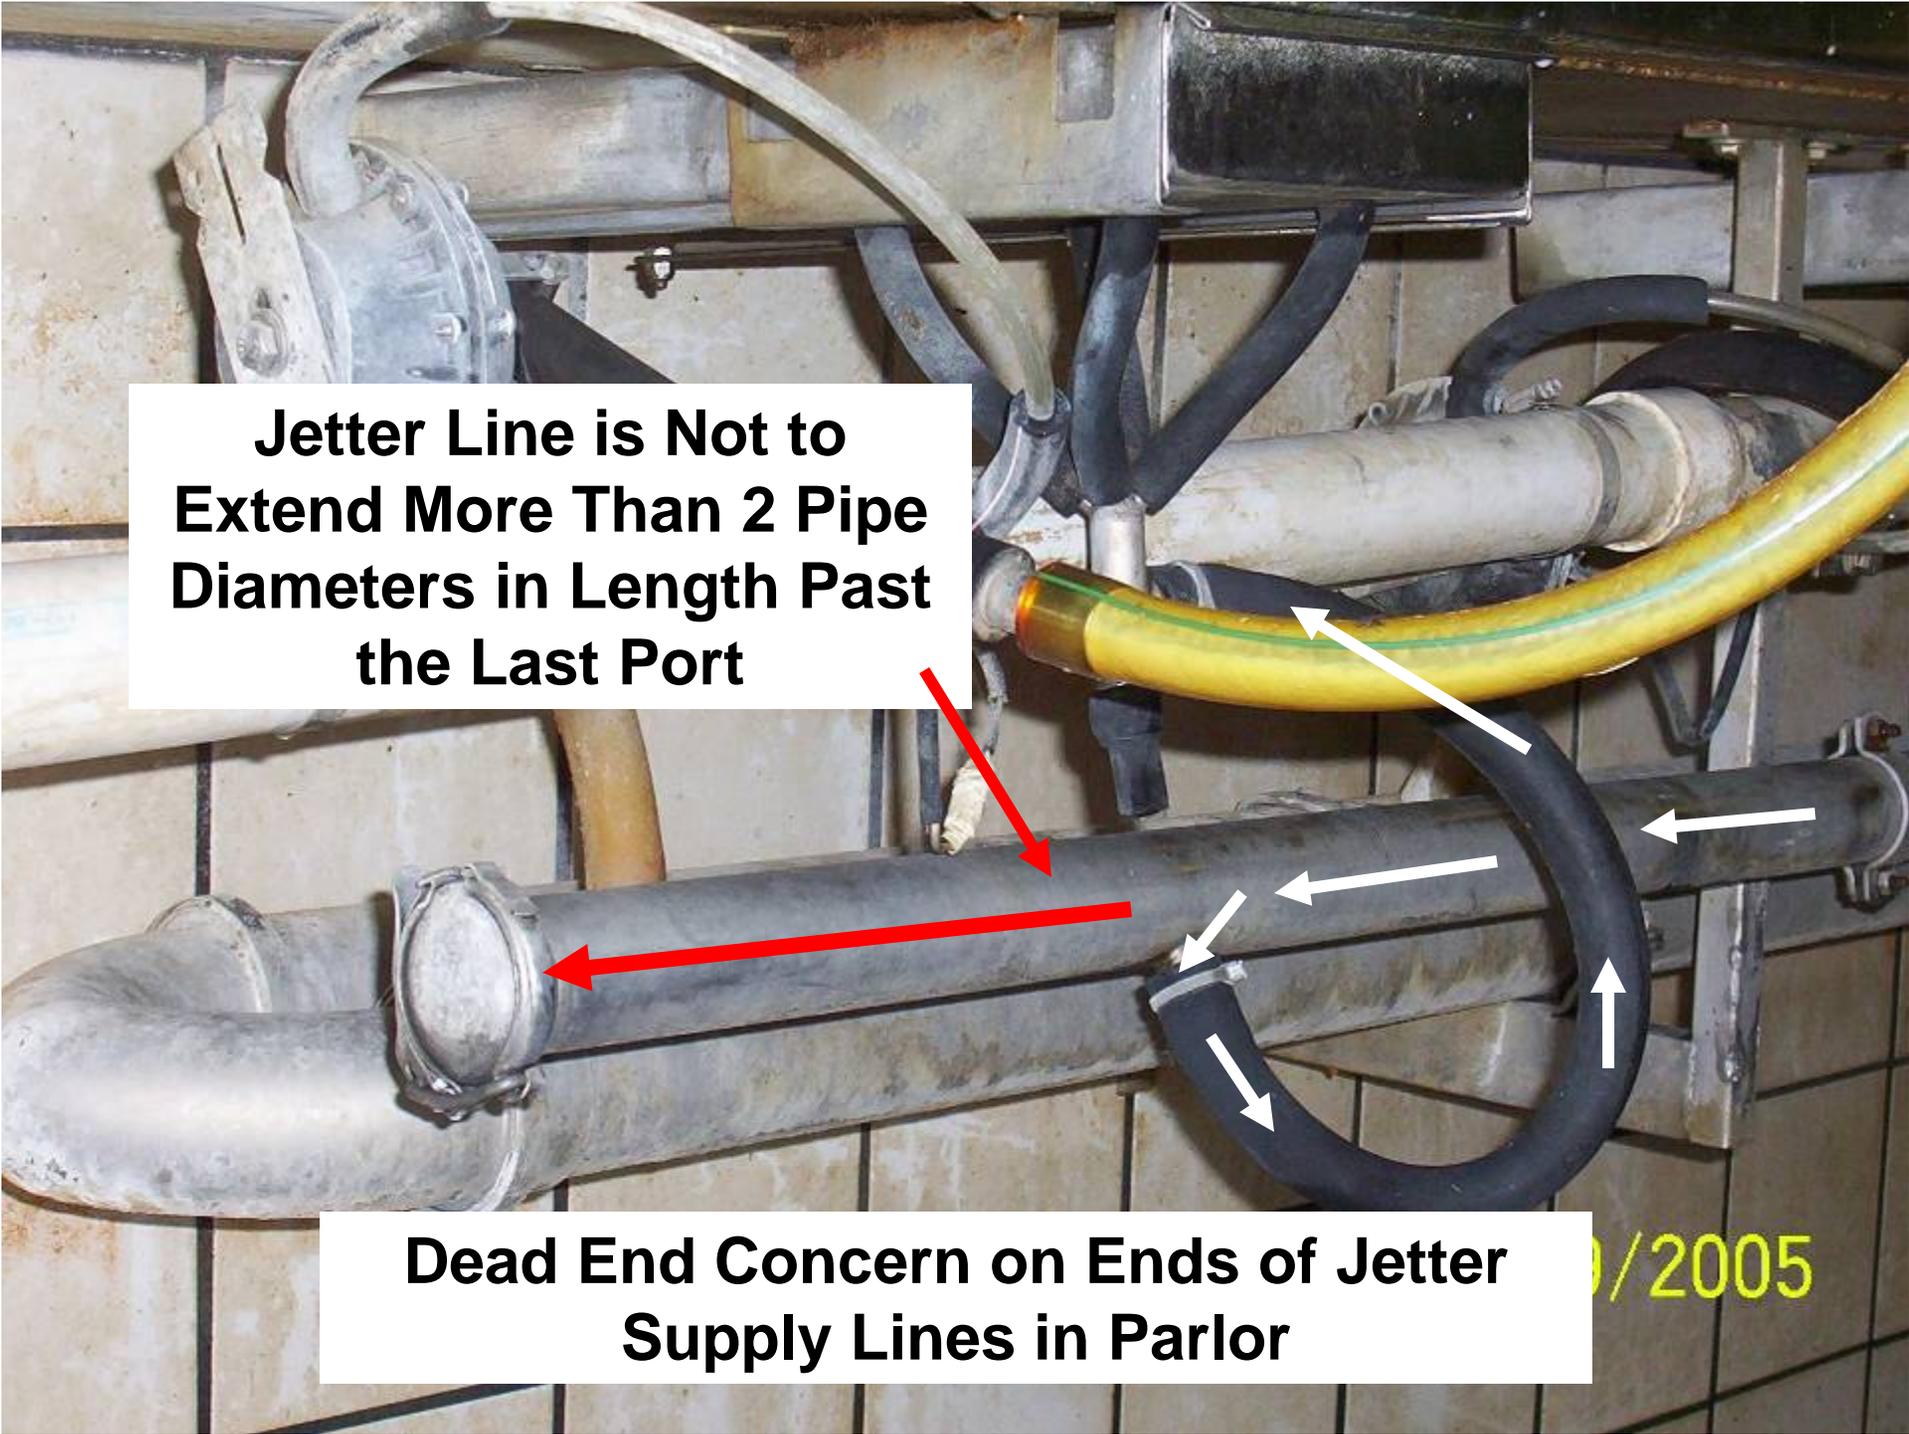

**Basement Areas Need to be Properly  
Constructed & Maintained (As Shown in This  
Photo) Because They Are Either Considered  
Milkhouse or CIP Parlor**

9/2005

## Clean In Place Milking Parlor

- Smooth Concrete Floor Sloped 1" to 10' to Drain
- Raised Curb on Pit Side of Floor to Reduce Spillage
- Easily Cleanable Pit Wall Surfaces
- Tight Sanitary Hose Connections Into Basement

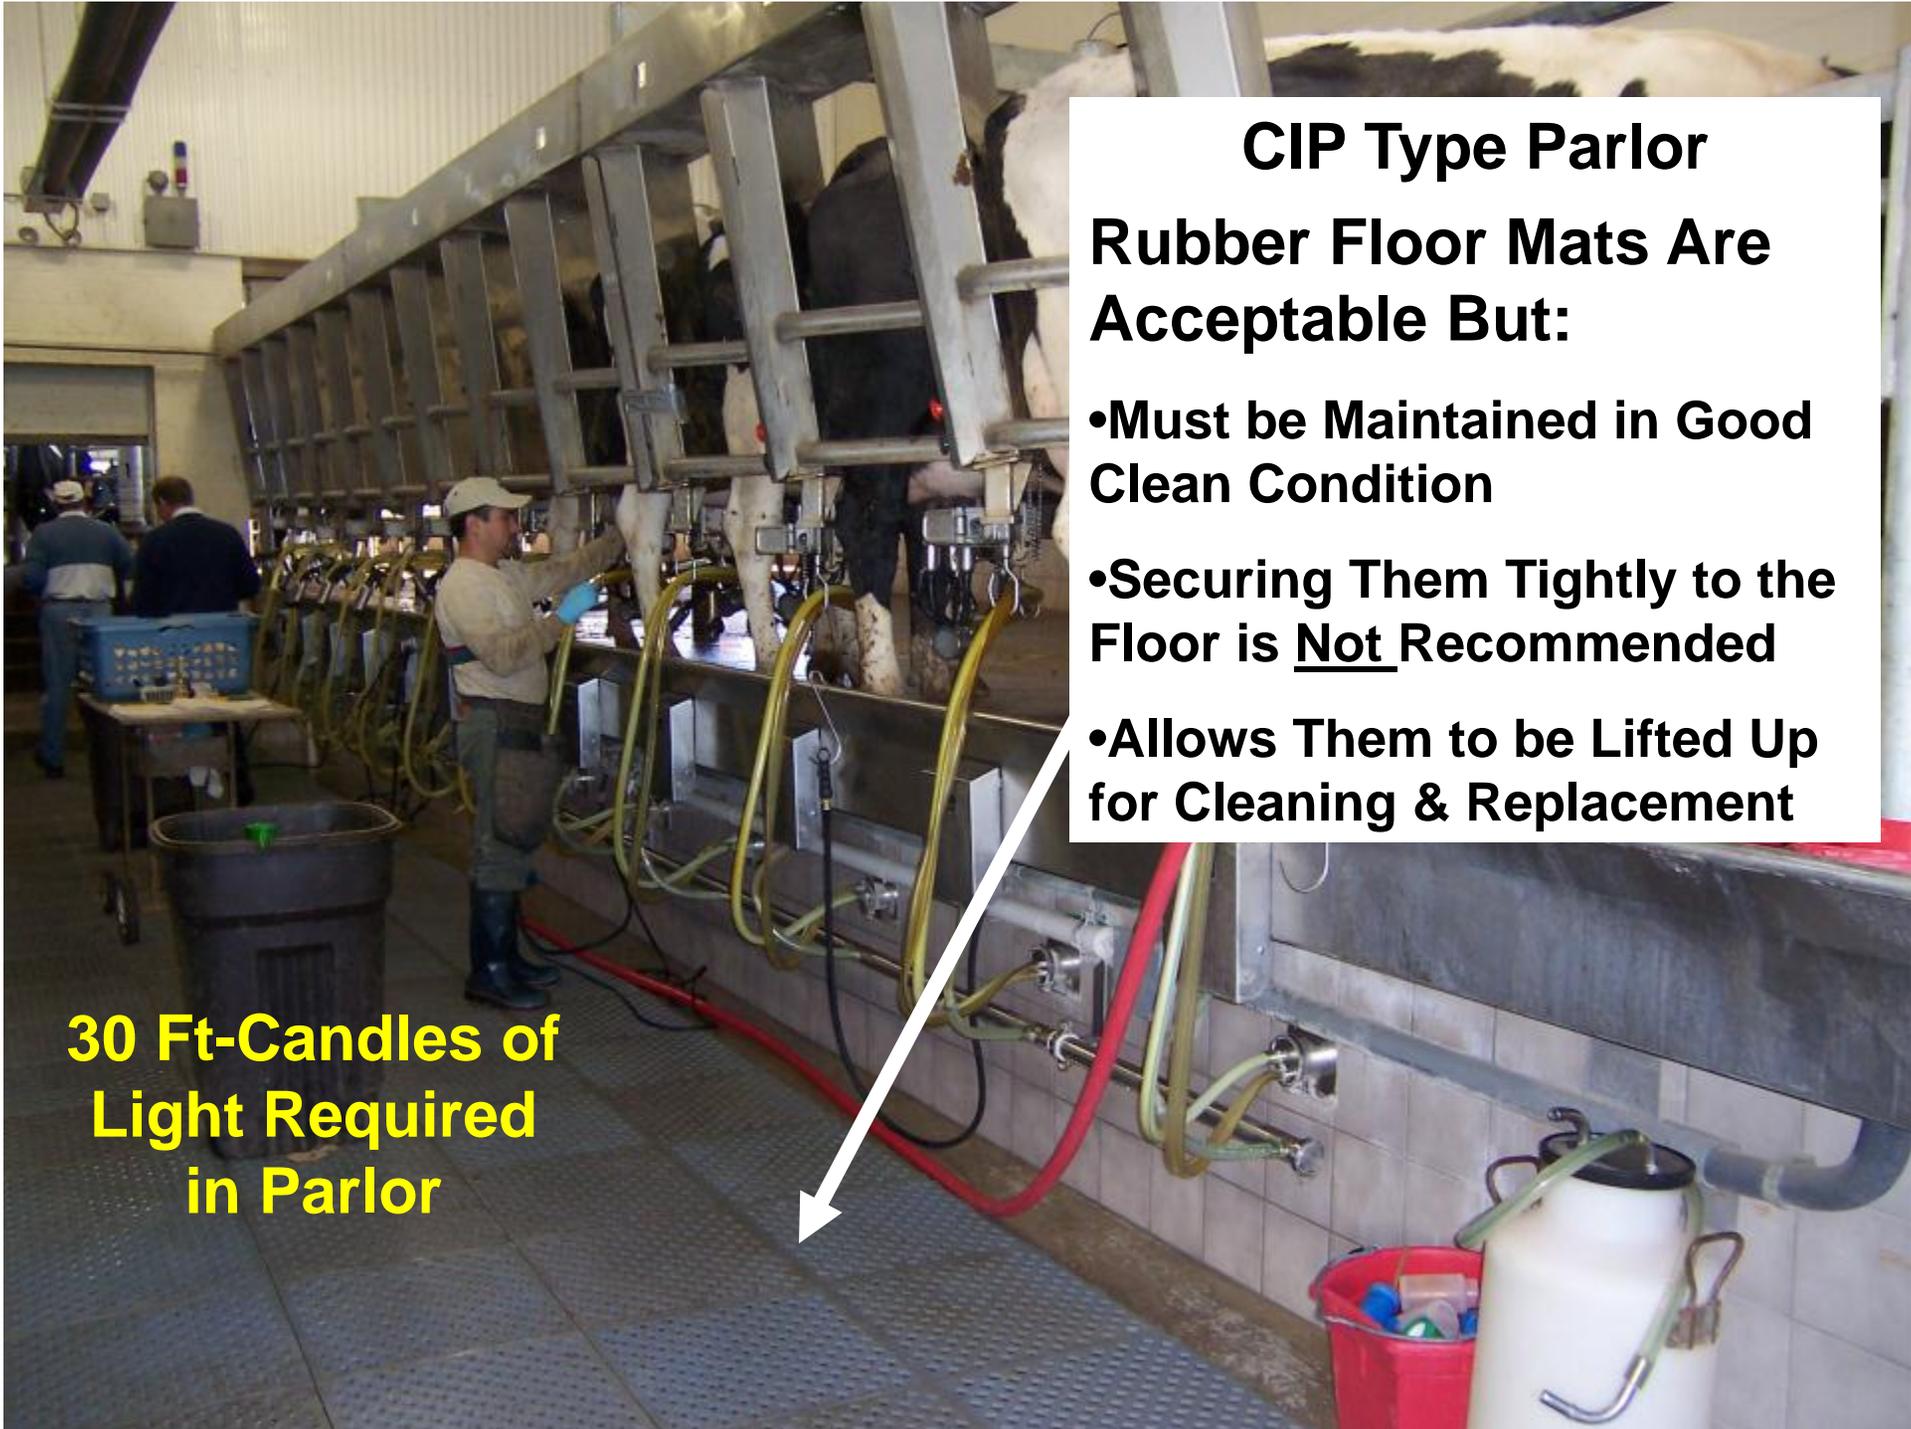

**Jetter Line is Not to  
Extend More Than 2 Pipe  
Diameters in Length Past  
the Last Port**

**Dead End Concern on Ends of Jetter  
Supply Lines in Parlor**

0/2005

## CIP Type Parlor

**Rubber Floor Mats Are Acceptable But:**

- **Must be Maintained in Good Clean Condition**
- **Securing Them Tightly to the Floor is Not Recommended**
- **Allows Them to be Lifted Up for Cleaning & Replacement**

**30 Ft-Candles of Light Required in Parlor**

# Conversion of Stanchion Barn to Milking Parlor

- Cover Gutter or fill with concrete
- Milk house drain line to gutter not permitted.

## **Traditional Flat Barn Parlor:**

- **Can Be Flat, Raised Platform, or Full Depth Pit**
- **Units Are Washed & Stored in Milkhouse**
- **Milk Receiver Must be in Milkhouse or in Complying Mini-Milkhouse**
- **Facility Meets Milking Barn Standards**

# Traditional Flat Barn Parlor

From CIP Wash Vat

Sanitary Stainless CIP Supply Line

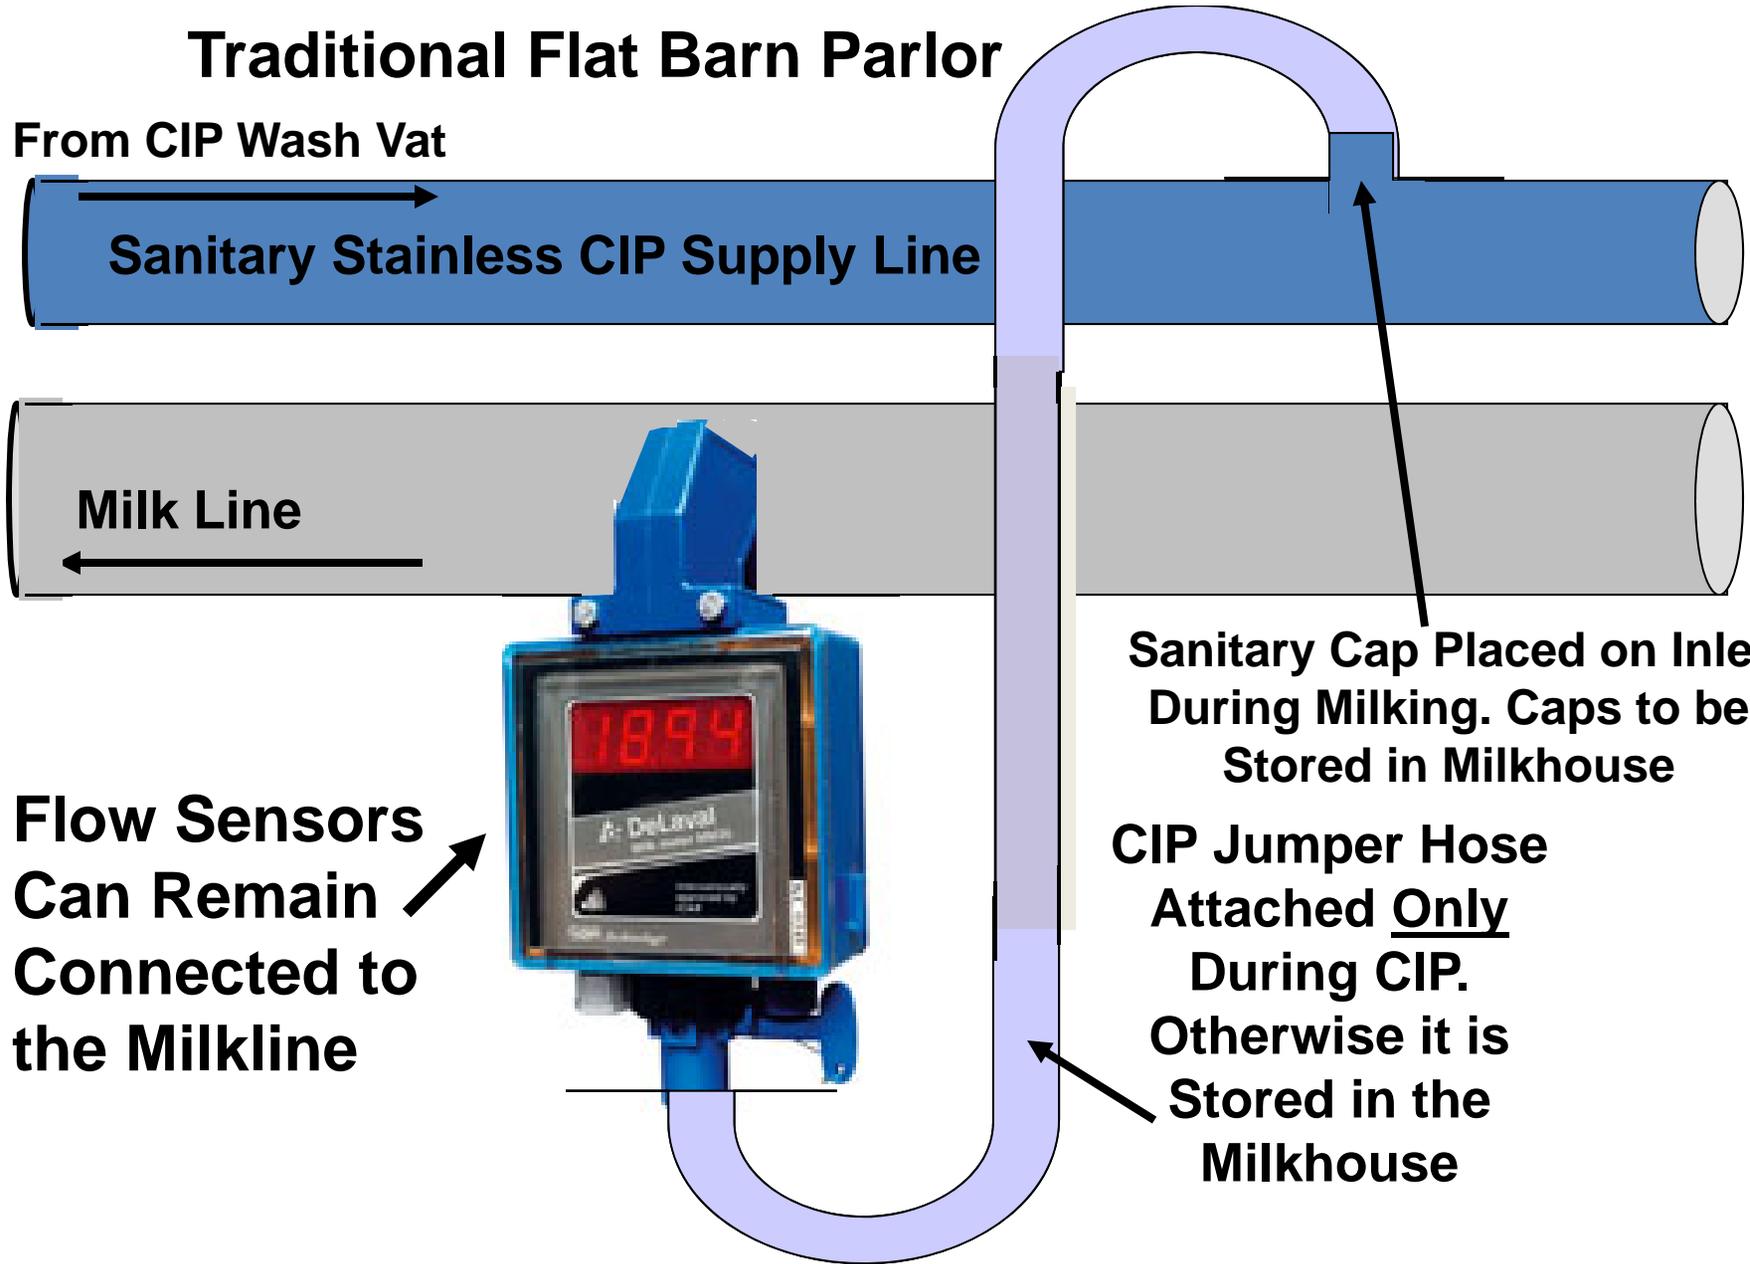

Milk Line

Sanitary Cap Placed on Inlet During Milking. Caps to be Stored in Milkhouse

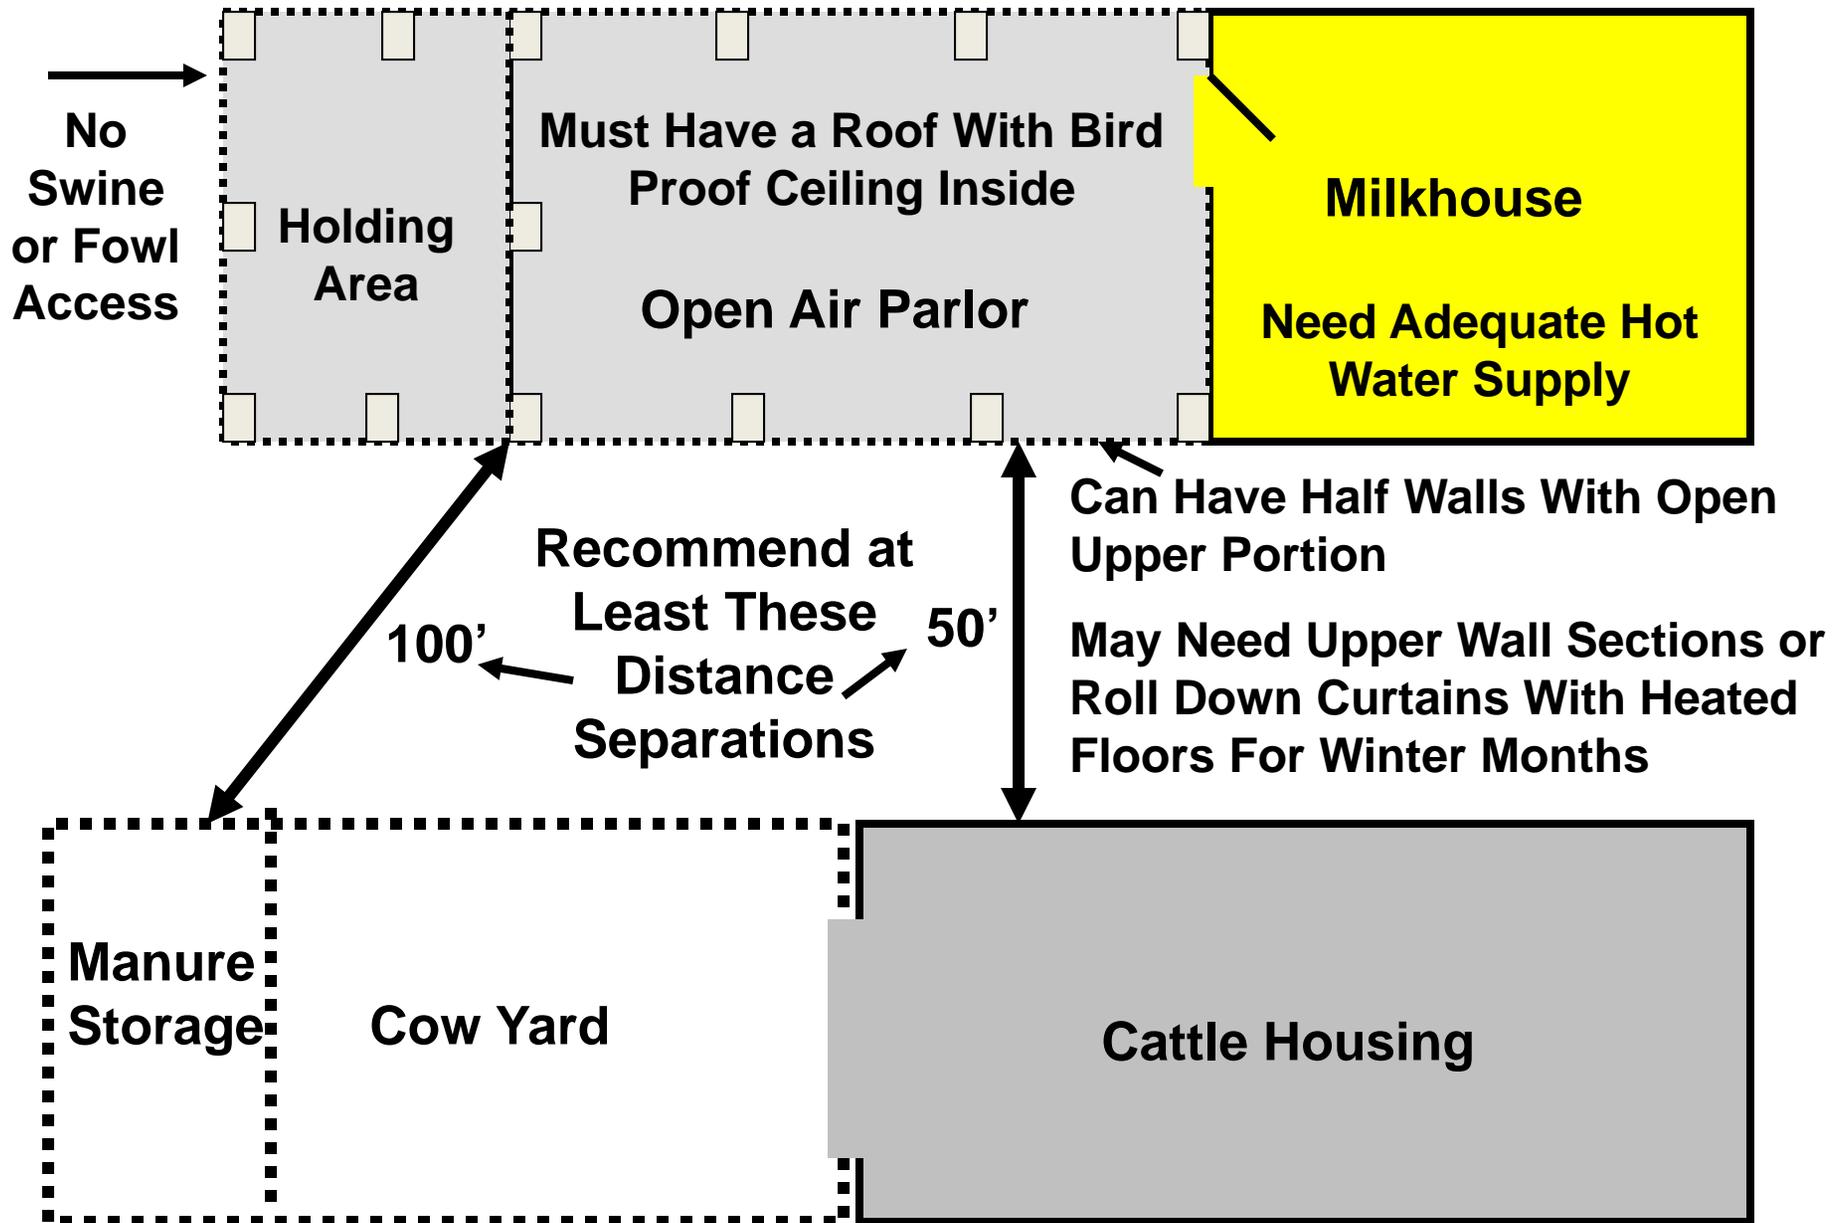

Flow Sensors Can Remain Connected to the Milking Unit

CIP Jumper Hose Attached Only During CIP. Otherwise it is Stored in the Milkhouse

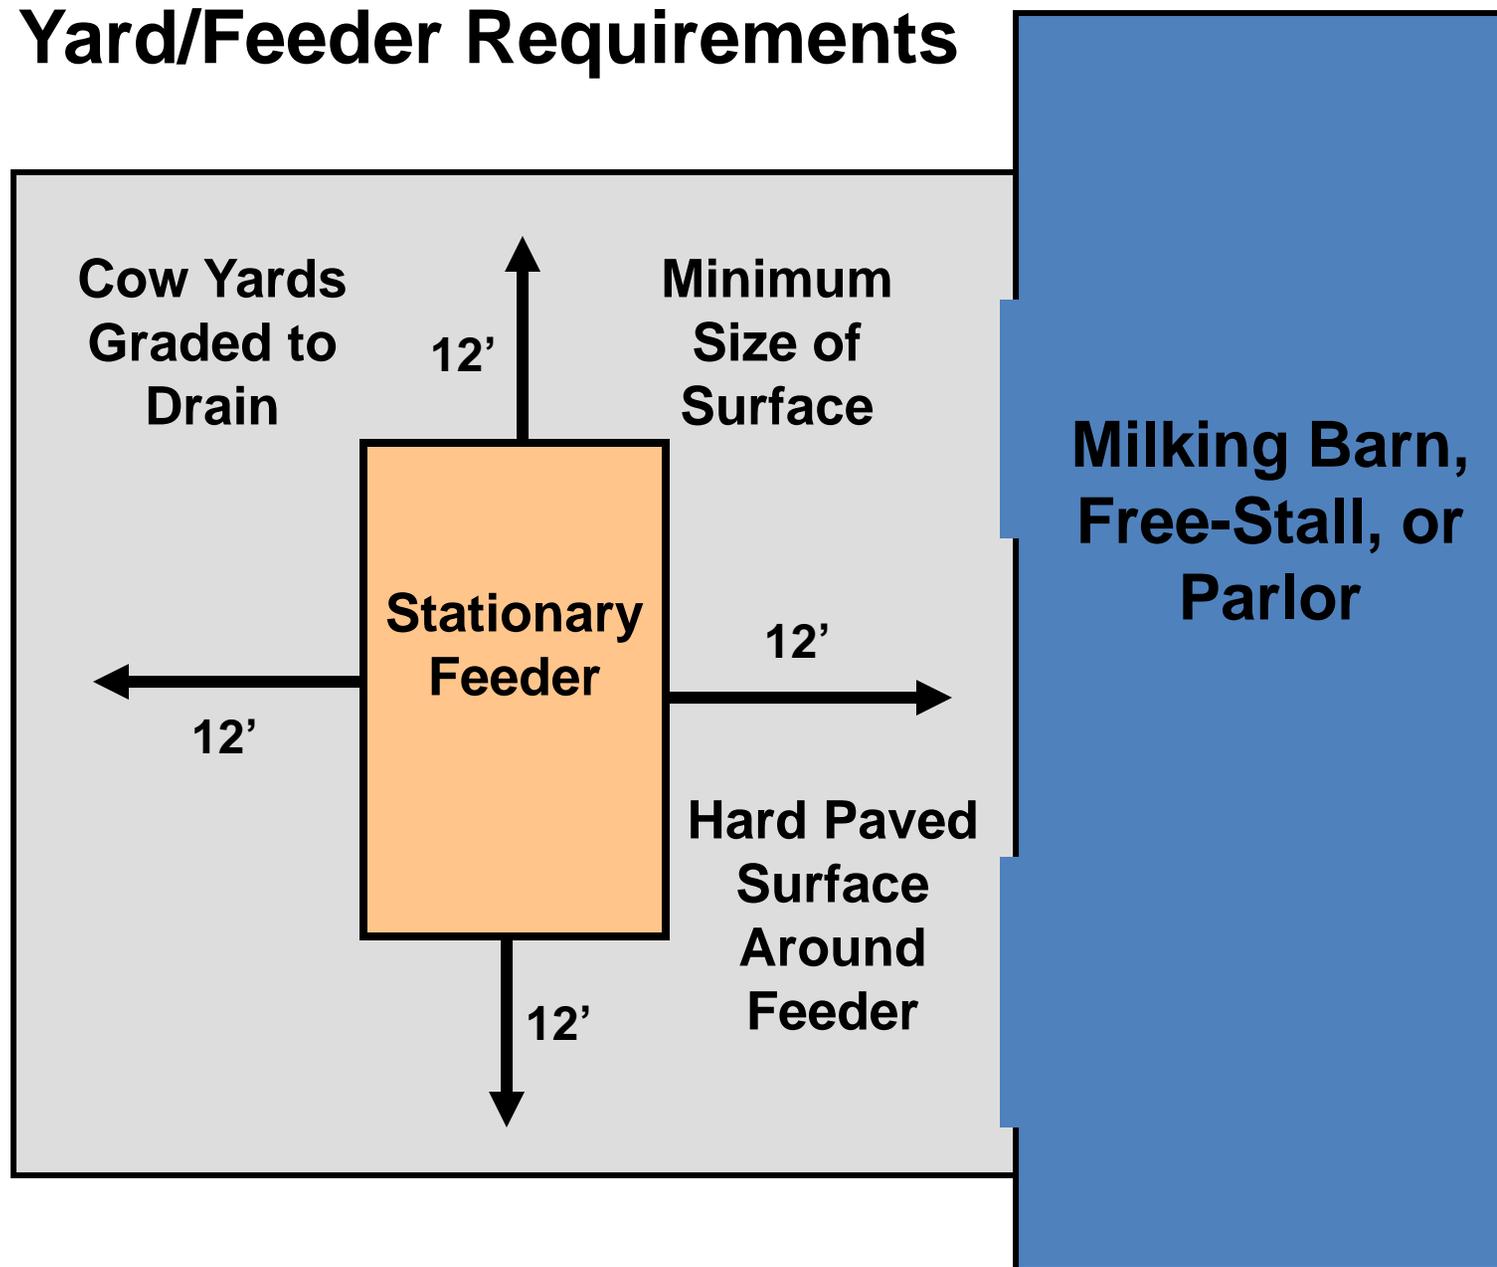

Remainder of Milking Unit is Washed & Stored in Milkhouse

# Rolled-on Fittings

- Effective January 1, 2001, recessless or rolled-on ferrules are no longer acceptable for most milking pipeline installations.
- 3-A Accepted Practice for the Design, Construction, and Installation of Milking and Milk Handling Equipment, Number 606-05 states that recessless or rolled-on fittings are acceptable only when modifying or repairing existing on-site farm milk handling systems with fittings installed with no cracks or crevices

# Rolled-on Fittings

- Rolled-on fittings acceptable when modifying or repairing existing on-site farm milk handling systems.
- Fittings shall be installed with no cracks or crevices.

# Rolled-On Fittings

## Q & A

When relocated to a different farm

- Existing fittings in good repair – accepted
- Existing fittings in poor repair – replace with a welded fitting.
- Changes to original pipeline configuration – new fittings are a welded fitting.

# Rolled-On Fittings

## Q & A

Modifications to existing milk handling system

- Existing fittings in good repair – accepted
- Existing fittings in poor repair – replace with a welded fitting.
- Changes to original pipeline configuration – new fittings are a welded fitting.

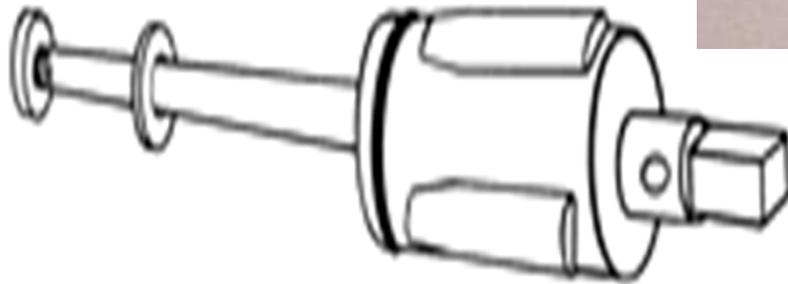

# Rolled-On Fittings

## Q & A

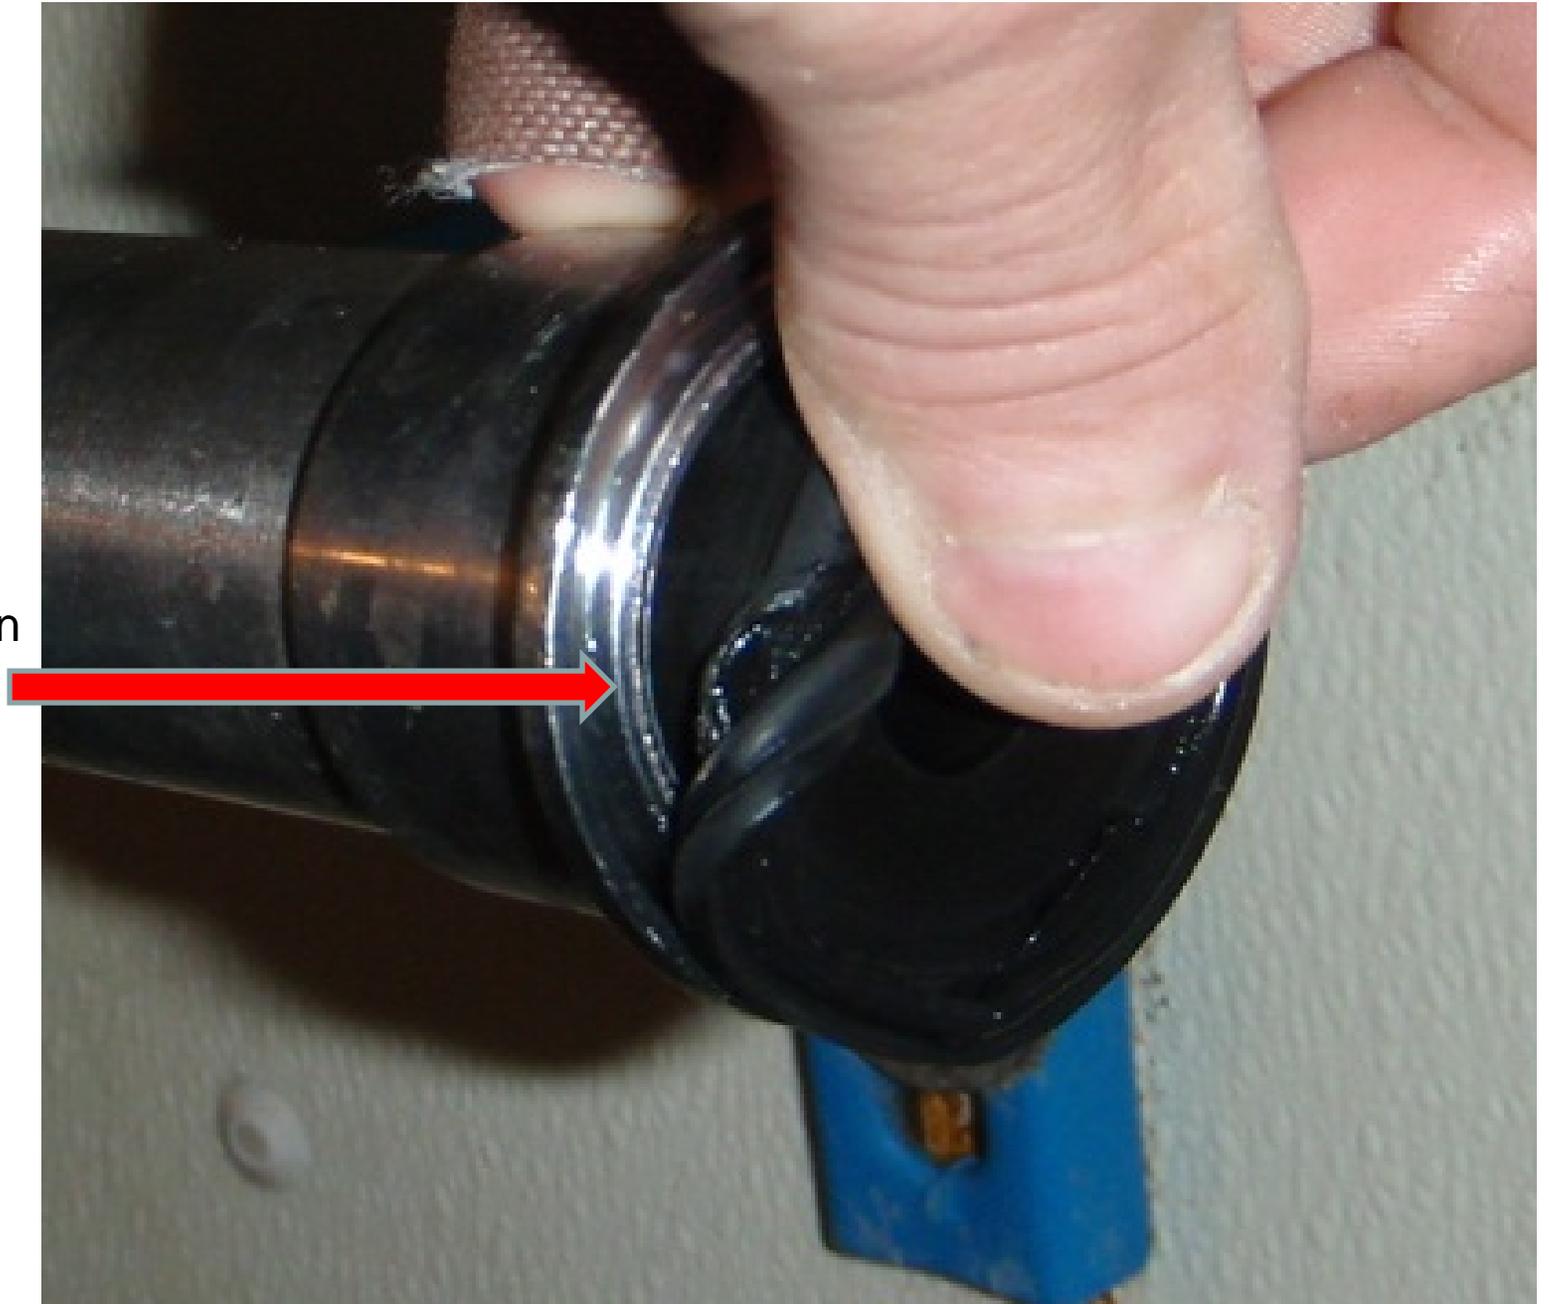

### Repairs to existing systems

- Acceptable for emergency repair only.
  - Considered a temporary repair.
- Replaced with a welded fitting as soon as practical.

# Rolled-on Ferrules

Improperly  
faced roll-on  
ferrule

# Bulk Tank

- CIP Cross-connections
- Recording Thermometers
- Agitator Protection
- Seasonal Storage

# Bulk Tank

- CIP Cross-Connection
  - Cleaning system cannot be connected to the bulk tank while milk is in the tank.

# Cross-Connection

# Mueller Sentry III

# CIP Set-up

- Install CIP cap on side panel.

# CIP Set-up

- Install plastic cap over outlet to trap cleaning solution and return it via the CIP pump.

# Milking Storage

**Installing Ring**

**Ring Installed**

# Milk Storage

**Milk line for bottom fill**

**Oops forgot the ring!!!**

# Milk Storage

- Follow Instructions
- Remove cap

# Recording Thermometers

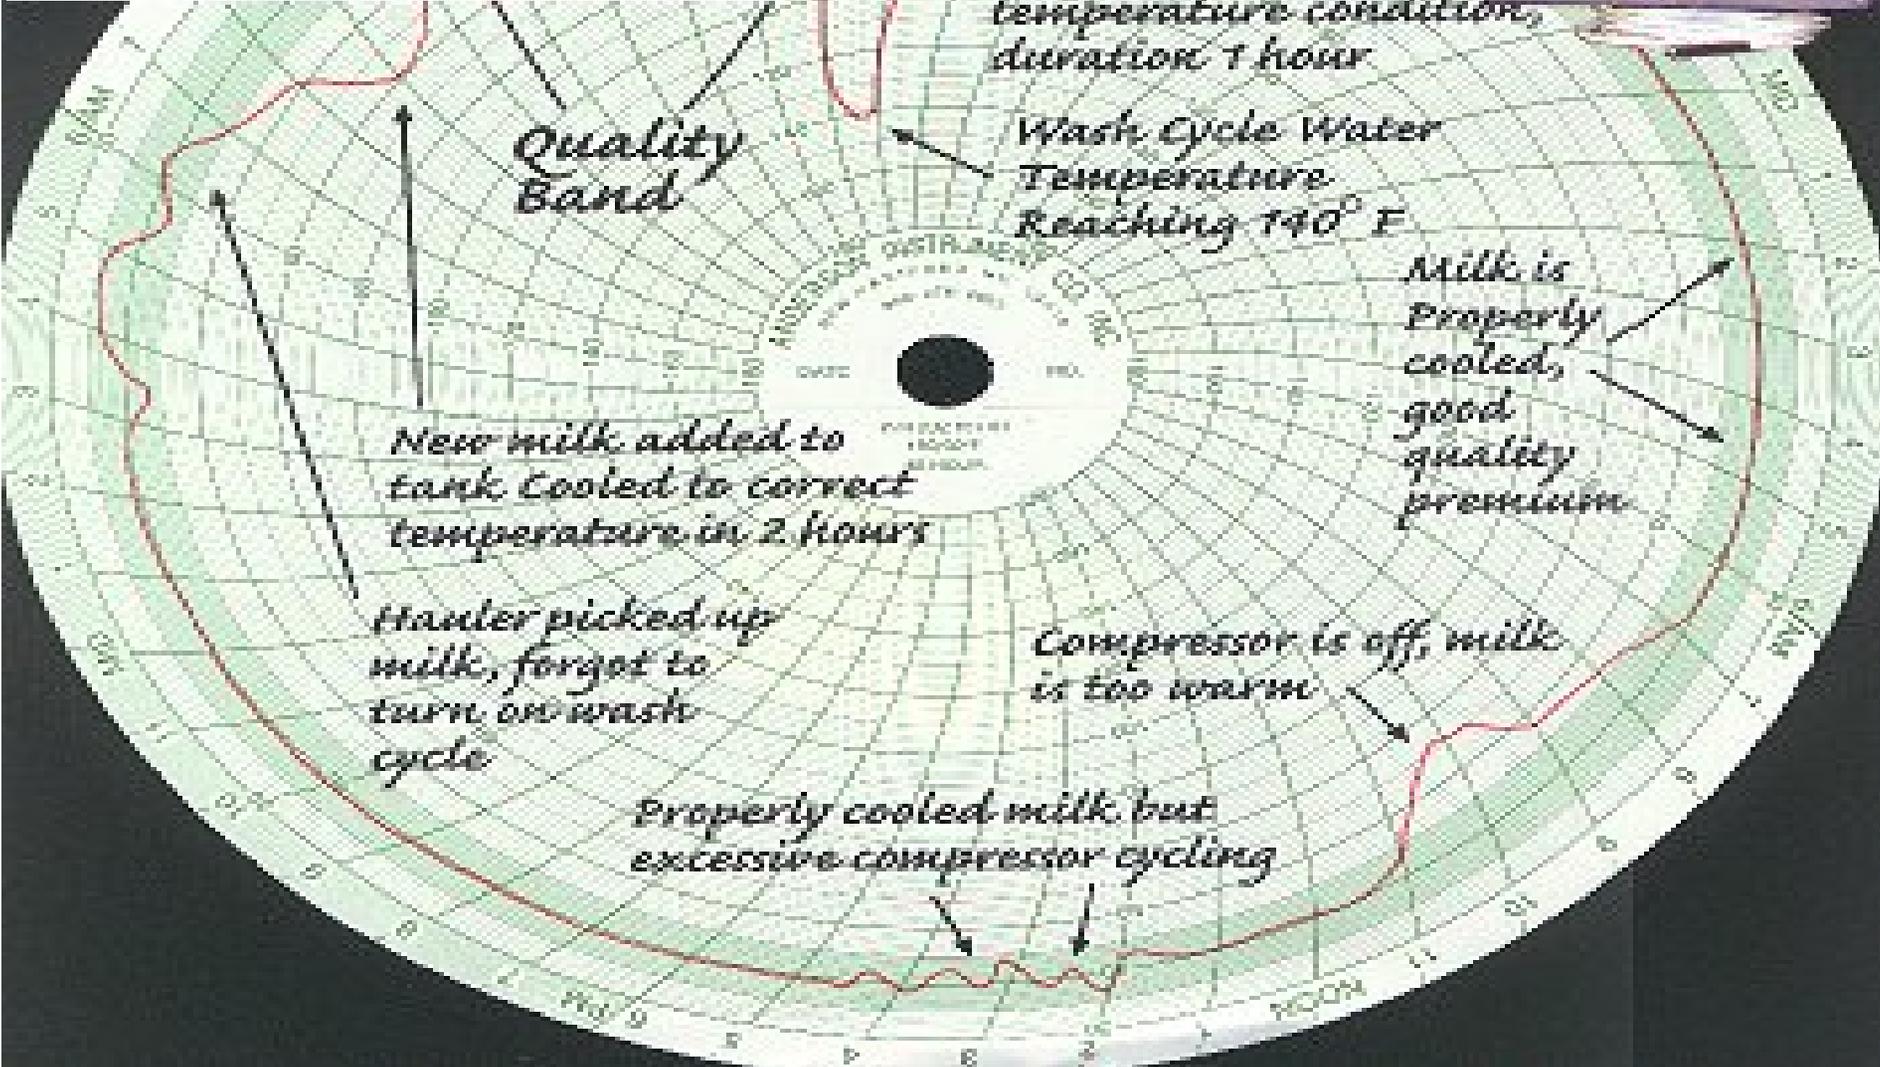

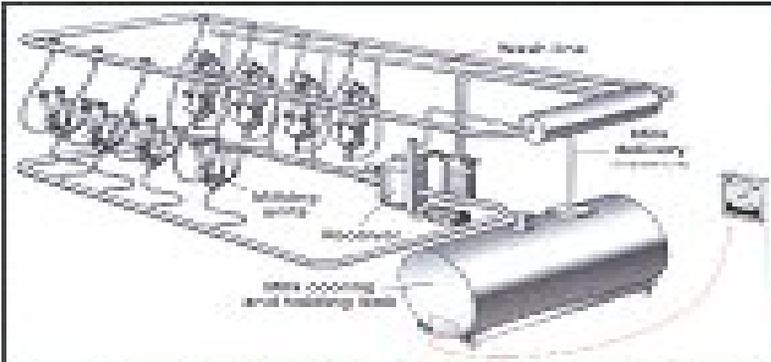

- Required on tanks manufactured after Jan 1, 2000
- Verified for accuracy within  $\pm 2^{\circ}$  F every six months by the dairy plant field representative and properly documented.
- Retain records for 6 months

# Bulk Tank Chart Requirements

- Range of at least 50° F
  - Including normal storage temperature  $\pm 5^{\circ}$  F
- Record temperatures to 180° F
- 2° F graduations below 100° F
- Maximum 7 day chart

# Bulk Tank Chart Annotations

- Producer
- Date
- Signature of the person removing the chart
- Tank Identification if more than one tank
- Unusual occurrences

# Bulk Tank Agitator Protection

# Seasonal Milk Storage

- Transfer from one bulk tank to another
- Utilize hard piping or seamless hose
- Transfer lines cleaned and sanitized prior to use
- Milk transferred without contamination
- Ability to properly clean and store transfer hose
- **Tank must have refrigeration!!!**

# Air to Milk Contact

- Air blow-down systems
- Air injectors for cleaning

# Product Air Blow Systems

# Receiver Jar Accessibility

## Milk Receiver Pits in Milkhouse:

- Need Drain or Sump
- Ample Size & Light
- Meets Milkhouse Finish Requirements
- Egress Into Pit From a Securely Mounted Ladder or Stairs

Pipeline Tunnel

Not This

APR 4 2005

# Food for Thought

- ATCP 60.10(6)(b) No manufacturer or distributor of milking or milk handling systems may sell, or distribute for sale in this state, any portion of a milking or milk handling system unless specifications or prototype equipment are first reviewed by the department.

# Questions

# **DIRECT TANKER DAIRY FARM REQUIREMENTS**

**Presenter  
FOOD & DAIRY SPECIALIST  
Lee Larsen**

# Direct Shipment of Milk

## Definition:

A facility in which a transportation tanker is used to store milk on the dairy farm.

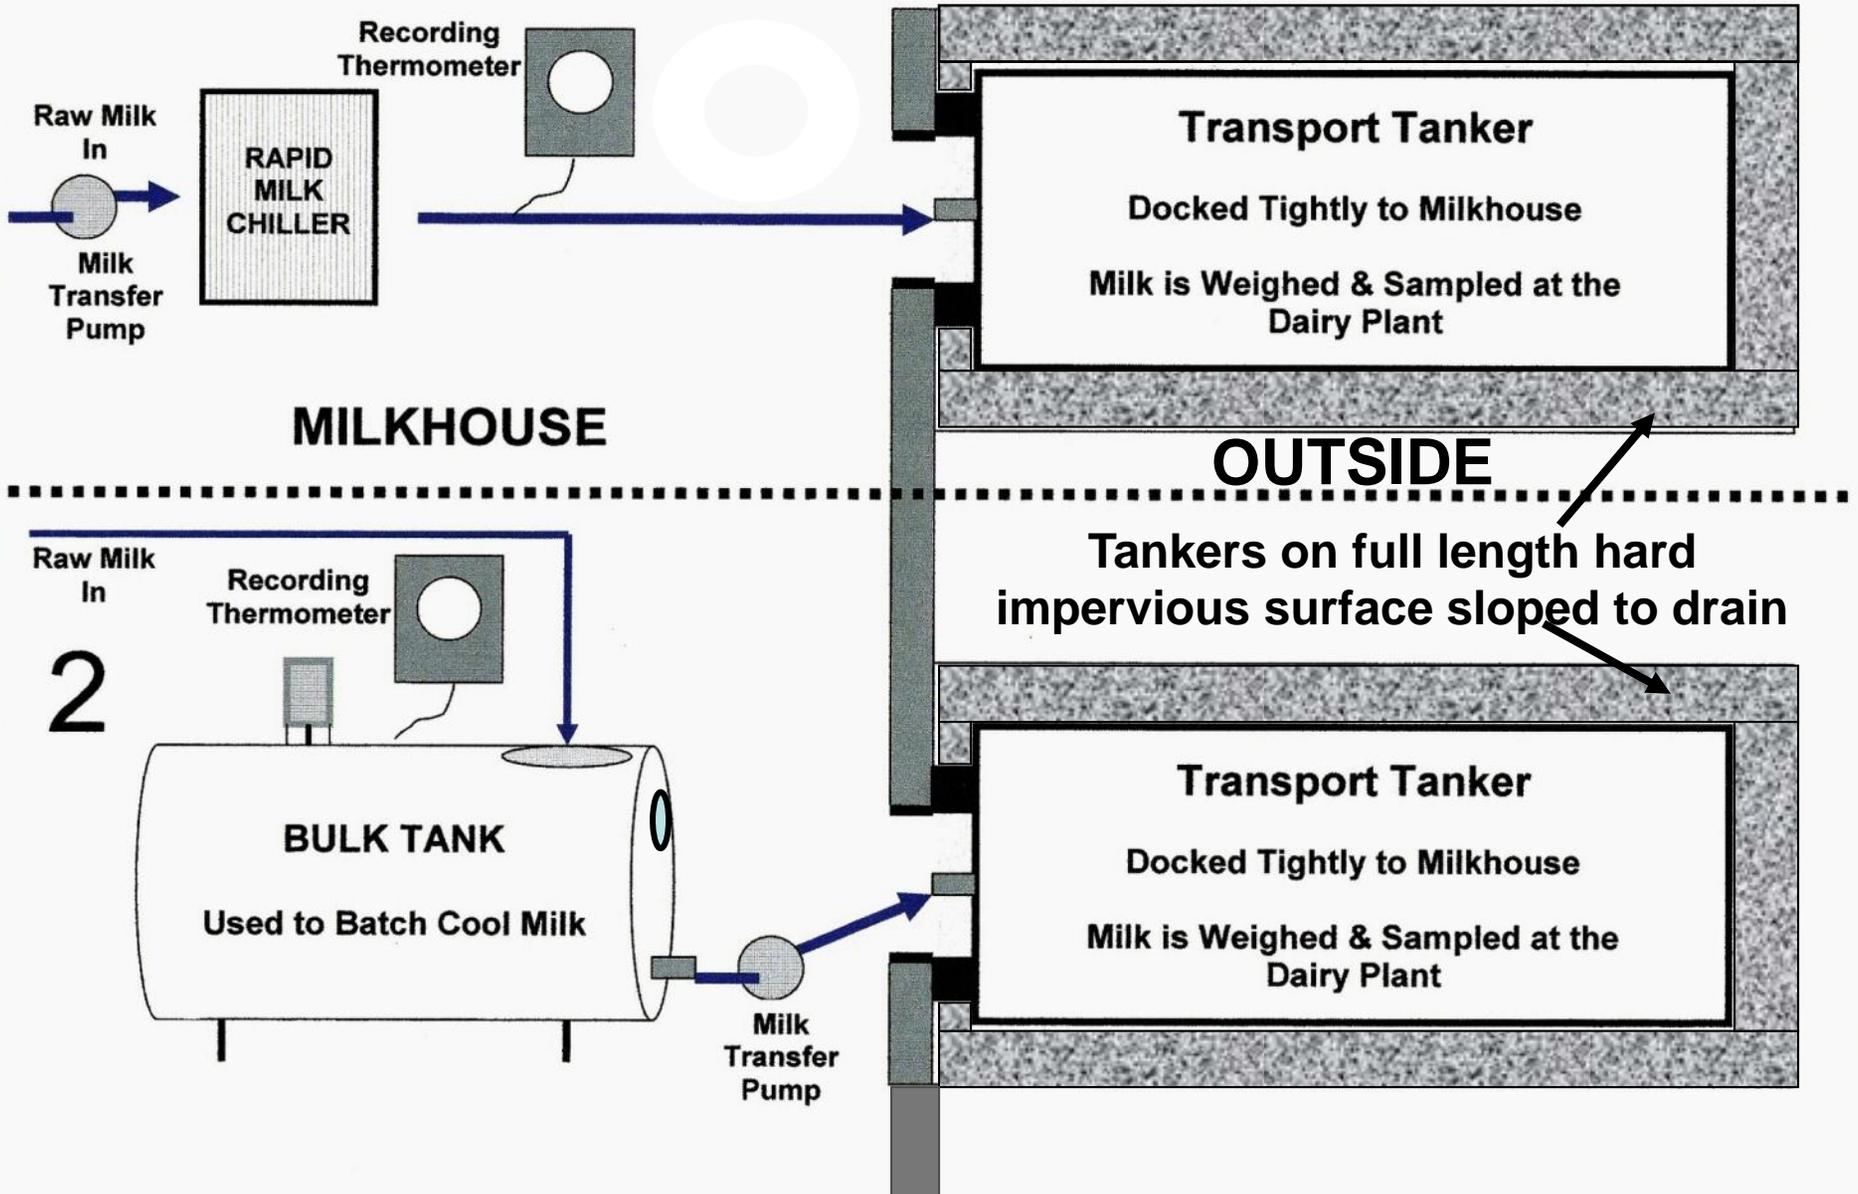

The tanker may be located in an enclosed structure, it must be adjacent to, but not part of the milkhouse. The structure must comply with all milkhouse construction criteria,

Or

The milk tanker is not kept sheltered, and the following special facility criteria applies:

1

# ONLY 2 SCENARIOS THAT CAN BE CLASSIFIED AS DIRECT SHIP TYPE MILKING OPERATIONS

**Tankers Docked Tight to Milkhouse**  
**Parked on Concrete or Equivalent Type Surface**  
**Extends Out Full Length of Tanker**  
**Sloped to Drain**

**Example of a Side Drainage Tanker Pad That Extends Out Only Past the Support Legs**

# Tanker Requirements

- **Licensed as Wisconsin Bulk Milk Tanker**
- **Meets 3-A requirements (3A 05-15)**
  - Construction, Finish, Insulation, etc
- **Outlet valve close-coupled**
  - < 2 pipe dia in length, never > 5"
- **Valve located in cabinet or under effective dust cover during transport.**
- **Access cover is sealable**

# Tanker Access Ports Covers Sealed Immediately After Washing

Tankers to be Washed at the Dairy Plant or at a Properly Permitted Wash Facility

**PMO: Milk tank truck shall be cleaned and sanitized prior to use. When time after cleaning and sanitizing >96 hours the tank must be re-sanitized.**

# The Tanker Outlet Valve Tightly Docked to the Milkhouse

**Durable Non-Absorbent  
Dock Seal Bumpers  
Surround Entire Opening**

**Reinforced Tanker Stop Posts**

**Keep area clean & trim  
grass/weeds**

## **A Tight Connection to the Milkhouse is Required:**

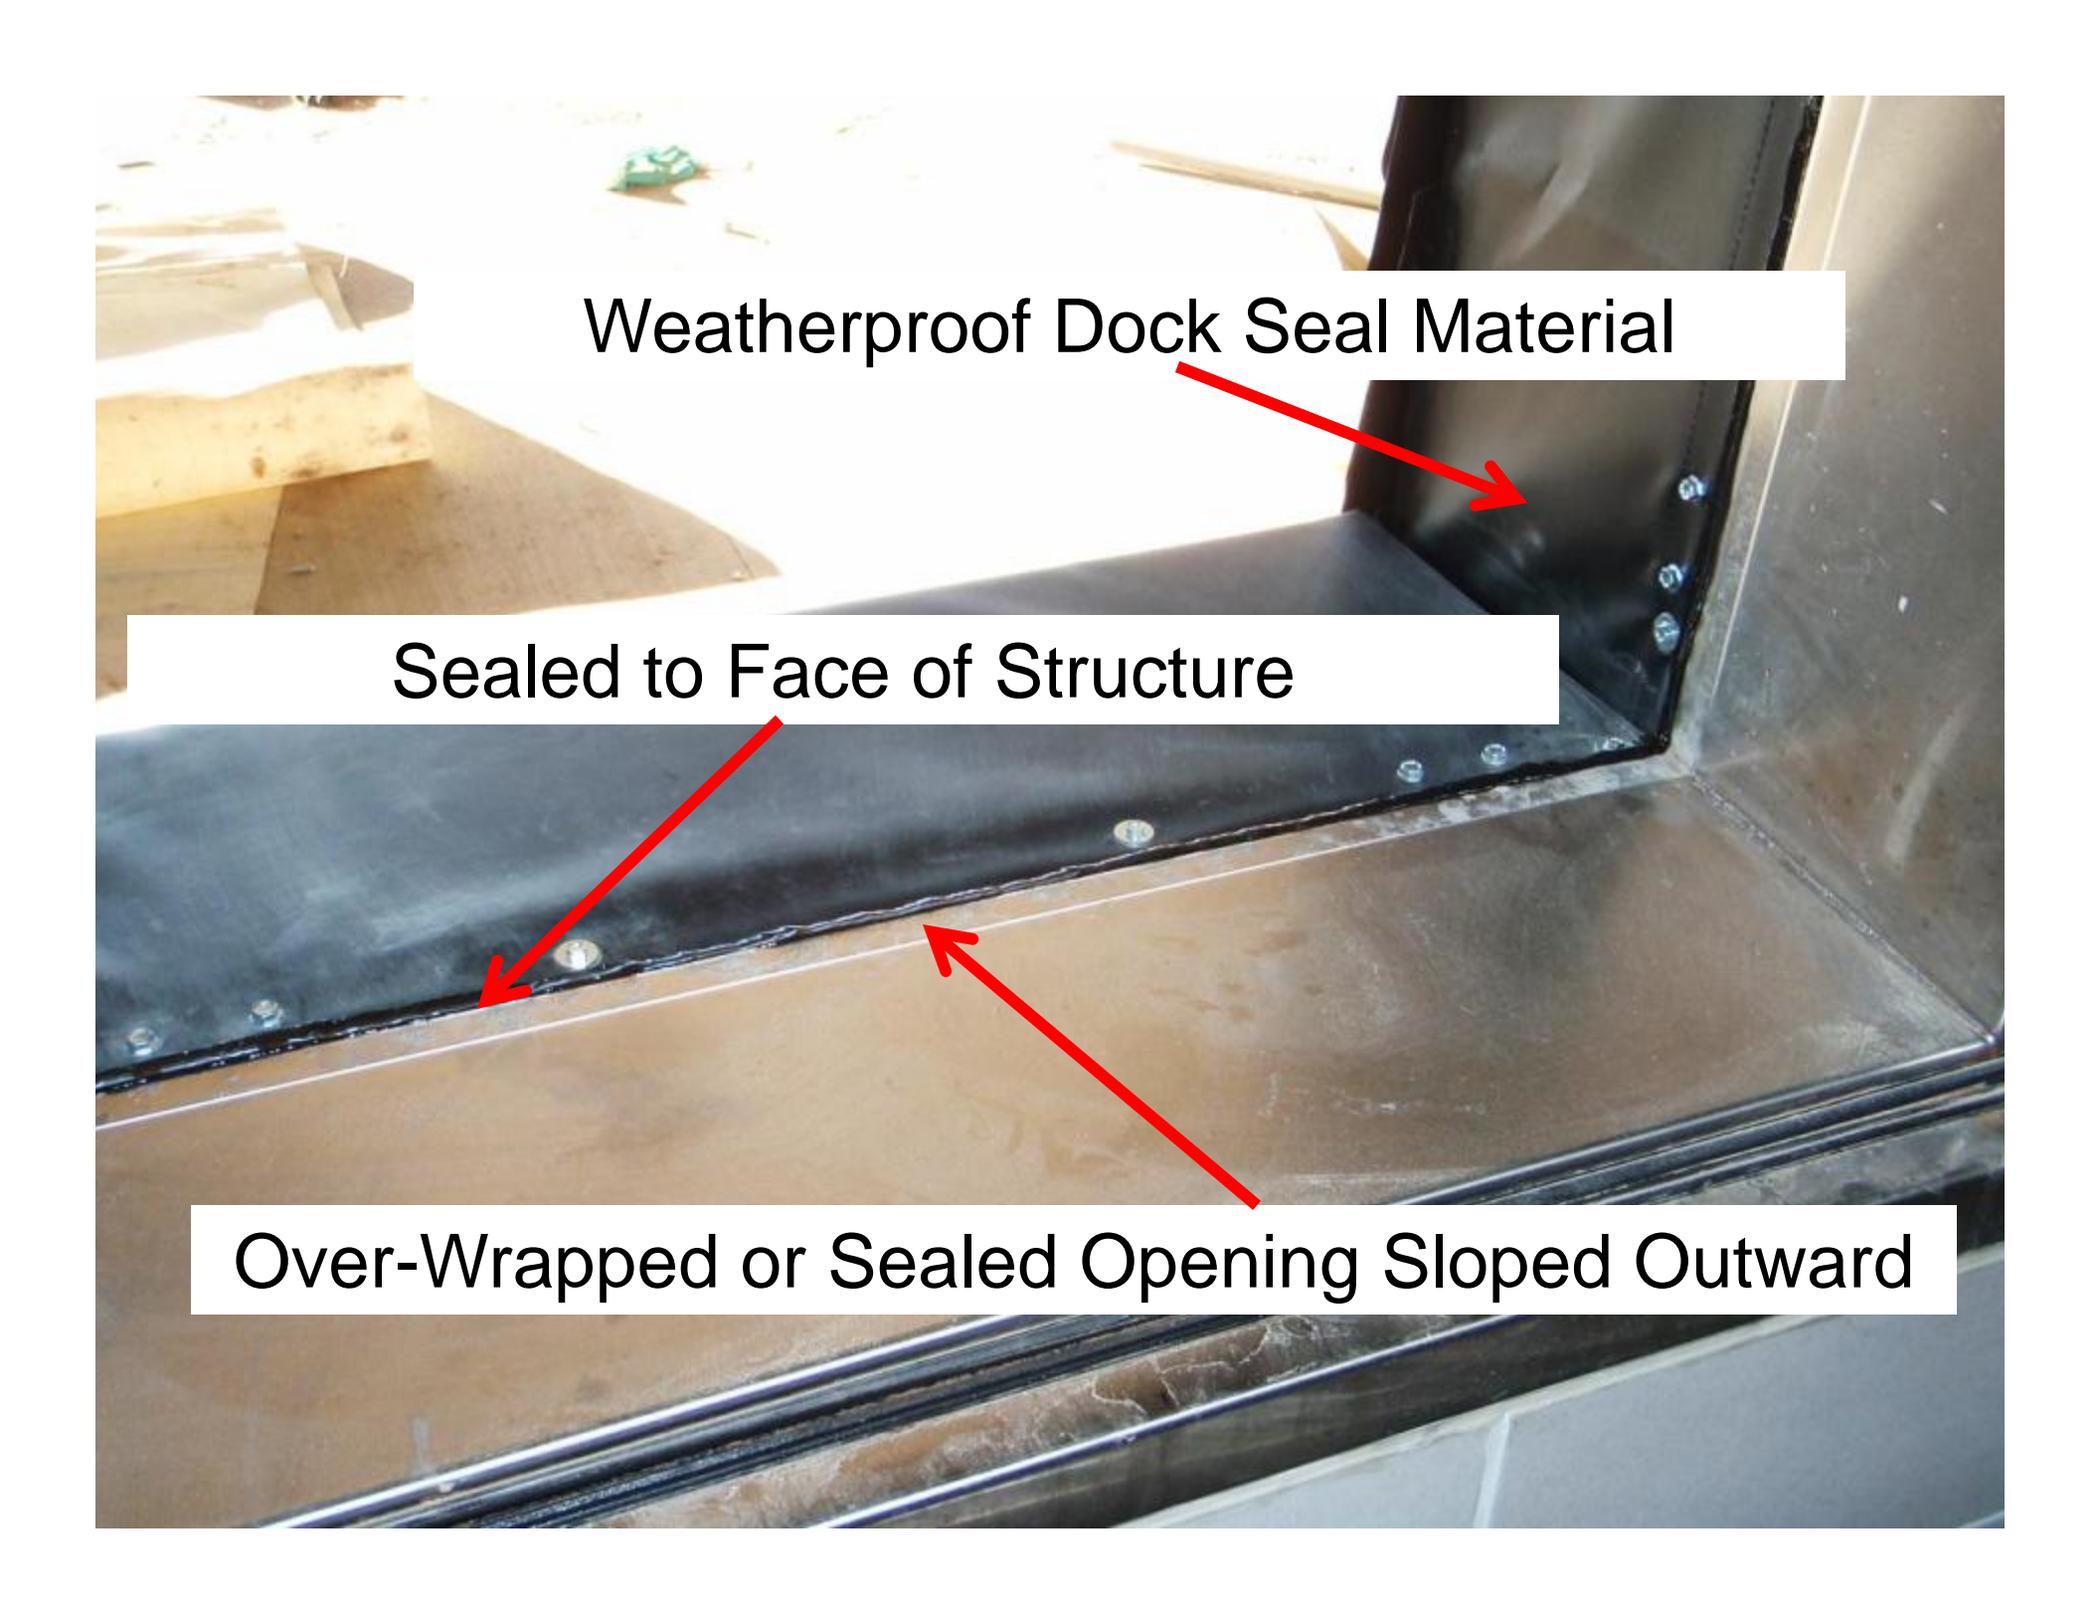

- May Require Tanker Modifications to Create Tight Seal**
- May Require Extra Material to Fill in All Gaps**
- All Tanker Modifications to Meet Sanitary Design Criteria**

# Direct Shipment of Milk

- The outlet valve must be capped and the dust cover shall be in place, or the cabinet doors shall be closed whenever the tanker is not docked tightly to the milkhouse.

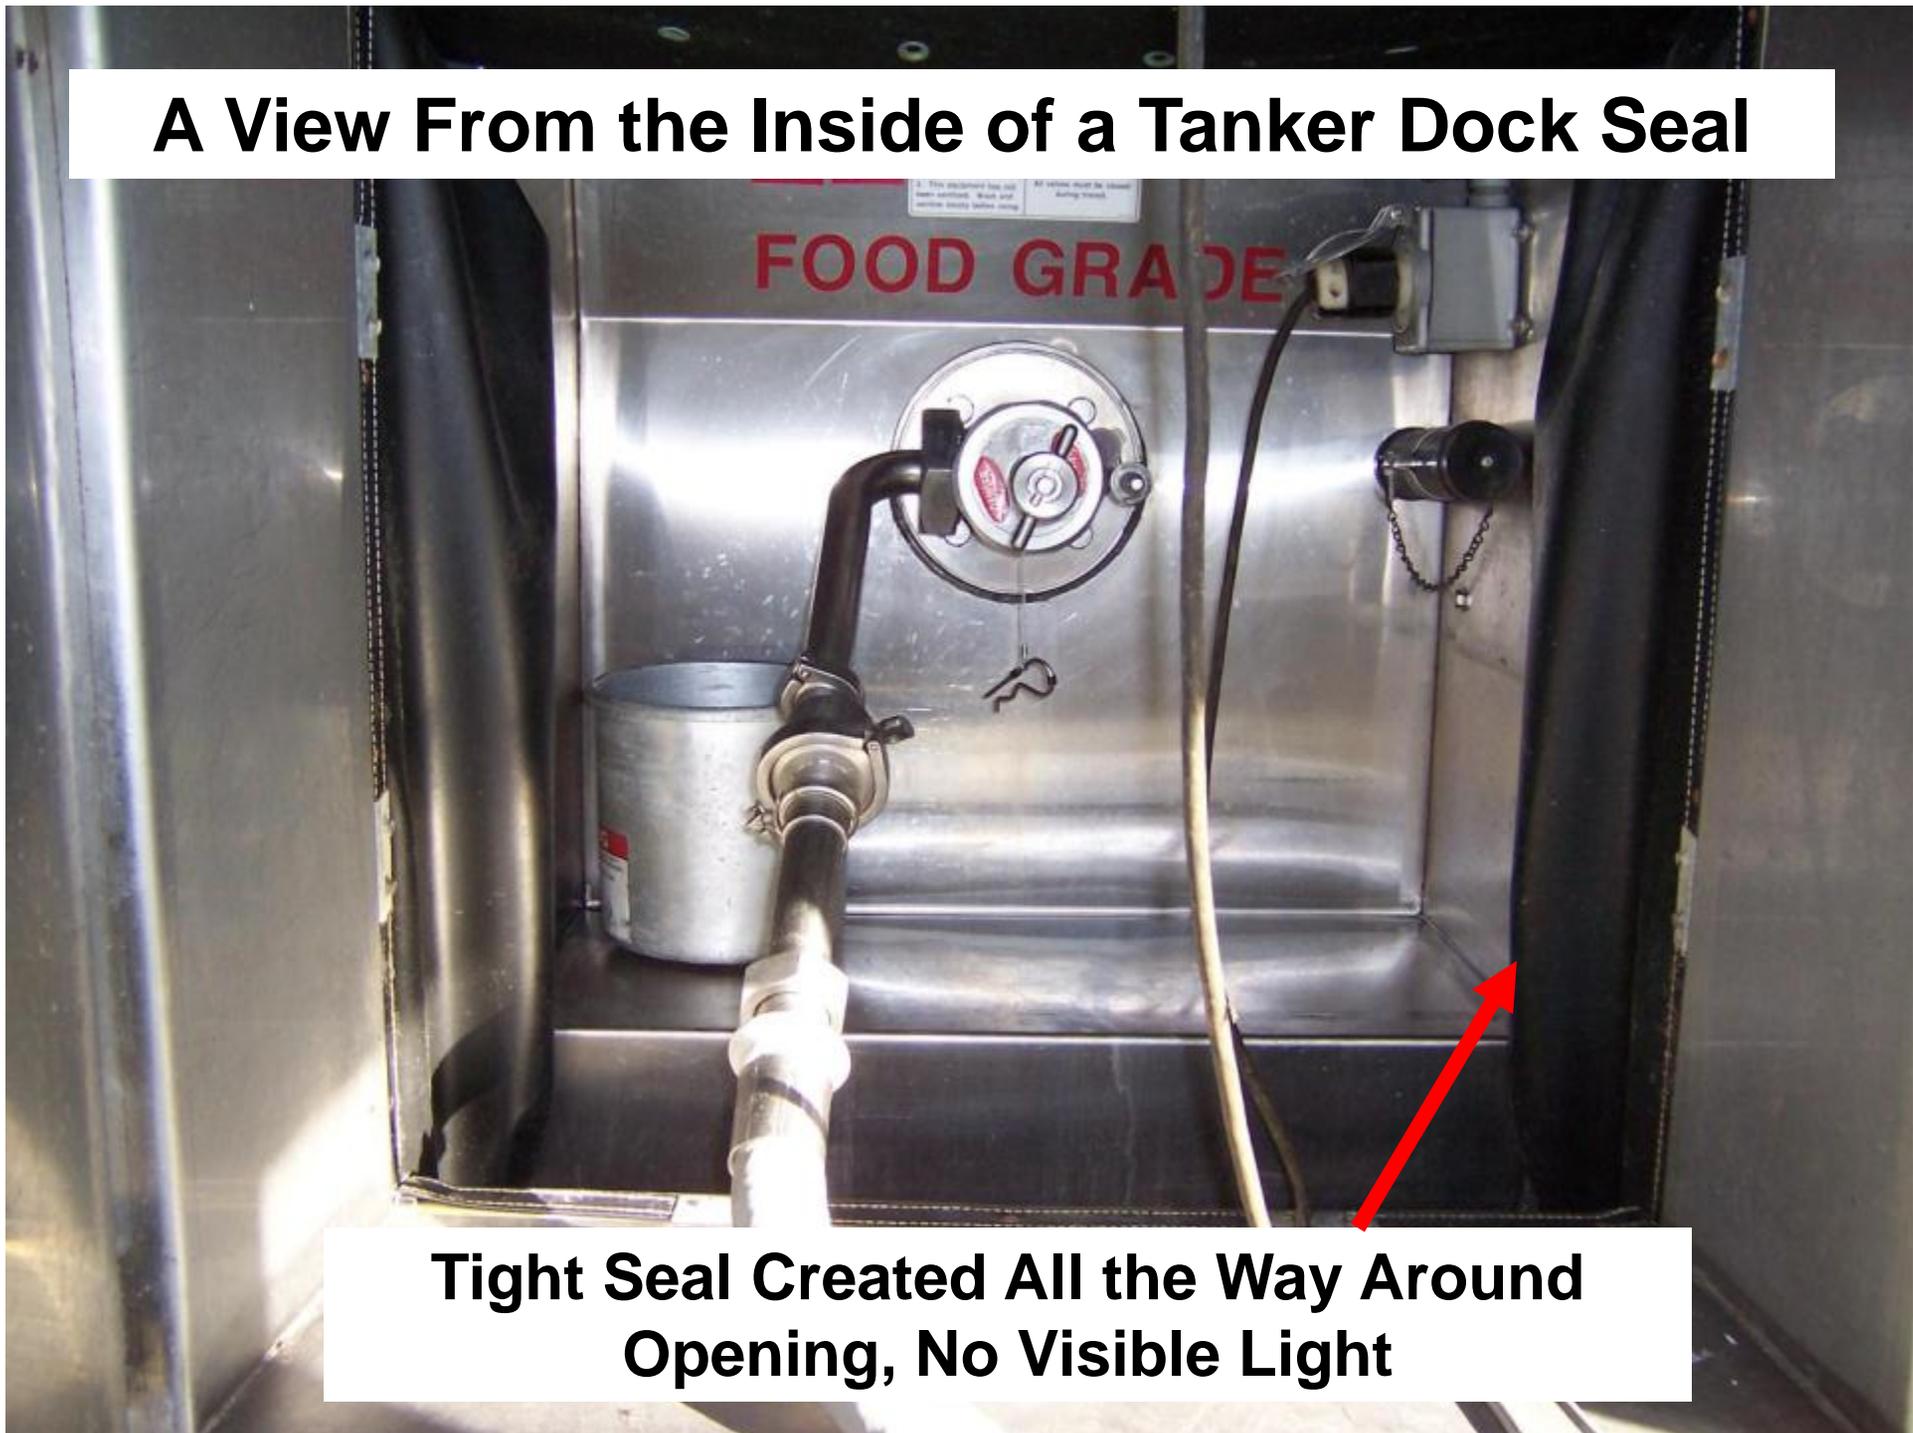

A close-up photograph showing a black weatherproof dock seal material being installed on a structure. The seal is a thick, flexible strip with several silver bolts or rivets along its length. It is being applied to a light-colored, possibly aluminum or steel, surface. The seal is being wrapped around a corner of the structure. Three red arrows point from the text labels to the seal material and the structure. The background shows a construction site with wooden planks and other materials.

## BRAND NAME

PROPYLENE GLYCOL - USP

<b>GENERIC NAMES</b>	1,2 propanediol
<b>DESCRIPTION</b>	A relatively nontoxic liquid that is practically colorless, odorless, and tasteless.
<b>APPLICATIONS</b>	A solvent for flavors, extracts, drugs, and food antioxidants; a heat transfer medium; an emollient and humectant and plasticizer for tobacco products, baked goods, coconut, cellophane, cork, adhesives, and paper products; a lubricant and mold inhibitor for food processing equipment; a humectant for pet food.

---

### SALES SPECIFICATIONS

**This product meets the requirements of the Propylene Glycol monograph listed in the United States Pharmacopoeia (USP), latest edition, European Pharmacopoeia (EP), and Food Chemicals Codex (FCC).**

## **There Are Many Acceptable Line & Hose Configurations to Deliver the Milk to the Tanker Bays**

- Lines Must Slope to Drain**
- Be Securely Mounted**
- Hoses Must Be Adequately Supported To Completely Drain**

**Hose Section  
Supported By A  
Stainless Steel  
Trough To Maintain  
Proper Slope**

9.9.2003

**All milk transfer systems are to be designed to use the shortest length of hose as possible.**

**Install sanitary stainless line that is properly supported and sloped to drain.**

**In This Configuration the Hoses Are Held In a Vertical Position as a Part of the CIP Loop**

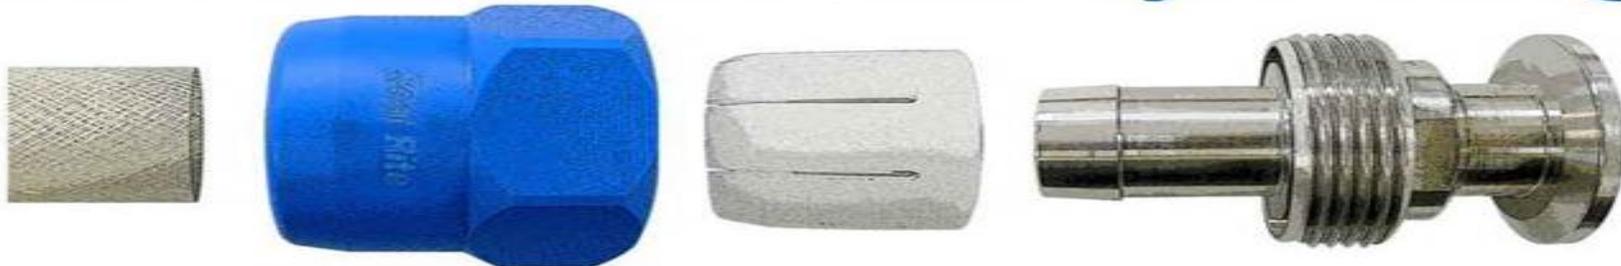

**All Hoses Used In the Milkhouse Need to be the Type Approved for CIP Cleaning,**

- 025 = 1/4"
- 037 = 3/8"
- 050 = 1/2"
- 062 = 5/8"
- 075 = 3/4"
- 100 = 1"
- 150 = 1 1/2"
- 200 = 2"
- 250 = 2 1/2"
- 300 = 3"
- 400 = 4"
- 600 = 6"

## Pre-molded on end fittings seamless sanitary hoses

## Reusable Sanitary Fitting

PART NUMBER	HOSE SIZE	CLAMP SIZE	O.D.	I.D.

# Equipment Storage

- **Transfer piping or hoses and tanker cabinet valves shall be capped when not in use.**
- **Caps shall be stored in the milkhouse during milking and cleaned & sanitized before each use.**
- **Transfer hose(s) must be drained and properly stored in the milkhouse.**

**Butterfly Valves Are Acceptable Only When They  
Are Readily Accessible For Inspection & Hand  
Cleaning**

**Wing Nut Fasteners Are Preferred Otherwise Wrench to be  
Available**

**Position Valves to Eliminate Long Dead Ends**

8.31.2005

**Spring Clip Type Check Valves Need to be Hand Cleaned**

# Sanitary Type Check Valves

These types of check valves can be cleaned in place and should be used in applications where routine disassembly is not practical.

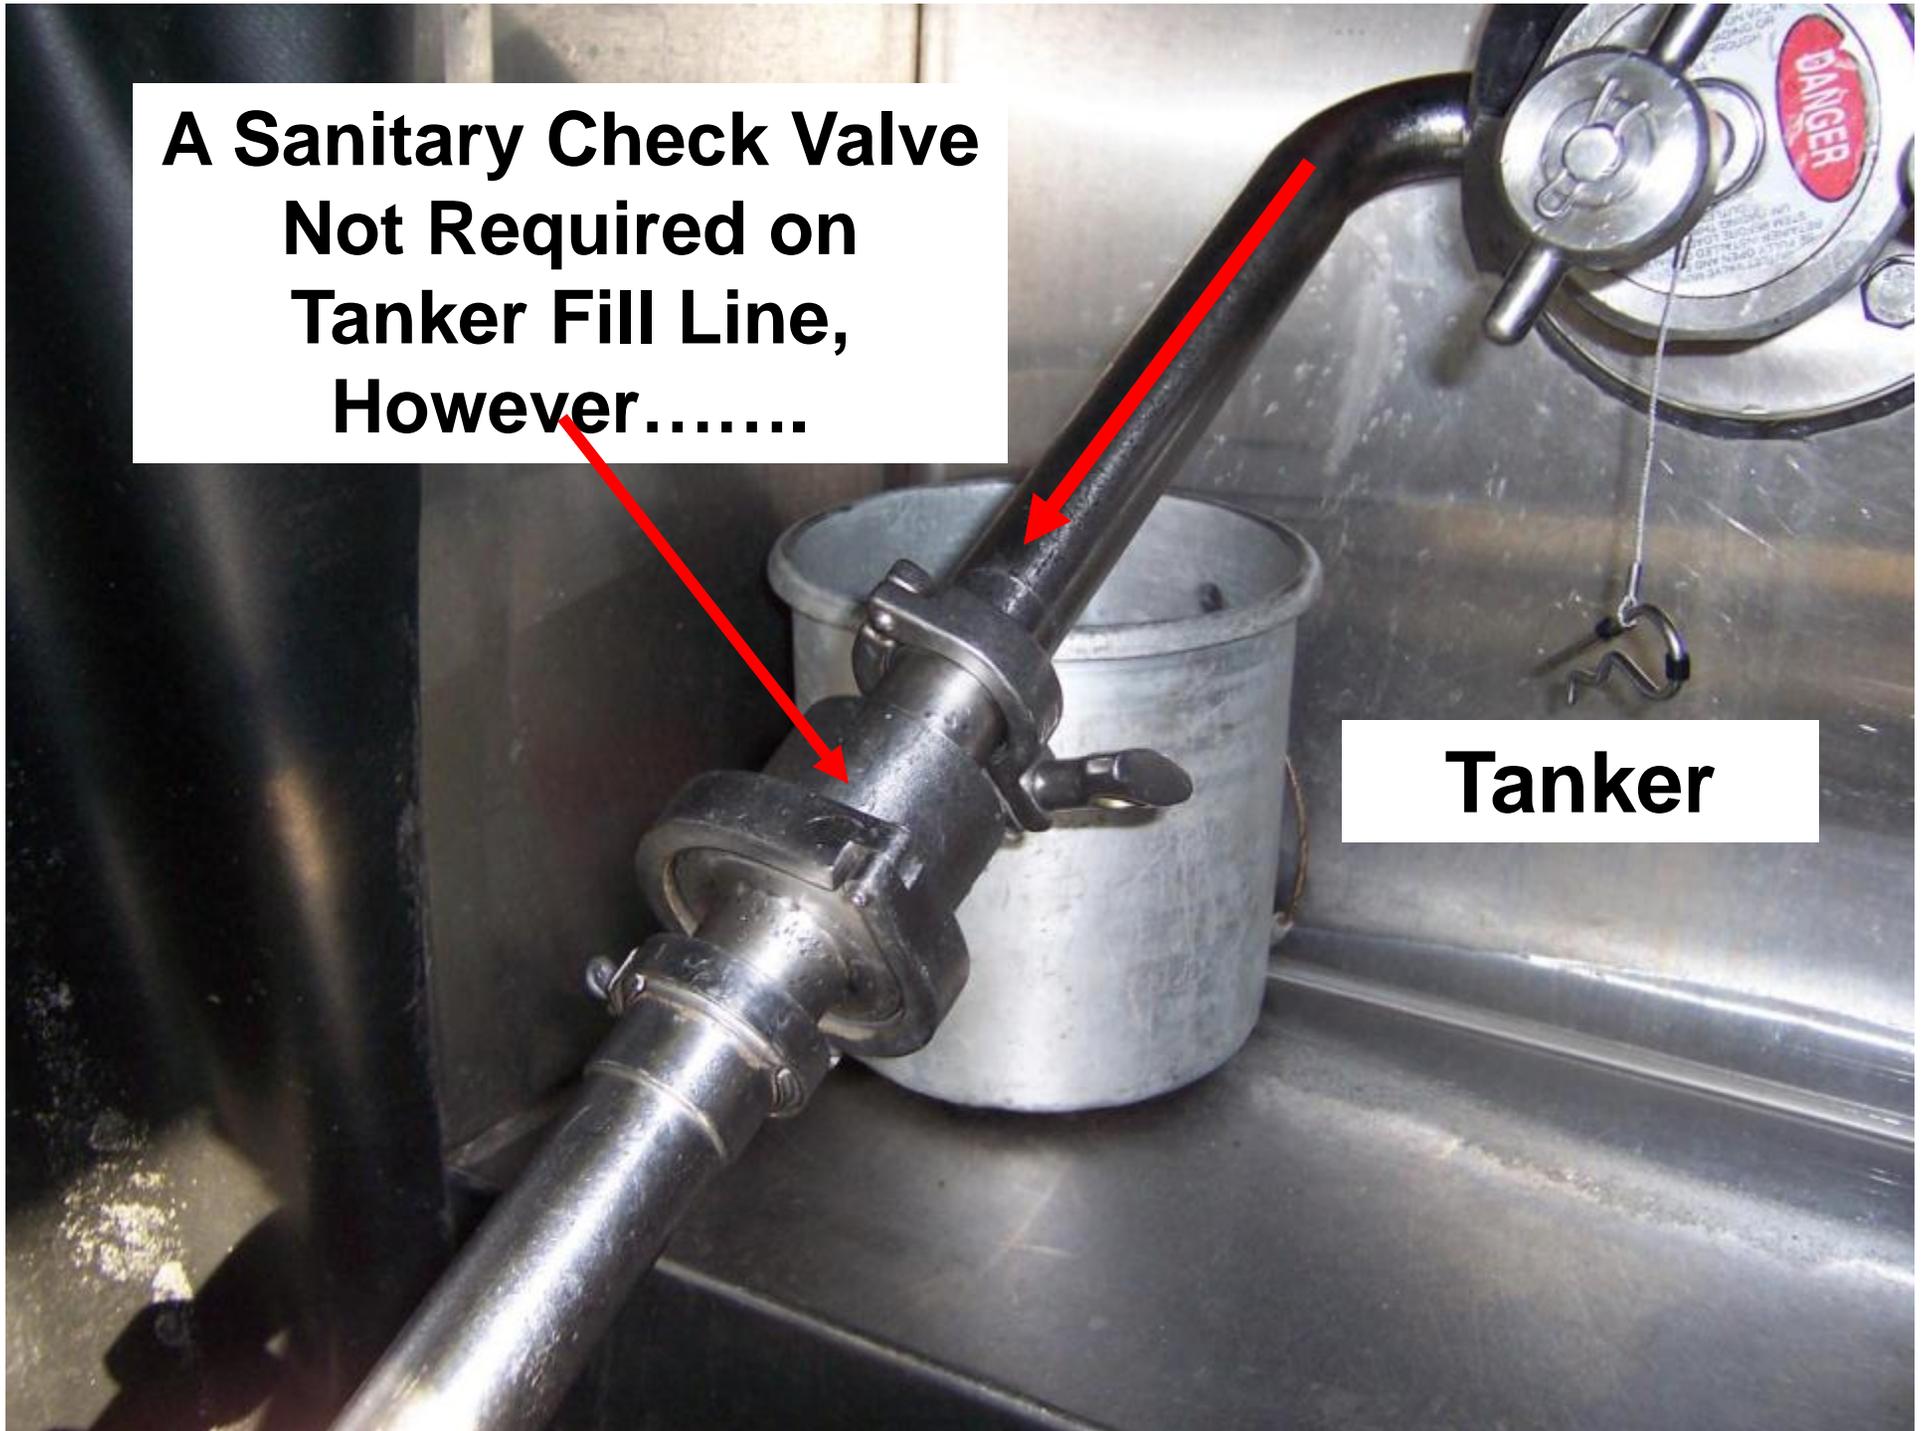

**Vertical mount only for proper drainage** (unless specifically designed)

**Can be mounted vertically or horizontally**

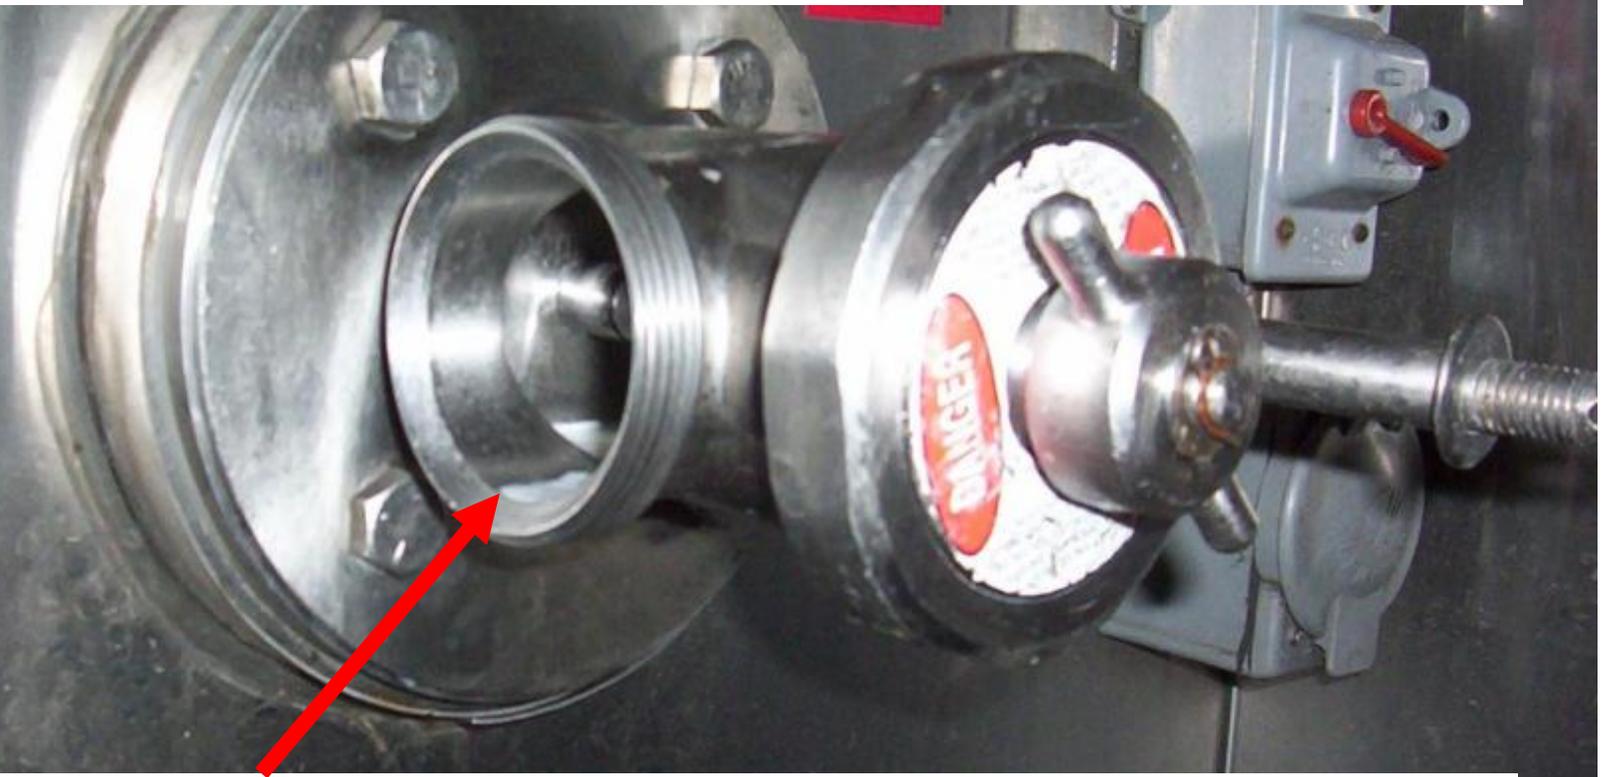

(check ball cavity must face upward)

**A Sanitary Check Valve  
Not Required on  
Tanker Fill Line,  
However.....**

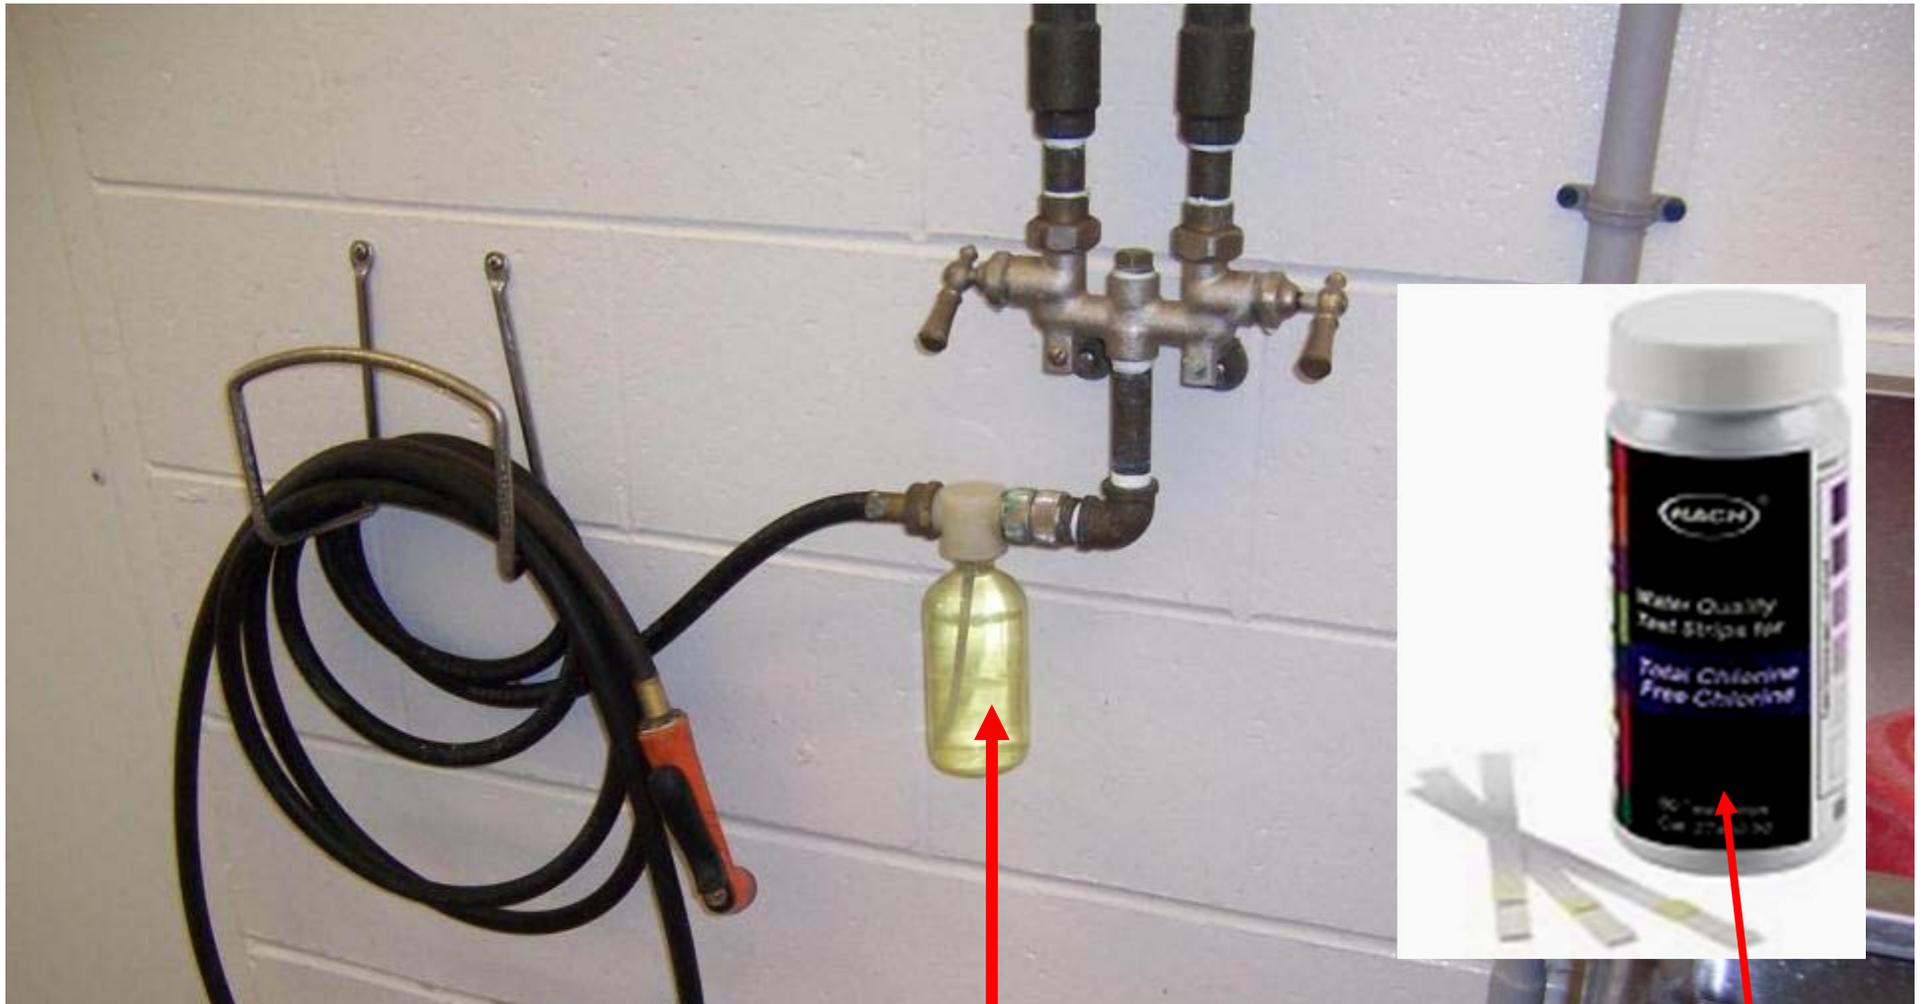

**Tanker**

**Tanker Valve Close-Coupled to Tank to Maintain Proper Product Temperatures.**

**The tanker outlet valve is to be cleaned & sanitized after each use and then covered with a sanitary cap.**

29/09/2005

**A Sanitizing Hose Station Like This Should be Conveniently Located to Reach All Tanker Bays**

**Provide Method of Testing Sanitizer Strength at Hose End to Assure Its Effectiveness**

# Cleaning Requirements

- Tanker outlet valve washed & sanitized prior to connecting the transfer hose.
- Cooling device(s) & transfer hose cleaned & sanitized after each use or at least once every 24 hours if milking continuously.
- FDA recommends a maximum of 72 hours of milking before tanker delivers to dairy plant.
- Limited to only 2 days if milk violates ATCP 60.15 quality standards (82.10 (1))

# Dairy Plant Procedures

- **Sampling**

- **Drug Residue Screen (Every Load)**

- **Quality Testing (Official)**

- **Licensed Bulk Weigher & Sampler**

- **Following proper agitation** (To ensure a homogeneous product establish an agitation protocol in compliance with Standard Methods for the Examination of Dairy Products, Section 3.042 B.)

- **Appropriate sampling location**

- **Record temperature of load**

- **Duplicate copy of weight collection**

- **Posted at farm (following day)**

# Dairy Plant Procedures

- **Weighing**

- Establish a weighing method that meets the criteria outlined in ATCP 92, Wis. Adm. Code, (Weights and Measures Rule).
- Truck Scale, Meters, etc
- Recommend signed agreement between parties

- **Agitation**

- Mechanical or Air Agitation
- Reviewed by regulatory for sanitary design & construction as part of the application process.

## **2011 PMO Language 5r Page 40**

Provided, based on Regulatory Agency acceptance, the direct loading of milk from the milkhouse to the milk tank truck may be .....**or** by stubbing the milk transfer and associated CIP cleaned lines outside the milkhouse wall in accordance with .....

**No Provision in Wisconsin Rule for This  
Due to Climatic Conditions**

# Question & Answers

- Overview of the 2010 Q & A
- Highlight of any changes
- 2012 Manual will contain the Q & A from these current training sessions.

# Question and Answers

## From March 2010 Installer Meetings

### Application

#### Automatic Milking Installations

1. Q. How many robotic milking systems are currently installed in Wisconsin?
- A. The division has received 18 applications, with some applications installing more than one robotic milking system.

### Water Systems

1. Q. Can the water line enter the top of the tank as long as it is above the overflow?
- A. Yes as long as the distance between the water inlet and the overflow and overflow size meets the dimensions as specified by the Commerce calculator.
  
2. Q. Where can I get a copy of the Department of Commerce Air Gap Calculator?
- A. The division recommends that you contact the Department of Commerce, Don Hough at [Donald.Hough@wisconsin.gov](mailto:Donald.Hough@wisconsin.gov). This will be available on the Department of Commerce website in the near future.

3. Q. How is the overflow calculator documentation provided?

A. The person performing the calculation should provide the appropriate documentation.

4. Q. Please explain the difference between the PMO requirements and the DFS position on the low pressure cut-off switch for permanently installed high pressure washer

A. The PMO requirements should be the same as the DFS position based on determination by the Wisconsin water control authorities determination of acceptance of the ASSE 1013 RPZ backflow prevention device for this application.

5. Q. Do currently installed permanent high pressure washers using a low pressure cut-off switch need to be upgraded to a reduced pressure zone back-flow prevention device?

A. The ruling from the Department of Commerce calls for the installation of a reduced pressure zone backflow preventer (ASSE 1013).

6. Q. Can pre-cooler water be discharged to the gutter?

A. No, pre-cooler water may be discharged to a manure reception hopper with a proper air gap.

7. Q. How is the reclaimed water for potable purposes protected when an air-gap backflow prevention method is used? Is there an acceptable method to prevent contamination of the reclaimed potable tank when the tank is open at this point?

A. The installation would need to be evaluated on a case by case basis. An air gap may not be the best application, without some form of additional protection.

8. Q. I was under the assumption that once the water left the plate cooler it was no longer potable.

A. ATCP 60.08(7), Wis. Adm. Code and Appendix D, section VI of the 2009 Pasteurized Milk Ordinance (PMO) allow reclaiming water discharged from a plate cooler for potable purposes.

9. Q. Who is responsible for the semi-annual testing of the recirculated water system?

A. The producer is ultimately responsible for all aspects of the milking system.

## Facility Requirements

1. Q. Is it correct that washer and dryers in a milkhouse will be debited on milk rating surveys?

A. Yes, this is correct. However Wisconsin Administrative Code ATCP 60, Dairy Farms does not consider this a violation when used solely for the washing and drying of towels used for udder preparation.

2. Q. Why is there a difference between the state and federal inspection programs on the acceptability of washer and dryers installed in a milkhouse or parlor?

A. This is a difference of inspection philosophy between the two inspection agencies. The Wisconsin Administrative Code ATCP 60, Dairy Farms does not consider this a violation when used solely for the washing and drying of towels used for udder preparation.

3. Q. Do solid doors on the milkhouse need to open outward?

A. Only screen doors on milkhouse need to open outward, solid doors may swing either way.

4. Q. Can utility room air be used in the parlor or milkhouse?

A. Yes, if the utility room is not directly connected to the cattle housing or parlor areas.

5. Q. May the rear of a bulk tank be placed directly against the wall?

A. Yes if properly sealed and all other distances are adequate for inspection and cleaning of the facility.

6. Q. Does the method of physical disconnect for a bulk tank washer need to meet any certain standard or material?

A. Soft metal fittings such as brass fittings are not permitted and deteriorate overtime from contact with the cleaning chemicals. A plastic fitting or other noncorrosive materials designed for contact with cleaning chemicals is required.

7. Q. May a milkhouse waste be allowed enter the gutter in flat barn parlor?

A. Waste water shall not be accessible to the cattle so the waste water shall be plumbed directly to a reception hopper or other approved waste disposal system.

## Equipment Concerns

1. Q. Is an electronic thermometer permissible for a replacement bulk tank thermometer?

A. Yes

2. Q. Are there any differences between hospital milking parlors and parlors used for milking production for human food?

A. Hospital milking systems are not inspected since the milk is not sold for human consumption. Ensure the farm water supply system is not exposed to cross-connection or other forms of contamination.

3. Q. Must a ball style check valve be installed in only a horizontal position?

A. A vertical or horizontal placement is acceptable when installed in accordance with manufacturer's recommendations.

## Direct Tanker Requirements

1. Q. Is it permissible to agitate the milk tanker on the farm?  
A. Milk must be agitated at the point of sampling, without an approved sampling facility this could not be done at the farm.
  
2. Q. Can air be used for agitation of tankers?  
A. Yes air can be used if the method uses air of sanitary quality and it meets the current Standard Methods for the Examination of Dairy Products for milk agitation.
3. Q. How long after agitation must the official sample be taken?  
A. The sample should be taken as soon as possible after agitation. Refer to the Standard Methods for the Examination of Dairy Products.
  
4. Q. How is temperature verification done on a direct ship?  
A. It is recommended that the temperature probe be installed in a sanitary well that allows for removal during production and checked on ice for accuracy.

5. Q. What is the recommended procedure for the field representative to verify the temperature accuracy if there is only one probe?

A. Either by placing the check thermometer in adjacent thermometer well or by removing temperature sensor and placed on ice to verify accuracy against the check thermometer.

6. Q. Who is responsible for cleaning the bulk milk transport tank?

A. The bulk milk tanker operator is responsible for cleaning and sanitizing the transport tank. A written agreement is recommended that outlines the specific responsibilities of each party involved in the transport and cleaning of bulk milk transport tanks.

7. Q. How long can a producer milk into a tanker?

A. Based on ATCP 60.17, Wis. Adm. Code the producer may milk into the tanker indefinitely as long as the milk does not violate the quality standards outlined in ATCP 60.15, Wis. Adm. Code, which would then require collection of milk every 2 days. The PMO allows milking into the tanker up to 72 hours.
